The Lighting Bible®

FIFTEEN

DELTALIGHT®

We are Delta Light

Let’s journey into the world of Delta Light with **the Lighting Bible 15**. Let’s journey into the world of Delta Light with the Lighting Bible 15. Get inspired by new product families, innovative integrations and technical advancements. This illustrated catalogue is a testament to our craft, where light and creativity collide. Lighting Bible 15 bridges the gap between print and digital. This book will give you a deeper understanding of our architectural lighting solutions, as well as access to more technical information presented through sketches and informative tables.
In need of a visual representation with fitting project photography? Seamlessly switch to our website via QR-codes and visual cues. We provide everything you need: **create on paper, imagine online.**

NEW DELTA LIGHT WEBSITE
In the ever-evolving digital landscape, we at Delta Light find better ways to service our customers. A well-designed website can serve as a powerful tool to piece together your architectural narrative or design project.
By reducing the use of printed materials and focusing on potent digital tools, we are adjusting our course to more sustainable communication channels. We believe it is more than just a trend- it’s a crucial step on our path towards a sustainable future.
The latest version of our website has many helpful functionalities. Gather inspiration via the effective search function, collect your favorite projects and products with pins and share them with whoever you want. It is super easy to cross reference technical data from the Lighting Bible to applications on the new website and vice versa.
With this new **synergy between online and offline** we provide a comprehensive and easily accessible toolset for our clients, helping them to bring their visions to life and make their mark on their world.

welcome to our world.

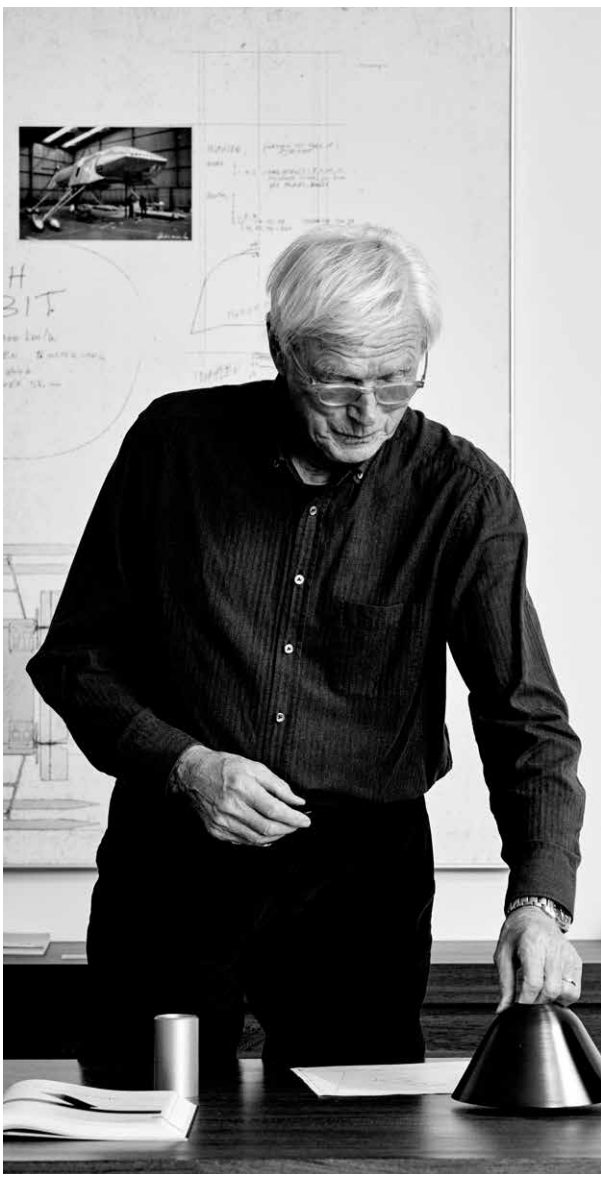
We develop lighting solutions to improve people's quality of life. We offer our lighting expertise to architects, interior designers and lighting designers to help them achieve their vision and create a lighting display that integrates into the architecture. Using the right lighting, in the right way enhances and complements architectural concepts.

We strive to be the best in everything we do. With our extensive experience in product development, manufacturing, and design, we approach the future of lighting with ambition and confidence. We continuously invest in people, new markets, production technologies and our infrastructure. And we do this to improve our service; expand our R&D department, test facilities and laboratory; increase the level of warehouse automation and expand the House of Light training center. We like sharing our passion, creativity, and dedication. Our aim is to inspire people all over the world. As a family business, we have a personal stake in making your project a success.

we make light

Paul Ameloot
Entrepreneur Visionary Designer

Paul Ameloot created Delta Light in 1989 in the Belgian city of Roeselare, achieving his dream to design and manufacture architectural lighting. This local success story soon went global, with the participation in international events from the get-go. Today Delta Light is active on all continents, but still honors its local roots.
“I started out designing and developing all products myself. Even though today we have a team of 35 engineers, I still contribute my vision and ideas. Because once a player, it’s hard to become a fan sitting on the bench at the side of the pitch and watching the game. My dream – that was made possible by working together with my wife Katrien – really came true. Our sons, Peter and Jan, continue to make that dream grow.”



Paul Ameloot

Entrepreneur Visionary Designer

Purity is key in this latest edition of The Lighting Bible. You will find pure lighting pleasure deep in the core of our DNA, it is our leitmotif.

The Lighting Bible 15 brings you a collection of pure lighting experiences with a language of its own to enhance the human experience of architecture and nature. Our luminaires offer the building blocks for unique creations of brightness, atmosphere, and emotion.

Sophistication in technology, and purity in design unite in our collection. We offer lighting that pushes the boundaries of technology and engineering, whilst bringing a feeling of comfort, elegance, excitement and purity. Explore our complete collection of lighting solutions and experience pure lighting pleasure.

pure lightinc

a pleasure.

Light that makes you see.

Light that makes you look.

Light that animates the world, around you.

Global

Since 1989, we have grown from a small Belgian company toa global business that offers lighting solutions and services in 120 countries worldwide.

In addition to the Belgian headquarters we have Delta Light branch offices and partners on all continents and in key design capitals, from Sydney to New York, Amsterdam, Bogota, Hong Kong, Copenhagen, Miami, London, Milan, Cape Town, Los Angeles and many more.
Our goal is to support the international projects personally and locally.

Delta Light caters to some of the world's most well-known brands and architects, providing sophisticated and value add lighting solutions to residential, office, hospitality, retail, landscaping, showroom, and public projects. From small to super large scale, Delta Light has the product range, experience, and knowledge to meet the functional and aesthetic needs of your projects.
Each project requires a customised approach, and as such Delta Light recognises this with an exceptional package of services and design tools. Our global team works with all stakeholders involved to achieve the best possible results.

Starting with initial concept lighting support to the installation process and project follow-up, and everything in between. Be il for technical or application questions, performance and energy saving studies, custom designs, and made-to-measure solutions, rendering or graphics, or any other lighting support needs ... Delta Light provides a one-stop-shopping solution for your projects.

Jan & Peter Ameloot
CEO’s

Lighting spaces, indoor and outdoor
Delta Light stands for a high-quality range of contemporary architectural interior lighting solutions. A legacy we carry with pride and that we will continue to build upon with determination. From residential to hospitality, whether small or large, Delta Light has the technical expertise, product range, and practical experience to meet both the functional and aesthetic requirements of your interior project.

For the past 20 years we have been expanding our Delta Light outdoor range. We can proudly say that all that effort, and the vision behind it, has resulted in an extensive and complete range of Delta Light outdoor luminaires. These lights are of high quality and the product excellence is evident in the sublime lighting experience, enhanced durability and state-of-the-art finishes. More than ever, we are determined to make our outdoor range as renowned as our indoor range, based on the same pillars: contemporary design, excellent quality, innovative product development and a solid production and finish.

lighting spaces

R&D

The lighting industry is constantly evolving, providing both challenge and opportunity.
It fascinates us to keep on bringing new designs and lighting solutions to the market. You could consider it a passion to continuously surprise and inspire people with new lighting languages.
An essential attribute in Delta Light's creative process is the extensive in-house design, development, testing, engineering, and manufacturing of all products. This enables us to achieve our short idea-to-market philosophy, resulting in extensive new collections being launched on a regular basis.

Our in-house design team crafts cuttingedge lighting solutions, that combine an architectural design language, a minimalist approach, and a boldness that challenges the boundaries of technology.
In-house design is the foundation of our product portfolio, but we also love to collaborate with architects and designers, from different industries to create and innovate.

Delta Light's extensive design and R&D teams are constantly discovering future trends, both in terms of design and use of materials, whilst remaining focused on the power of imagination.
Its creative statement is supported by the opinion of expert panels, resulting in prestigious awards lor our collection of products, including IF Design Award, Good Design Award, Red Dot Design Award plus many more ..

We are focused on the detail. The looks, how a fixture moves, how it can be specified and installed, the ease of enjoying the light and so much more. With a surprising visual simplicity, our products are the result of extensive research and testing, fusing advanced technology with timeless design and sustainable materials.

CONTINUOUS RESEARCH & INNOVATION

Delta Light has been at the forefront of lighting technology for over 30 years now, and we continue to push boundaries, both in interior and exterior lighting. Our investment in R&D, production and innovation aims to deliver outstanding luminaires, blending contemporary design with high-quality materials, advanced engineering, the very best performance and a long lifespan.

CUTTING-EDGE LED TECHNOLOGY

As luminaire designers and manufacturers, we always strive to create the best possible thermal conditions in the luminaire, to ensure the LEDs operate at their optimum. From the design of the LED circuit boards and heat sink, to the selection of materials, to the assembly process and installation techniques ... everything is engineered to reach optimal life expectancy and maximum efficiency.

in-ho
des

By partnering with the best LED suppliers in the world, we ensure a consistent LED selection with colour uniformity across all product ranges. A minimum of MacAdam Step 2 is standard throughout our collection, whilst many of our new collection LEDs offer MacAdam Step 1.

CERTIFIED LABORATORY TESTING

Product quality and safety testing within our Delta Light laboratory conform to the International Electrotechnical Commission standards. The close cooperation and CTF stage 3 acceptance with our certifying partners SGS-CEBEC and INTERTEK leads to CE, ENEC and CB certifications for European and IEC member countries www.members.iecee.org/
Our laboratory also covers the certification of products for the North American market by being certified as a level 4 satellite laboratory for INTERTEK.
This allows us to efficiently obtain the cETLus listing tor our standard North American product range and provide exceptional service for even the most demanding customer specific solutions.
www.intertek.com/directories/etl-listed-mark/

ADVANCED OPTICS

Delta Light's team of engineers and optics experts are on a continuous quest to match the company's credo tor design with energy-efficiency and optimal quality of light. Delta Light's collection is ready to meet the needs of today's architecture, interior and landscape design, and to illuminate with impact.
We offer different precision light distributions to fulfil various requirements, with high uniformity, for demanding applications. CAD-engineered and precision manufactured lenses deliver a tightly controlled light distribution.
The variety of optics, beams and other features enable designers to meet the various illumination needs.

ouse
sign

STATE OF THE ART DEVELOPMENT TECHNIQUES

An important feature in Delta Light's creative process is the use of state-of-the-art development techniques. The intensive use of 3D printing, early stage FMEA (Failure Mode and Effect analysis), goniophotometer measurement and an in-house third party recognised lab (SMT/CTF/ satellite data acceptance) result in a fast, efficient and 'first time right' development process. As such, it is an essential attribute in the company's short idea-to-market philosophy. Throughout the entire production process Delta Light distinguishes itself by handling the strictest quality parameters, to ensure products and services are designed and produced to exceed customer requirements. Every step in the production process has a routine quality procedure, covering both product quality and testing. Every single product that leaves Delta Light, has been inspected and tested thoroughly, resulting in minimal returns and maximum efficiency.

HIGH-OUALITY

Delta Light's proprietary process creates luminaires for both indoor and outdoor use. The quality of the outdoor range is based on the five factors, including basic materials, pre-treatment, powder coating, hardware, and process control. The company uses selected alloys for the lowest grade of corrosion-inducing contaminants. Stainless steel components are made in 316 grade, a steel composition that ensures medical-grade corrosion resistance.

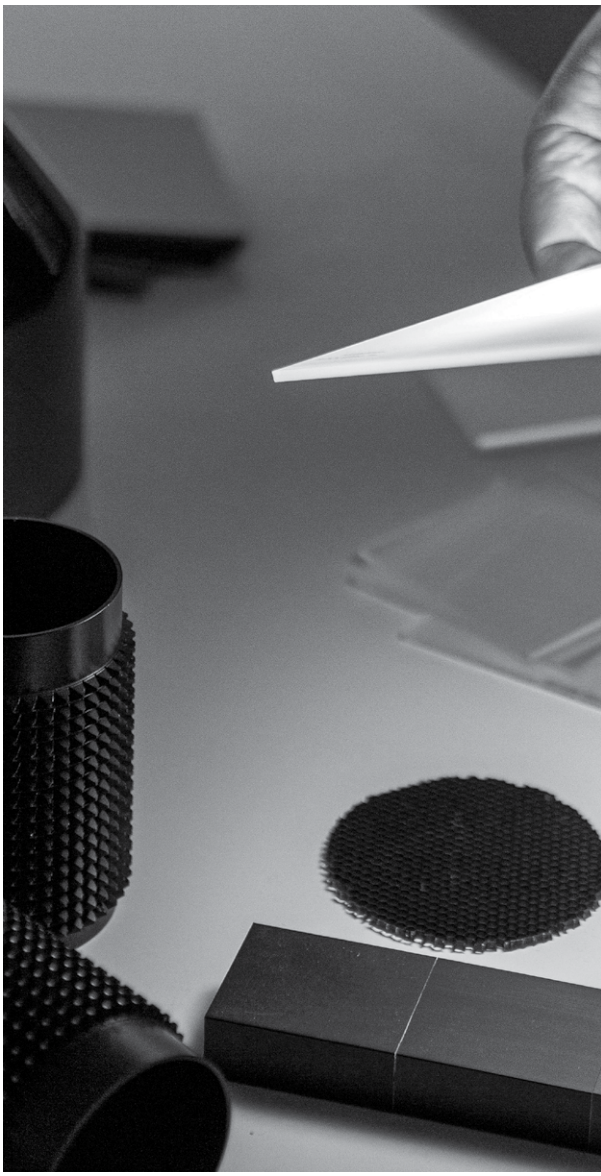
The pre-treatment process creates a high corrosion-resistant product in seven steps, including alkaline degreasing, etching, titanium passivation, and hot air drying. After pre-treatment, a UV-resistant polyester thermosetting powder coating is applied, certified according to European fire and fume regulations, and is solvent-free. The hardware used for outdoor luminaires is made from high-quality stainless steel to assure the entire quality of the product, and protection compounds avoid electrochemical corrosion.

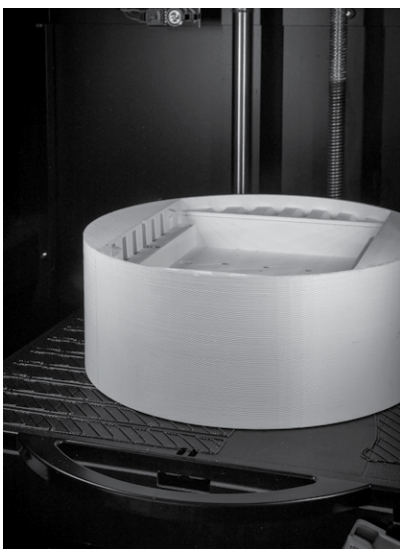
This dedicated treatment is even reinforced by two individual trademarks: Delta Light Quali Protect® and Delta Light Supreme Texture®. The former covers the protective non-organic pre-treatment applied to the most suitable alloys to ensure long-term corrosion resistance, while the latter covers the final finish of the product in terms of both weather and UV resistance.

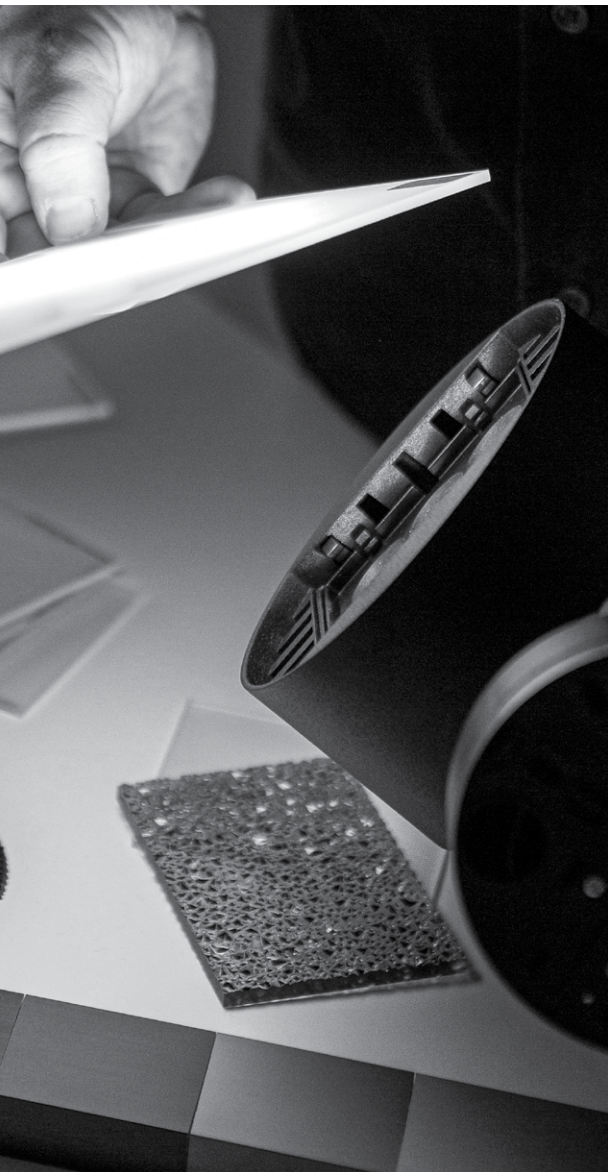
5 YEAR GUARANTEE

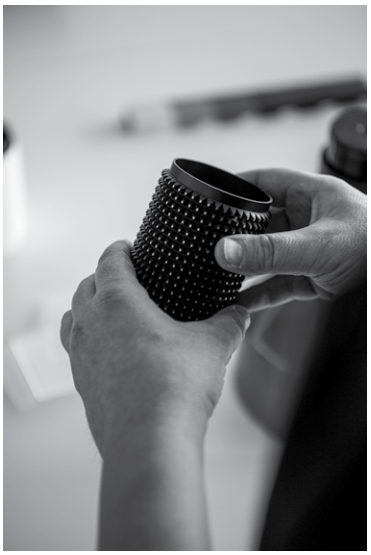
Throughout the entire design and production process, Delta Light handles the strictest quality parameters to ensure products and services are designed and produced to exceed customer requirements. Every step in the production process undergoes an extensive quality procedure, covering both product quality and testing. As such, each product that leaves Delta Light has been thoroughly inspected and tested, resulting in minimal returns and maximum efficiency. Product quality and safety testing according to the international IEC standards is done in our Delta Light Laboratory.

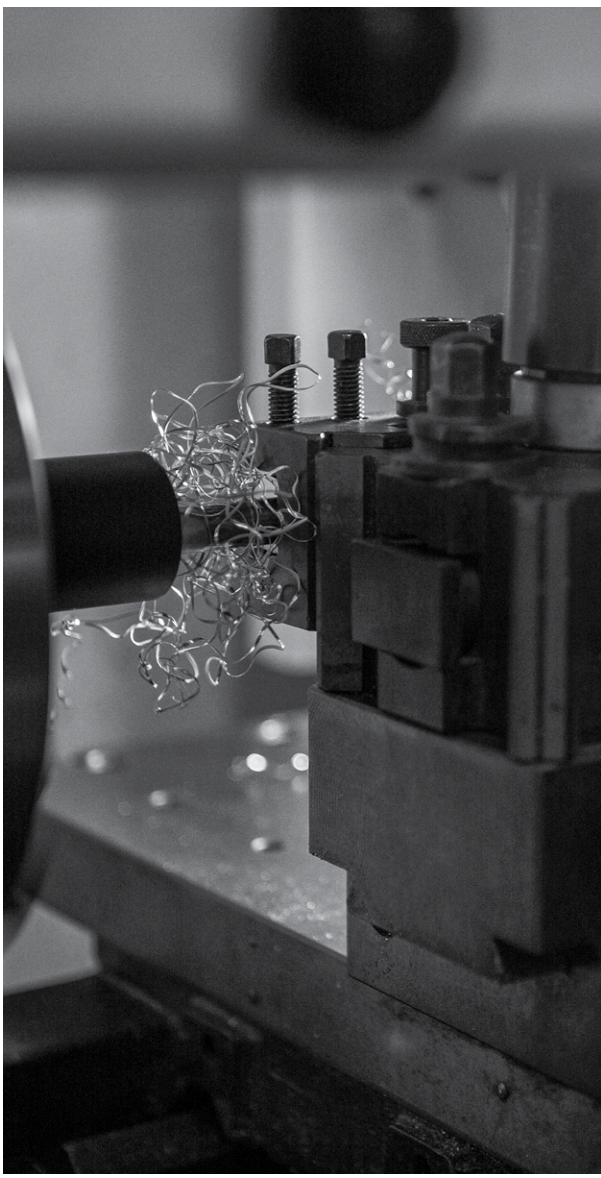
To stand by this quality promise, Delta Light offers a five-year guarantee on its entire indoor and outdoor lighting range.
Thanks to this initiative, customers can be sure that by choosing lighting solutions from Delta Light, they are investing in the future.











sustainability

Just as the digital revolution has drastically changed the way we live and work, so will sustainability in the near future. Sustainability will create added value and drive economic growth, it will permeate everything we do and that will have its consequences. What consequences then? That's what we at Delta Light are looking for every day. Sustainability is not so much a destination of one big goal, but rather a path with an accumulation of smaller initiatives, where every effort counts to achieve that bigger collective result.

At Delta Light, we recognise that our business activities have an impact on the environment, and we take this responsibility seriously. We place great importance on ecological awareness and sustainability. Our goal is to produce light fittings that are inventive, efficient and also environmentally friendly. We constantly strive to improve our products and operations in terms of efficiency, longevity and sustainability.

With each new collection, we integrate the latest technological developments wherever possible, make improvements in recyclability and pay close attention to efficient use of materials, production and transport.

Our commitment has been recognised with prestigious awards such as the Lighting For Good Awards in 2019 and 2020. Our commitment to sustainability does not only extend to our production processes. Our headquarters in Belgium are equipped with solar panels that produce enough renewable energy to power our entire production line and our office site. We also pay a lot of attention to recycling and waste management. Many of our luminaires are made of aluminium profiles and we make sure that they are manufactured optimally, thus minimising waste. And all that aluminium waste is collected and recycled, as aluminium is 100% reusable.

But we are also upcycling. In the autumn of 2022, together with Dutch company MVRDV, we launched High Profile, a collection of colourful lighting fixtures based on aluminium cutting remnants from profiles. A refreshing and sustainable design that was awarded the dezeen award for best in lighting of the year 2022, an honourable mention we cherish.

We are also quite proud to offer our employees a healthy, safe and harmonious environment, both in our global offices and in our Belgian headquarters. Our sustainability efforts and commitment to the well-being of our employees earned us the bronze Ecovadis medal in 2019, and the silver in 2020, 2021 and 2022.

is the new digital

design collabs

Throughout our history we've focused on creating lighting solutions that can enhance any building or setting. For some of these collections we have collaborated with external designers, opening up new exciting adventures in lighting. Merging the vision and concepts of these leading architects and designers with our in-house R&D and production expertise, exemplifies how Delta Light, hand-in-hand with them, continues to step into the future.

MVRDV

×

DELTALIGHT®

MVRDV introduced the idea to develop a new design with Delta Light's waste material, instead of inventing a completely new product. The name stems from profile lighting as a key part of architecture which often produces offcuts as a residual product – these scrap elements became the starting point of the design. The resultant design looks critically at the manufacturing process, finding not only opportunity but also beauty in elements that are normally discarded as waste.

HIGH PROFILE

The High Profile series is a range of luminaires inspired by leftover aluminum profiles. The design takes a critical look at the manufacturing process, finding both opportunity and beauty in residual elements that would normally be cast aside. The industrial look is softened by giving the profiles a colour dip; the series comes in pink, white, turquoise and random, adding MVRDV's well-known use of expressive colours to Delta Light's typical colour range.The High Profile series is a range of luminaires inspired by leftover aluminum profiles. The design takes a critical look at the manufacturing process, finding both opportunity and beauty in residual elements that would normally be cast as metal."

Winner: Lighting design of the year 2022. MVRDV and Delta Light have produced a series inspired by the beauty in elements normally discarded as waste.

`

Judges comments: "High Profile is an ingenious use of discarded materials to create a very strong narrative. The lamp fits into a range of different aesthetics, whether you are are going for pastel or metal."

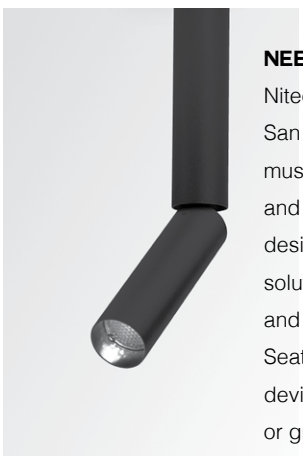
XY180

OMA is an international practice founded by Rem Koolhaas, operating within the traditional boundaries of architecture and urbanism. AMO, a research and design studio, applies architectural thinking to domains beyond. XY180 is a 3-piece collection of luminaires designed by OMA The collection was born from a fascination with point, line and surf ace, key characters in the discourse of architecture. The collection uses precise geometry proportions. The base elements. which include a tube light and a spotlight, can be combined with a hinge, to general countless light conditions. both essential and complex .

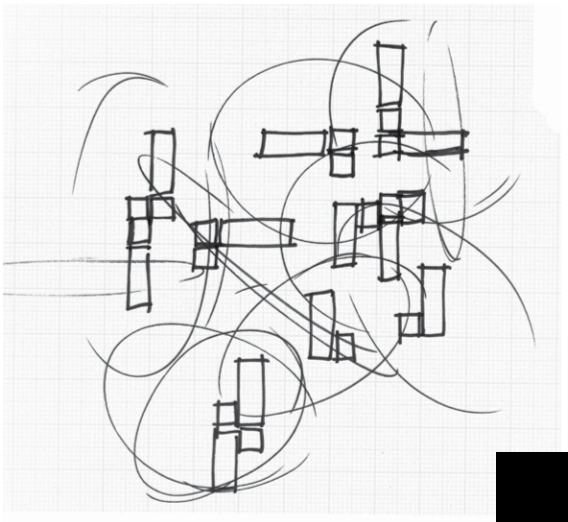
OMA

Niteo Lighting



NEEDLE

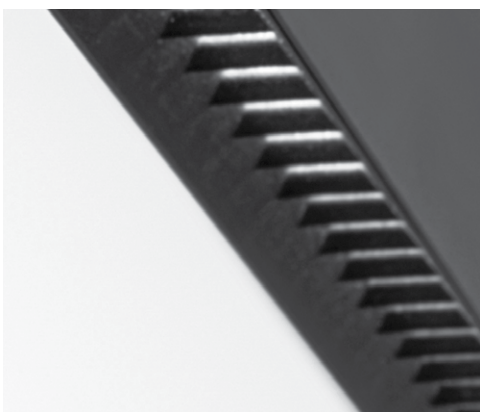
Niteo is a premiere lighting design studio with offices in Seattle, San Francisco, and Singapore. With a portfolio ranging from museums to personal art collections, corporate offices to retail, and landscapes to art displays, their intimate engagement through design attention to detail is evident. Niteo delivers elegant lighting solutions via leveraging decades of experience in a collaborative and technically savvy way. Delta Light collaborated with Niteo's Seattle office to develop the Needle. This bespoke luminaire was devised to provide a playful solution in an elegant form. As a single or grouping of multiple fixtures, the slender and flexible design permits it to blend into ceilings, peek around corners, or demurely clamor attention.



Dean Skira

NIME - POLESANO - CONFORM

Dean Skira is the founder of Skira, an award-winning practice based in Pula (Croatia) with projects also in the EU, Middle East, Russia, Canada, and the United Kingdom. For the past 30 years, he is building and creating mostly with intangible forms while working with investors, architects, and designers to create meaningful lighting experiences.



UNStudio

SOLISCAPE

An extremely versatile and flexible system, specifically designed to create human-centric environments. Developed together with UNStudio, Soliscape combines lighting, acoustics and IOT into an aesthetically appealing solution. Soliscape presents a toolbox with flexible components to architects and designers, to create unique constellations in human-centric environments.

Logic

FIND ME
ON PAGE 500

I'm new to the range.

Our Logic extensions are the perfect example of our continuous quest to innovate. A range that breaths quality, shows our idea of family thinking, makes use of clever design and most of all adds to our Delta Light outdoor range. With the Logic 190 R OK as masterpiece - fully adjustable on-site without the need of opening the luminaire.

Smart, clever, Logic!

Logic Linear

Brings any architecture to life

Based on the same principles as Logic 190 R, Logic Linear offers additional options in linear upligting. As an individual projector or installed in a continuous line, these fittings are perfect to install around facades or other architectural elements. With its wallgrazing optics, Logic Linear easily lights up structured vertical surfaces to enhance the sence of depth of the structure and make them more lively.

The Delta Light range has more to it than light alone. We play with light that seems intangible and combine it with materials and textures to make it tangible. Only like that it is possible to talk about “look and feel”, “a touch of light” or “light that embraces you”. We give an extra dimension to light.

It’s also about how good the light looks

Finish

Light means a lot, and light can do a lot. Light is there to create an atmosphere, light can energize and light can calm down. Light can lift up a space, light can make you feel good. Light canmake you look good. But who thinks about the light? It’s not only about how the light makes you look, it’s also about how good the light looks.

NIME PATENTED

Design by **DEAN SKIRA** & Delta Light

The black hole reflects no light, but the light of Nime finds its way out.
The tangible part disappears inside its heart, and the intangible part illuminates the object.

deltalight.com/nime

1/1

SCALE 1:1
10 100

The fifth form of light

The first form of light is
in the source.

The second is
the invisible form of light itself.

The third is the form of the object revealed
by light before it touches it,
the fourth is the form of the shadow.

And the fifth is the form of the consequence that
comprises all the previous four forms, as well as the
way we feel and experience the space considering
the four forms.

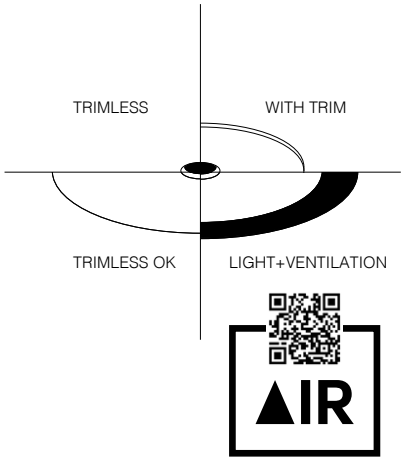
FIND ME ONLINE



Better not underestimate Nime,
as the aperture of only 10mm is only the façade that hides away a host of possibilities to control your beam. Within the same opening and thanks to an ingenious set of custom optics, Nime allows you to focus the beam from 20° up to 40° and offers rotation up to 355° and tilting up to 30°, without changing its looks. With this magic trick, Nime lets you:
Emphasize objects on vertical and horizontal surfaces, without visual appearance of the fitting or its source

Light up small to large objects,
even when they are not aligned with the luminaire.

Perfectly address the light where
it is needed, even in slope ceilings.

Create equal circles of light from
both low and higher ceilings.

Furthermore Nime can also be used as light unit in our **AIR** range, a toolset that combines light and ventilation in one.

ENTERO

FAMILY

Inside. Outside.
Entero is engineered to perfection,
both for interior and exterior applications. It enables architects and designers to achieve style continuity throughout the entire project, applying the same clean sightlines and minimal appearance to damp locations, outside ceilings and cantilevers.

Intense Energy.
Entero was designed as an answer to the energy of creation. Crafted to add value to spaces and experiences, bringing intensity to lighting schemes. A fusion of power and elegance, comfort and precision.
One single range of luminaires to illuminate with power or for atmosphere, from low and high.

Furthermore Entero can also be used as light unit in our **▲IR** range, a toolset that combines light and ventilation in one.

What if there is only one?

One for All.
Entero is a set of lighting tools enabling architects and designers to create discrete but diverse lighting schemes, using only one luminaire type throughout the entire project.
Any project. Retail, residential, public, hospitality, art… Any need.
Any size. Anywhere.
It is the most complete family, created to excel in any environment.

B

IMAX

Where the initial evolution in LED and optics focused on better output, smaller chips and longer lifetime, the second evolution is again shifting to user comfort with more precise optics and better light control. As the purpose of the iMax II family is to provide the best visual comfort to the user - thanks to its recessed LED engine - this range is perfect to build further on this evolution: improved efficiency, improved beam angles and the possibility to combine all versions as they use uniform LED engines.

IMAX II
ADJUSTABLE ROUND

The round versions with trim within the range are available with a clear glass, offering IP54. This enables you to continue minimalism and uniformity throughout bathrooms, wellness areas and other indoor damp locations.

iMax II fits in The Soft Ceiling concept from Delta Light, as it focuses on minimal appearance, giving focus to the light instead of the fixture. As such, the collection fuses Delta Light's aspirations for design sophistication and attention to detail, with precise engineering and premium materials, resulting in minimal fixtures with maximum impact. The interchangeable tubes and colour finishes allow you to apply luminaires that disappear into the background.W

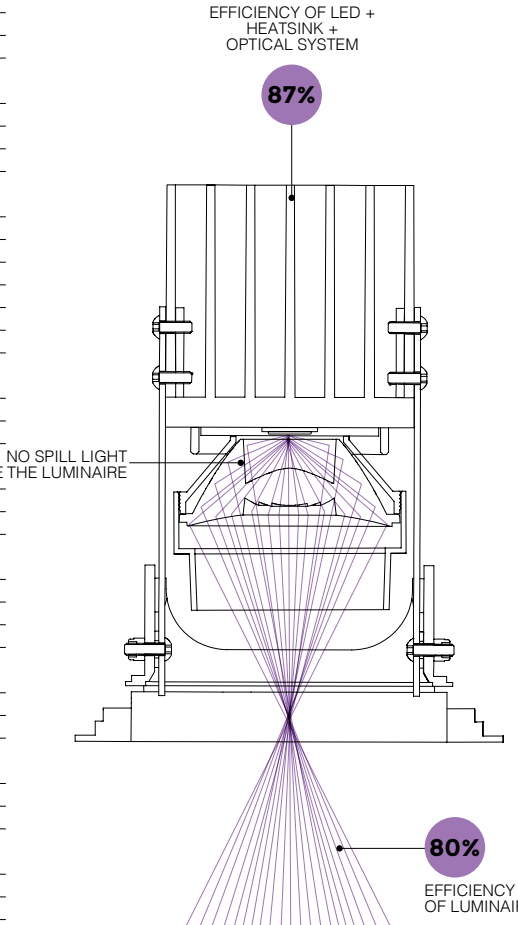
HIGH EFFICIENCY

Apart from the high light transmission of the lens for optimum efficiency, its specific construction creates a focal point that is not inside the luminaire, but at the height of the opening in the ceiling. In this way, every single ray of light produced by the LED engine is being directed through the lens towards the opening of the iMax II luminaire. This reduces the spill light inside the luminaire and increases its efficiency.



UGR <16

VISUAL COMFORT

IMAX

The iMax II range combines premium LED engines with precise optics, delivering high performance, maximum efficacy and high quality illumination. iMax II is using lenses out of plexiglass HW55, a material able to withstand high temperatures and allowing lumen packages up to 2000lm. Next to the high output, the lenses allow for a perfect control of the beam angle and a high uniformity on the light emitting surface, which results in reduced glare. Furthermore, if a different beam angle is required, the lenses can easily be interchanged.

To offer even more flexibility and design freedom to the lighting designer, a range of light refining accessories is available to alter the light effect to the specific needs of the setting. A honeycomb to further minimize the direct glare from the light source, a sandblasted glass to create a diffuse general light effect and 3 specific lenses to either create a more oval or a wider light distribution or to smoothen the edges and create a softer transition.

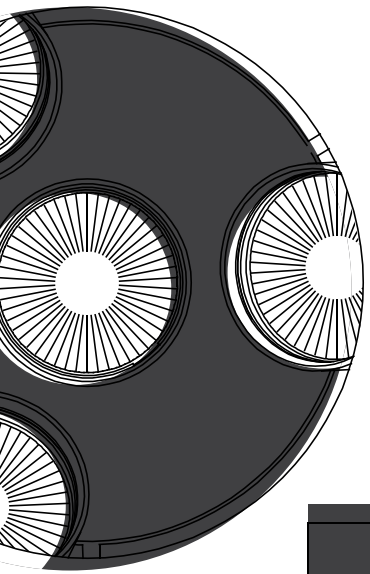
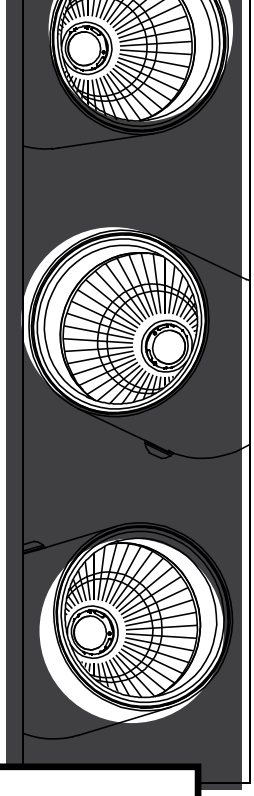
HOLE IN ONE





The name of this product says it all.
The Hole In One - available in both rectangular, square and circular shape - lets you see a hole in the ceiling and nothing else. That is as long as you don't stand underneath this lighting fixture. This fitting offers enough space for different modules being able to point at different directions, all from within the same hole in your ceiling, making it very discreet.

Light and space are inextricably linked with one another, something that the Hole In One plays on so ingeniously. Intended in the first place to be functional lighting, this contemporary design pokes a little fun at its surroundings at the same time. The black background in the fitting creates the illusion of an unfathomable unendingness around the light source. The magnetic mounting of the modules makes it easy to quickly adapt the lighting to a new setting.

deltalight.com/hole-in-one

Unfathomable unendingness a.k.a. black box :-)

SPLITBOX

Splitbox is a trimless integrated lighting system, with the full flexibility of surface mounted lighting.
A black minimalistic cove of 80mm wide and 225mm or 315mm long can be equipped with one, two or three highly flexible spot modules. These Spy modules can remain encapsulated in the ceiling or emerge in its entirety and be tilted 90° while rotate 355°, allowing focused illumination in one swift move.

The black background inside the cove creates an illusion of unendingness around the light spots,
enforcing the fully integrated architectural lighting concept.
A range of light refining accessories is available to guarantee optimal optic performance and maximum eye comfort.
The outside of the Spy modules is available either black or white, which can be combined with exchangeable inserts in multiple colour finishes.

CARREE

The Carree range is Delta Light's answer for easy-to-install, timeless and functional recessed spots, as it has been a Delta Light classic for many years. This family of square recessed luminaires offers refined solutions with integrated LED, either with or without trim. The straight lines in the design make a contemporary spot out of Carree, not only useful in modern architecture but also in many other applications. Carree can be used throughout the entire project, as it also includes IP44 solutions for bathrooms and even IP65 luminaires for outdoor use

REO

FAMILY

The Reo collection is more than one product, it is a family which offers a solution for many lighting demands, from residential to hotel, restaurant to retail and much more. In line with this philosophy, Reo comes in single and double fixtures, round or square, orientable or fixed, in multiple finishing colours, for both indoor and outdoor use. The design of these recessed conical spots delivers a hardly visible transition from the intense light to the ceiling, resulting in a halo-like effect, ideal to give the space an extra dimension.

MICRO REO
Being the smallest member of the family, Micro Reo excels in minimalism in design and excellence in performance as it offers a 7,1W LED solution. It comes as an IP20 version and as a luminaire with higher IP-rating that can be used in bathrooms and other wet areas.

MINI REO
Mini Reo offers a multitude of lighting solutions, as it combines multiple beam angles in both non- adjustable and adjustable luminaires. Spot, Medium or Flood can be combined to fit the specific needs of the project.

REO
Similar to Mini Reo, Reo offers adjustable and non-adjustable downlights in multiple beam angles. With an output up to 10,4W, Reo can easily be integrated into hospitality and residential projects, especially when using the Soft Dim version which creates a warm and cosy atmosphere when dimming down the luminaire. Reo comes in a round and square design.

ARTUUR

FAMILY

Everything about Artuur catches the eye, be it its design, its optical compartment or its small protrusion when installed into the ceiling. Artuur comes as a downlight with sloping edges towards the center, both round and square. The design twist is in the asymmetrical square version, easily deceiving the eye but inspiring you to present creative layouts.

Another design element is the sophisticated lens on top of the deeply placed LED. While offering an outstanding quality of light, its remarkable aesthetics wow you, even when Artuur is not turned on.
Additionally, Artuur can combine pleasant general lighting with uniform wall washing, as a secondary LED module softly throws its light on vertical surfaces.

When installed into the ceiling, Artuur adds depth into the room owing to its gentle protruding ring. Small enough to be noticed, big enough to make a difference. Put the complete luminaire into a recessing kit and Artuur goes from protruding to trimless, refinement at best!

Our Plat-Oh! family is the answer to a present-day problem. The constant evolution within the world of construction on the level of energy savings, sustainability and legislation forces changes in the way there is being build. One of the results is building more compact, and compact in size means less room in installation depth also when using hollow ceilings.

Plat-Oh! is designed to fit in these new building concepts as it offers a family of tiltable downlights that only require 55mm of recessing depth. Even within these limits, Plat-Oh! can be tilted up to 30°. Together with its 2 different beam angles, 3 finishing colours and the choice between trimless or with trim, Plat-Oh! offers a flexible lighting solution for demanding environments.

DEEP RINGO

FAMILY

The conical shaped design of the Deep Ringo fixtures and its deeper placed LED source make sure that glare is reduced to a minimum when Deep Ringo is installed in the ceiling. The small trim gives a refined touch to this elegant luminaire.
Available in 3 sizes, with trim or trimless, fix or adjustable, a range of beam angles and multiple finishing colours, Deep Ringo is an easy-to-use downlight throughout the project. Its golden or bronze finish is perfect to add a sniff of luxury to the room.

MINI DEEP RINGO
Mini Deep Ringo is playful, as it comes in a multitude of finishing colours, has 3 different beam angles to choose from and can be fix or adjustable. A range of possibilities in a slender design.

DEEP RINGO
Deep Ringo is the most elaborate of the family, offering LED and halogen solutions, for use in both dry and wet areas. Similar as the Reo family, Deep Ringo also offers a ribbed version that reduces the glare thanks to its cascading transition from light source to ceiling.

Furthermore Deep Ringo can also be used as light unit in our **▲IR** range, a toolset that combines light and ventilation in one.

B

GYN

The Gyn family is a range of gypsum luminaires that complete Delta Light's elaborate range of downlights. The possibility of finishing these products on site in any desired colour makes them suitable for many applications.

The curved shape of the Gyn frame provides a smooth transition from ceiling to luminaire. When Gyn is turned on, the curve provides a soft glow on the ceiling, similar to Reo fixtures.

As a round or square gypsum luminaire, Gyn D steps away from the curved edges and goes straight into the ceiling. With a deeply recessed LED module, Gyn D offers additional visual comfort as it shields off the light source from directly being looked into.

PARTOU

Partou? Oui oui! The Partou family has countless application possibilities, as it combines round and square shapes, fix and adjustable luminaires and offers an
IP44 protection rate from below. Easy to fit in everywhere – partout in French -,from residential to hospitality, from dining room to bathroom.

ADAPTIVE DESIGN
The clever design of Partou offers a multitude of finishing options on 1 and the same LED module. Complete your LED module with the cover you want: round or square, small or bigger, white or black, the choice is up to you!

TWENTY-7

Despite the many advantages of LED as a lighting solution, the incandescence light bulb still recalls characteristics as warmth and cosiness to many people. As a flashback on how it used to be, Twenty-7 brings these characteristics back to live.
As a recessed luminaire where only the light bulb is coming out of the ceiling, Twenty-7 throws light throughout the room, enlighting the space from ceiling to floor.
By using a LED filament lighting bulb, Twenty-7 gives you not only warmth and cosiness, but at the same time adds the advantages of LED.

DIRO SBL

NOT YOUR REGULAR DOWNLIGHTER.
Diro SBL is a range of recessed and surface mounted luminaires, designed with an eye for visual comfort, as it has a multi layered optic finished with a prismatic plexi at the front.
It has a driver included and its reduced height allows you to install it anywhere, either built in or built on.
With finishes in black and white and IP44 versions available, Diro SBL is also suitable for use in damp locations like bathrooms.

GRID

FAMILY

The Grid product family is a longstanding classic in the collection. First as halogen and discharge solutions, later as LED downlight and afterwards updated to the Snap-In principle, a smart and easy way of separating the mounting frame from the LED module, with comfortable installation as a result. This grid range is all about flexibility, as the single or double light units can be directed any way you want.

MICROGRID IN
Microgrid In completes the Snap-In range as it uses a similar principle of dividing the light unit into a mounting frame and a light module that can be snapped into the frame after installation. Microgrid comes in single, double and triple set-ups with trim.
A visor is available to further reduce the impact of the intense light coming from the miniature light source, shielding the light source from directly looking into.

SNAP-IN
The Snap-In principle equals modularity and flexibility at its best, it grants the opportunity to the lighting designer to use his creativity: combine single and double units, use multiple beam angles or play with colour. All to use as surface mounted luminaire or as recessed spotlights, both with or without trim.
Dividing a luminaire into multiple modular parts not only creates uniformity within one family, it also facilitates the installation by giving the opportunity to the installer to place the frame in advance. No need to worry for the lighting modules in further finishing of the room, as the modules can be clicked into the frame afterwards.

B

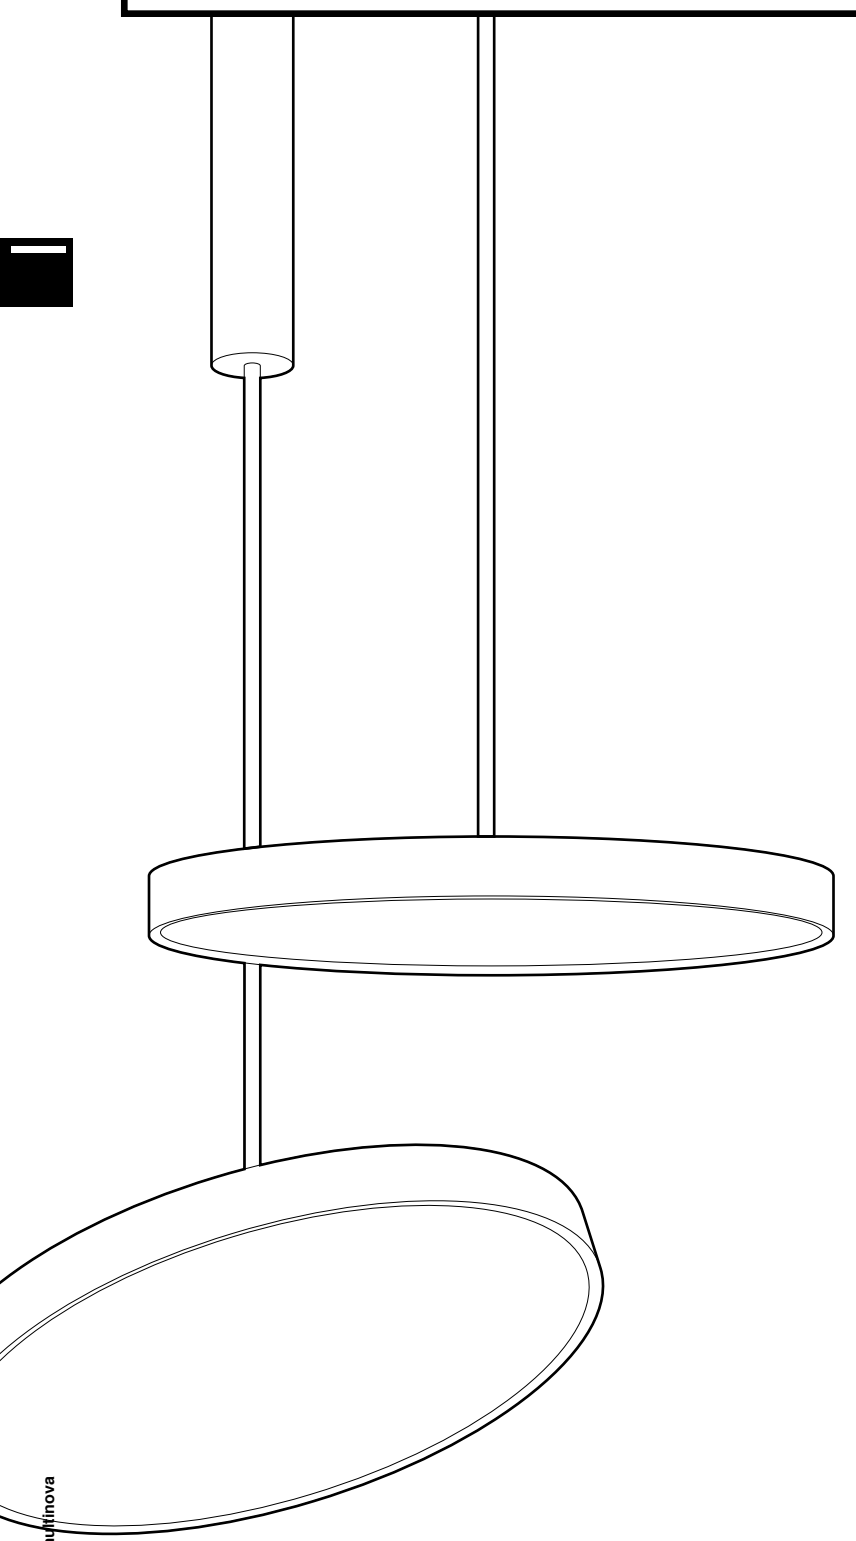
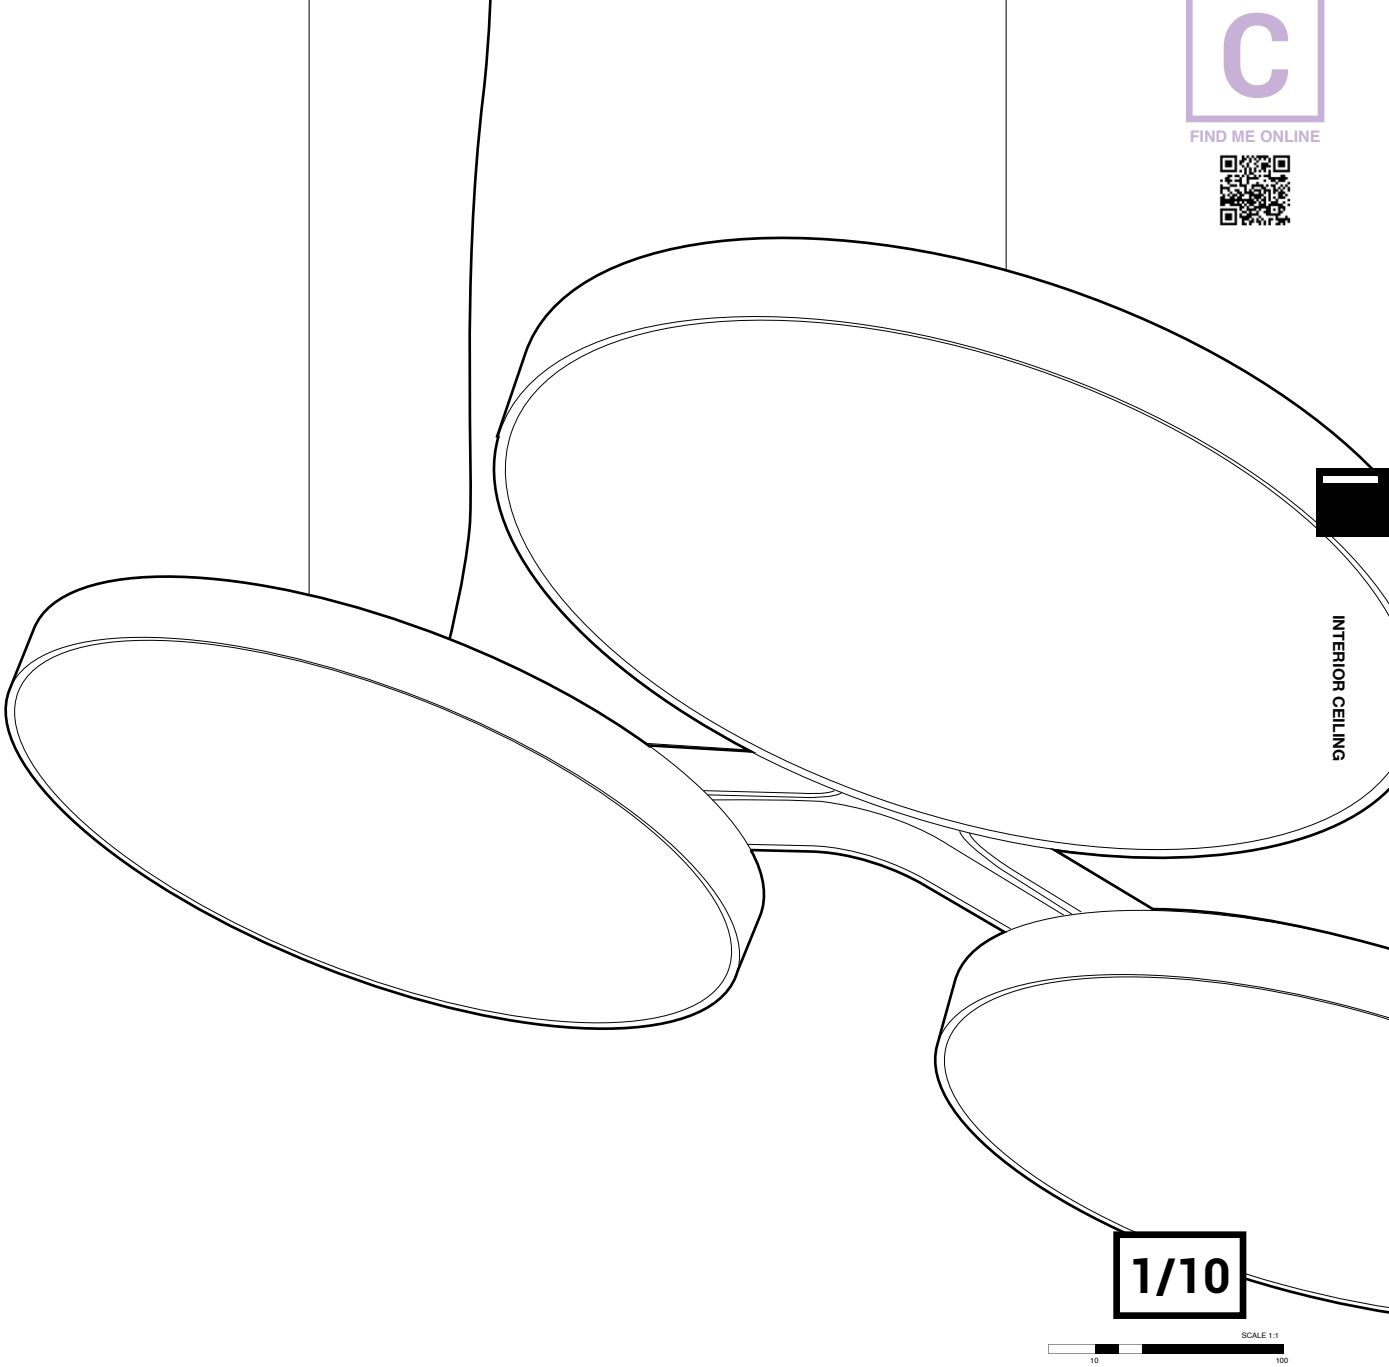
Two different diameters, a down and down-up version and a limited height of only 69mm.



deltalight.com/multinova



MULTINOVA

MULTINOVA

Multinova has something familiar and something fresh at the same time. As a disc of light, Nova refers to the Supernova range, as both families share similarities in looks and ways of installation. But Multinova has some additional features to make it multi-applicable, hence Multi in the name.

With 2 different diameters, a down and down-up version and a limited height of only 69mm, Multinova is perfect to use in different ways. Its small dimensions fit in any residential or hospitality project, as a track mounted luminaire it suits any retail environment and with a prismatic sheet for reduced glare it even adapts in office settings.
Moreover, Multinova can be used on our Magnetic profiles for general lighting.

Multinova comes in our standard black or white and can also be finished in the warmer Gold Coloured to enrich its surroundings. To top it off – next to a sandblasted or prismatic optic – one can opt for a smoked sheet at the front for a more decorative touch. When turned on the disc is fully lit, when turned off a deep dark arises, ideal in combination with a Gold Coloured Multinova.

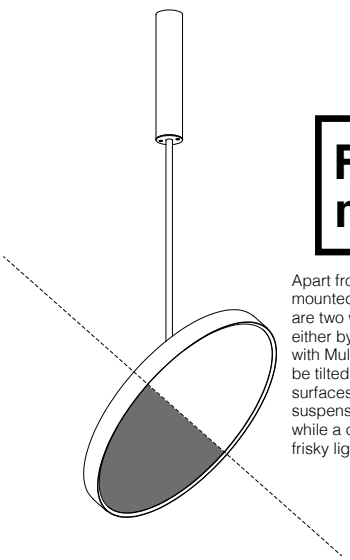
Double or Triple?

Go for the ultimate statement by opting for these clustered Multinova suspensions, coupled together in pairs or as a trio of enlightened discs. Use them in bigger spaces like lobbies, above reception desks or in open plan offices and combine beauty with functionality in one.



Flip me, I'm made for it!

Apart from the recessed, surface mounted and track version, there are two ways to suspend Multinova, either by cable or rod. Moreover, with Multinova 55 OK, Multinova can be tilted up to 90° to face vertical surfaces as well. As such, one single suspension can dress up any room while a cluster of these serve to create frisky light settings.

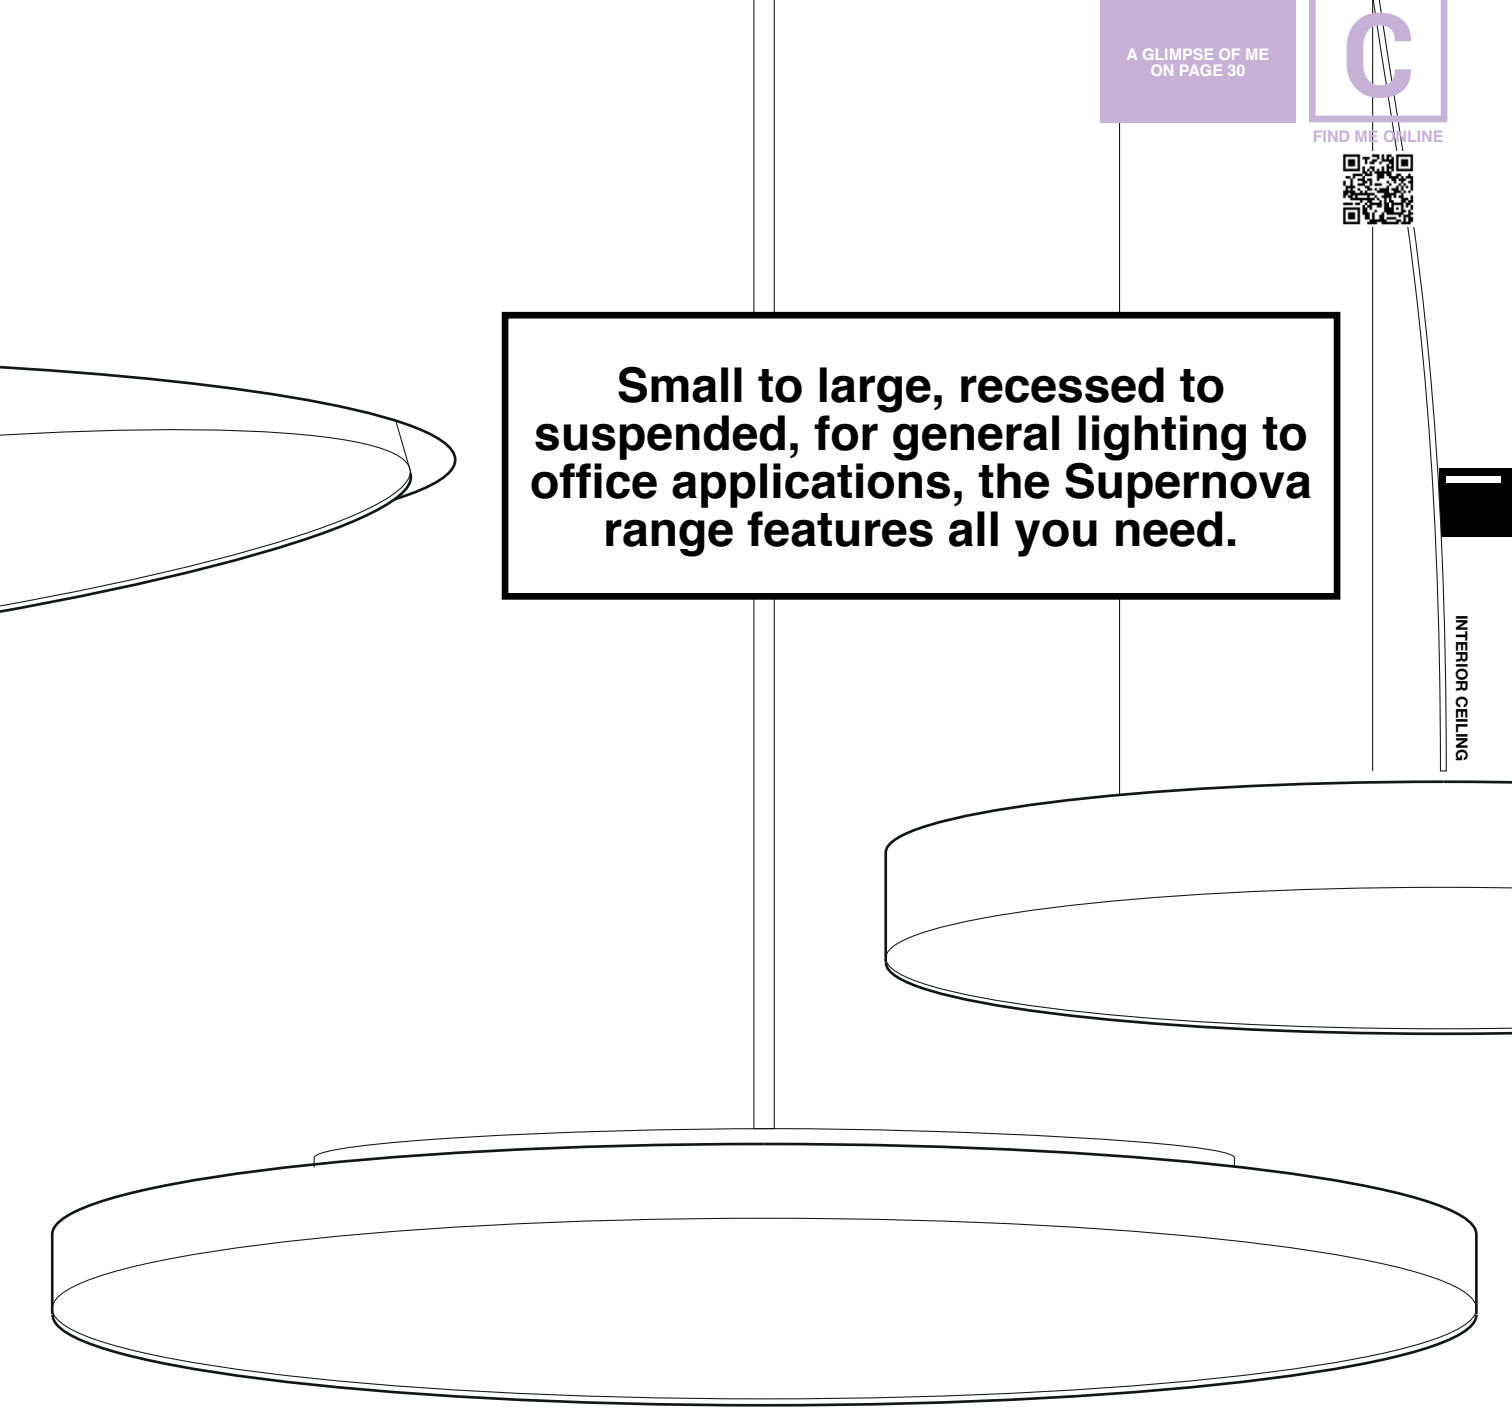
Small to large, recessed to suspended, for general lighting to office applications, the Supernova range features all you need.



SUPERNOVA

SUPERNOVA

FAMILY

Supernova is an extensive range of pure geometrically formed lighting fixtures that guarantee powerful illumination and atmosphere. The range comes in different diameters and application possibilities. Supernova features in-house developed printed circuit boards specifically engineered to provide a uniform illumination of the polycarbonate. Small to large, recessed to suspended, for general lighting to office applications, the Supernova range features all you need.
As a plus, presence control and daylight simulation can be done thanks to the optional presence detection and the tunable white versions of the Supernova.

4 DALI CONTROL CHANNELS DT6

The recessed version is a particularly eye-catching option in the Supernova range, thanks to its tilted application. A recessed kit facilitates installation, allows you to customize the depth and angle of the Supernova, and ensures the inner workings of the fitting are concealed within the ceiling.

Surface mounted, Supernova is a timeless lighting solution that guarantees powerful illumination and striking atmosphere, blending harmonically into its space. Its uninterrupted circular form and neutral character enhance any room, from hotel lobbies to corridors to shops, or any other type of project.

A suspended Supernova uses four delicate steel cords to enable an easy suspension. The down-up version features a polycarbonate on top to avoid dust entering the fixture and guaranteeing a pleasant and an immaculate indirect light effect. Thanks to the transparent supply cable and the trimless suspension kit you can opt for a very clean and minimalistic ceiling suspension.

The evolution in LED allowed for a more minimalistic design, visible within Supernova Flat. It combines the Supernova characteristics with a more subtle housing, creating a neat and modern look. Combined with a prismatic cover, Supernova Flat offers a lighting solution suitable for office and school application as its UGR remains below 19. Available for direct or direct-indirect lighting or with a soft uplight accent in Supernova Flat Smooth Up.

SUPERDOME

Cosiness is large and round; of that the Superdome is proof.
This luminaire was initially created as an XXL version of Tweeter, one of the award winners in the collection. The Superdome is perfectly at home in double ceiling heights, or just as an atmospheric dome over the dining table or as an eye-catcher in the hall at home or the office.

The body made from polyester is available with a black or white exterior, the interior is white for optimal light diffusion. At first glance the Superdome looks very simple, but it is well thought-out. The light source is concealed behind a large diffuser, recessed into the dome obscured direct from view and preventing glare.

XY180

Design by **OMA** & Delta Light

XY180 is a 3-piece lighting collection designed by OMA. The collection was inspired by a fascination with point, line and surface; key architectural elements. The floor, wall and ceiling lights are meant for individual and shared workspaces, but can also be applied to domestic and public interior spaces.

The line uses precise geometric dimensions while the base elements - which include tube lights and a spotlight in either a discreet 3,9W or a powerful 7,1W - can be combined with a hinge to generate countless lighting conditions. As individual components, each part is familiar. When assembled however, they can take on unpredictable and asymmetrical positions.

deltalight.com/xy180

The tube lights create diffuse ambient lighting, while the spotlights provide focused lighting. By exposing the light and allowing it to pivot, the fixture becomes the main feature as it shifts into multiple configurations; a product that contributes to the creation of space, not only by the light it emits, but also by its physical presence.

“Through the choreography of movement and multiplication, the luminaire can manipulate three-dimensional space, entering the domain of architectural space. The modularity of XY180 allows each module or set of modules to be reconfigured and change its impact on the surrounding space.”

PUNK

Design by **OMA** & Delta Light

Step away from brave, alter yourself and dare to dare. This spiked design family breathes creativity and allows you to play with light and texture. To integrate the Punk experience throughout your project, the Punk design is available as a Clip version, as pendants, wall luminaires and in the XY180 range. Available in Black, Gold Coloured and Black Pure, a Black coloured finish with pure aluminum topped spikes.
Don't be deceived: Punk Clip may look small with its diameter of only 39mm, its performance is big! The Clip system lets you install Punk as a semi-recessed light, only letting the luminaire head peeking out of the ceiling.
With its particular design, the pendant versions of Punk make a statement on their own, but hanging them in a cluster make them look like a real eye-catcher. Combining different Punk lengths and different finishing colours makes a unique setting out of every Punk cluster.

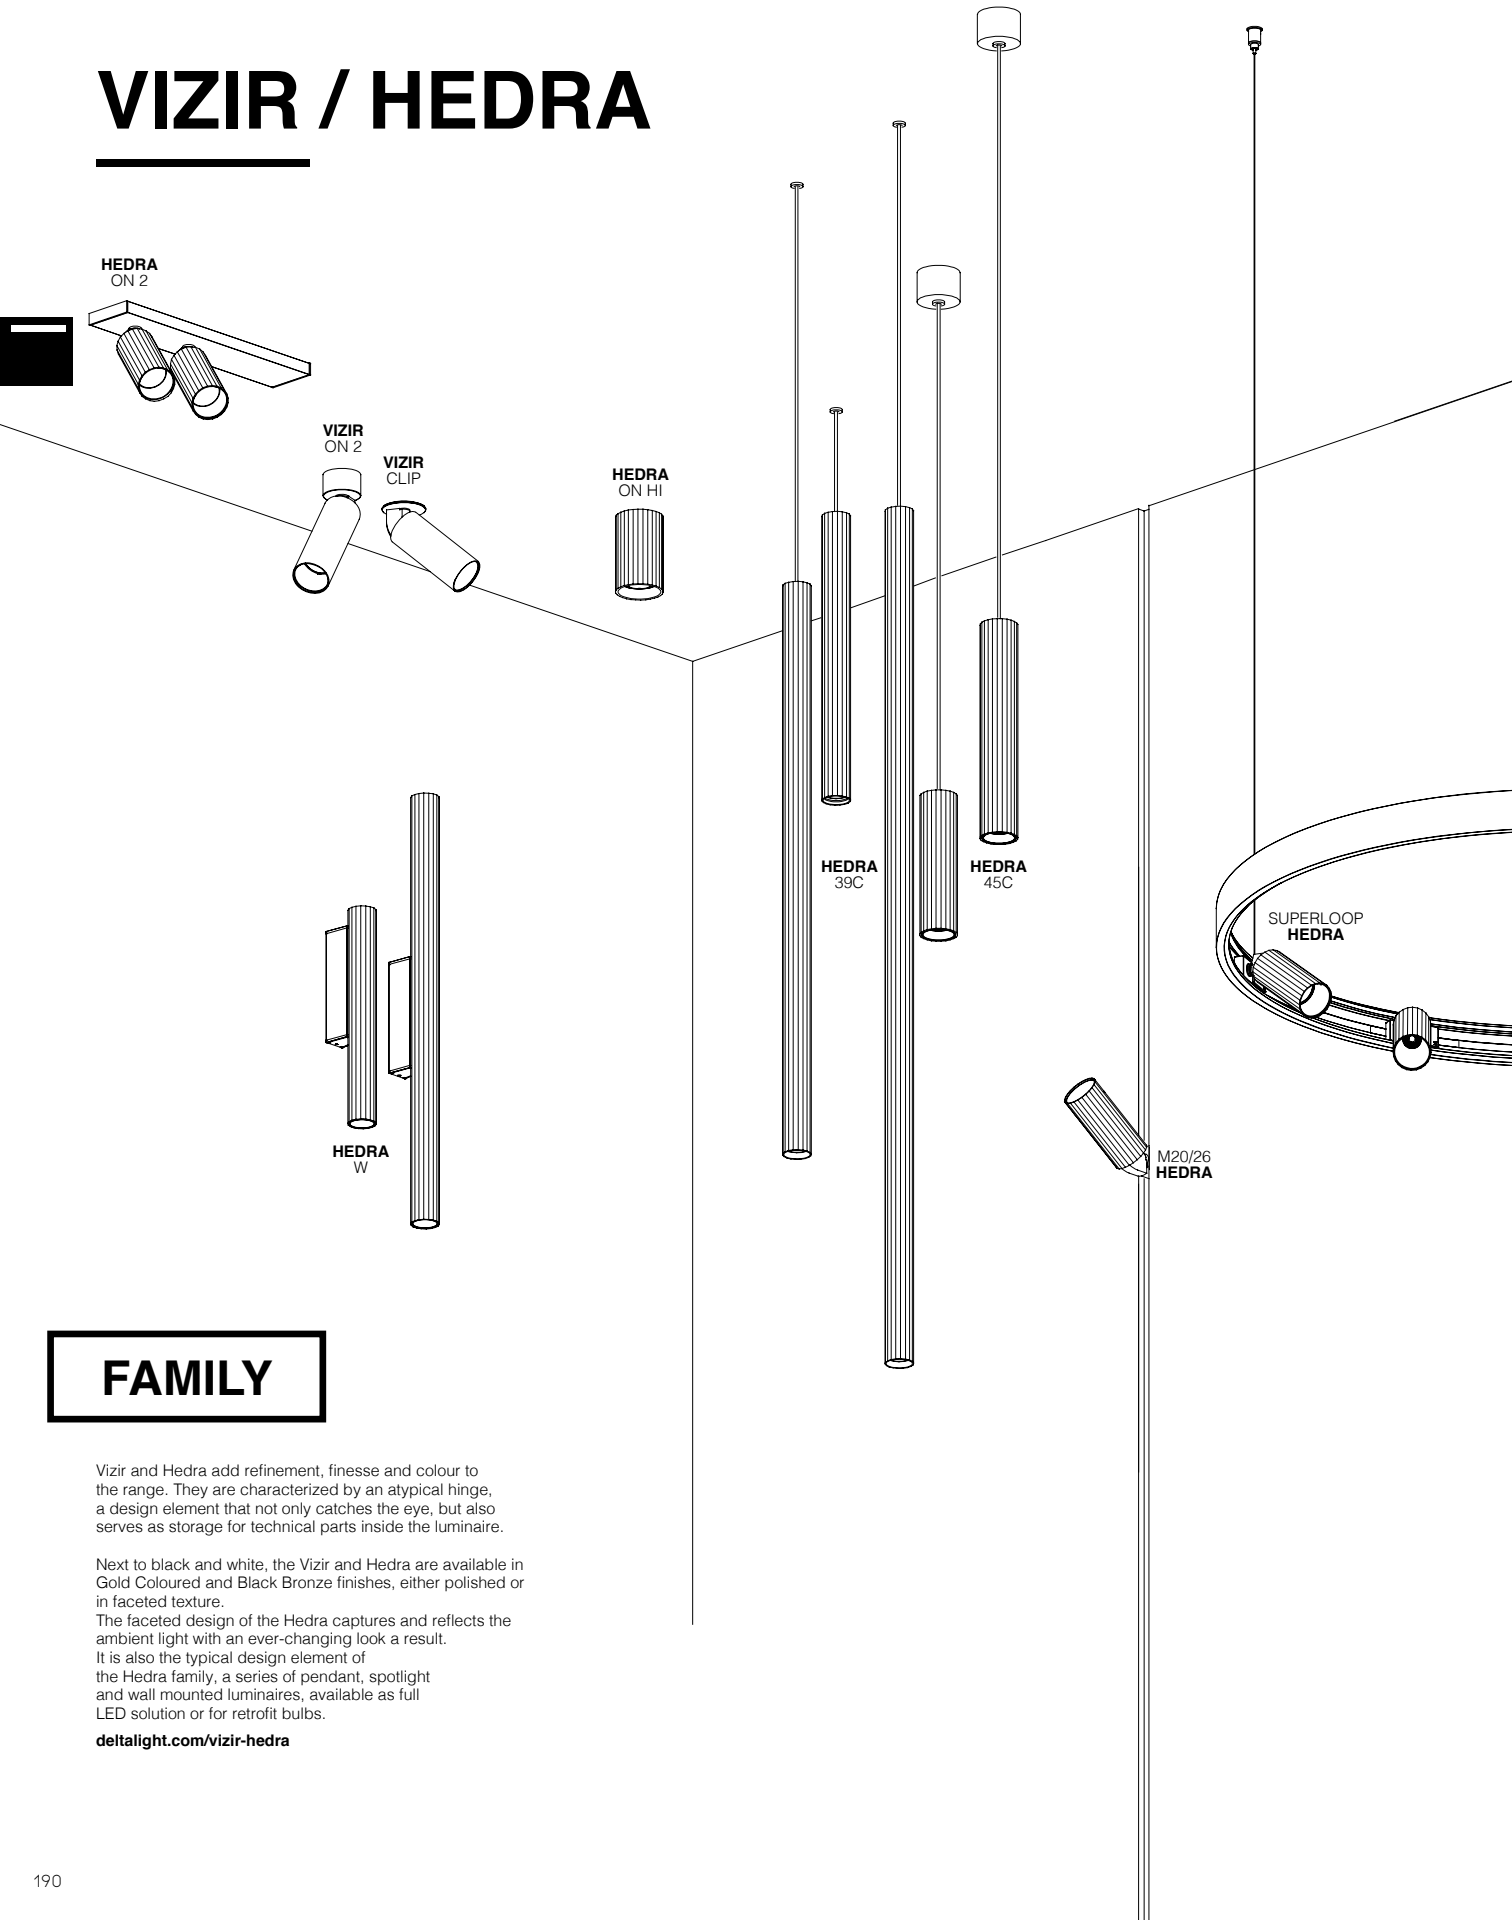
VIZIR / HEDRA



FAMILY

Vizir and Hedra add refinement, finesse and colour to the range. They are characterized by an atypical hinge, a design element that not only catches the eye, but also serves as storage for technical parts inside the luminaire.

Next to black and white, the Vizir and Hedra are available in Gold Coloured and Black Bronze finishes, either polished or in faceted texture.
The faceted design of the Hedra captures and reflects the ambient light with an ever-changing look a result.
It is also the typical design element of the Hedra family, a series of pendant, spotlight and wall mounted luminaires, available as full LED solution or for retrofit bulbs.

VIZIR - HEDRA CLIP / ON
The high-quality finishing on Hedra and Vizir instantly adds a touch of class to the room. The two installation possibilities - surface mounted or semi-recessed - allow to use these directable spotlights in any kind of application. Furthermore, the very slender base with integrated power supply of Vizir and Hedra 2 On bring extra flair and elegance.

VIZIR - HEDRA C
The pendants within Vizir and Hedra make you play with light and design.
By combining decorative E27 bulbs with integrated LED, short with longer tubes, Vizir and Hedra or Black Bronze finish with Gold Coloured, every set-up will be different and unique.

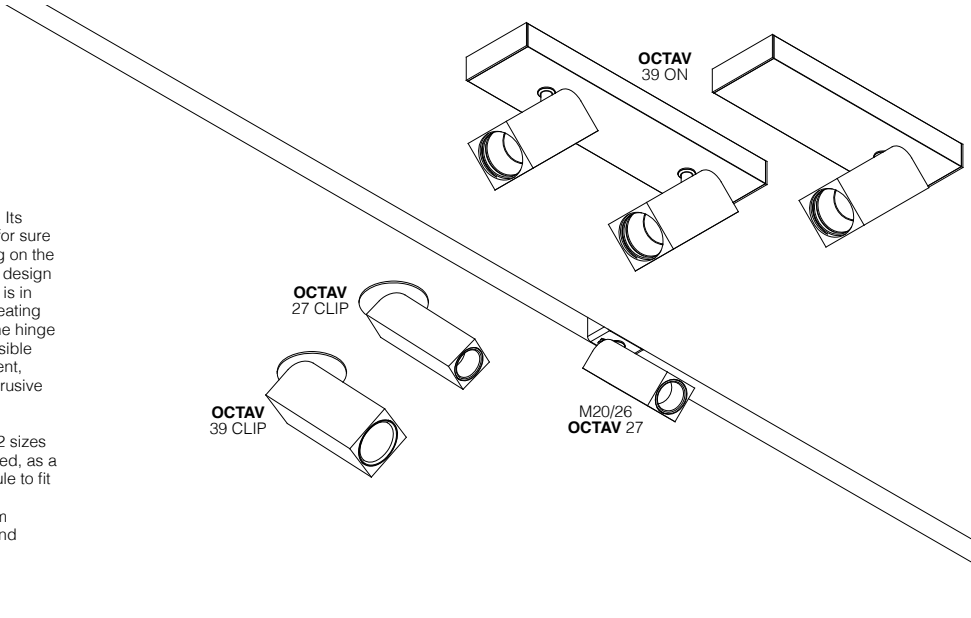
OCTAV



However you look at it, Octav draws the attention. Its design catches the eye, and after a first glimpse for sure you will be intrigued to look at it again. Depending on the inclination angle of the adjustable spotlight, other design elements stand out. Be it the squared design that is in complete contrast with the rounded back part, creating some visual tension. Or be it the details on how the hinge is being camouflaged inside the body, nearly invisible yet very functional. Or be it the optical compartment, hidden away comfortably into the spotlight, unobtrusive for the eye.

As an extreme flexible spotlight, Octav comes in 2 sizes and multiple installation possibilities: semi-recessed, as a single or double surface mounted unit or as module to fit into our magnetic profiles.
With up to 5 different finishing colours and 3 beam angles, Octav is highly applicable in residential and hospitality surroundings.

NEEDLE

Design by **NITEO LIGHTING** & Delta Light

The slender shape of the Needle family brings a touch of elegance into any project. Slim tubes, just carelessly hanging down from the ceiling or cleverly peeking around to throw a highlight wherever needed. Combine multiple fixtures to create playful clusters or use it as a single luminaire in all its simplicity, surface mounted or as module to put on our magnetic profiles.

BOXY

What once began as a cubic luminaire is now an elaborate family of surface mounted luminaires, both cubic and cylindrical shaped. Though different in shape they are still uniform in look, as both shapes have a deeper recessed LED module with a conical, coloured insert in front. While the deeper recessed LED module reduces the glare, the choice in colour creates possibilities for playful and attractive lighting solutions. Alongside the different shapes, this family offers indoor and outdoor luminaires, a perfect solution when recessing is not an option. Furthermore, the WDL versions of Boxy are standalone luminaires for an easy wireless CTRL Delta lighting set-up.

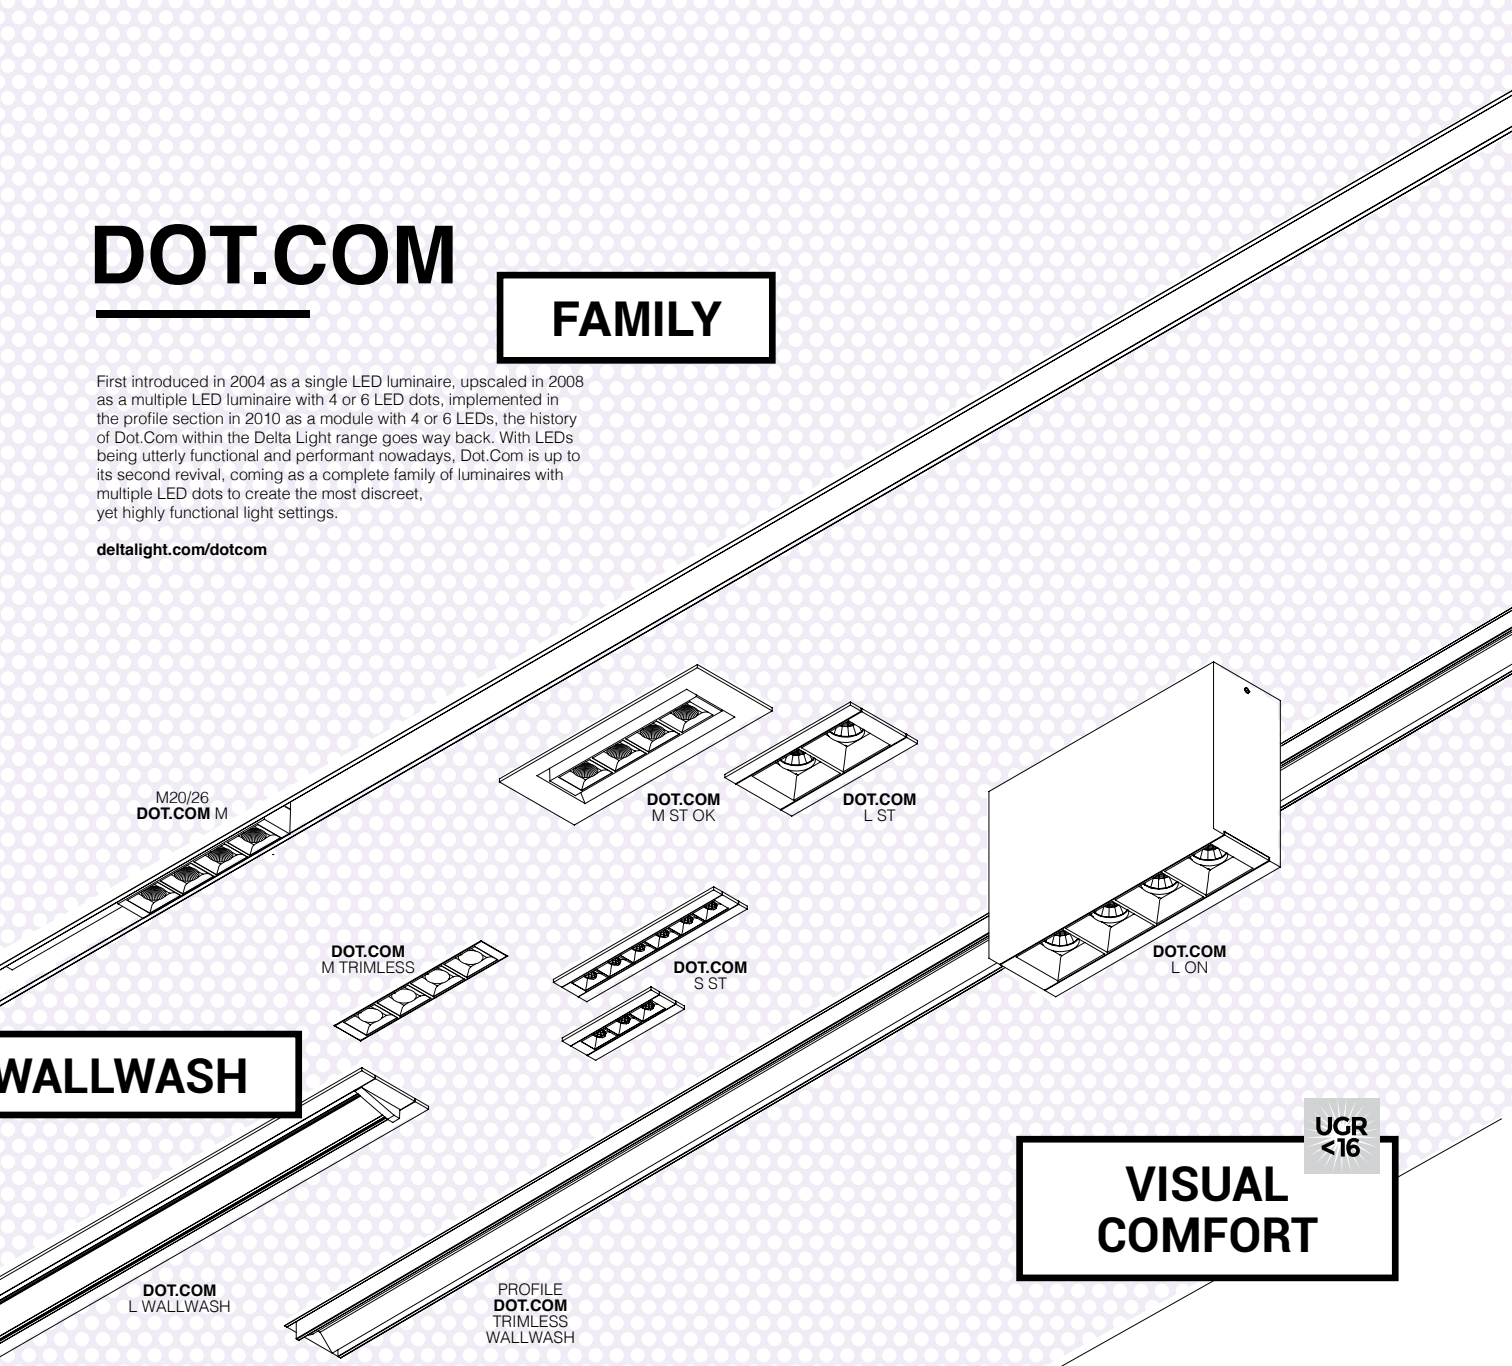
DOT.COM

FAMILY

First introduced in 2004 as a single LED luminaire, upscaled in 2008 as a multiple LED luminaire with 4 or 6 LED dots, implemented in the profile section in 2010 as a module with 4 or 6 LEDs, the history of Dot.Com within the Delta Light range goes way back. With LEDs being utterly functional and performant nowadays, Dot.Com is up to its second revival, coming as a complete family of luminaires with multiple LED dots to create the most discreet, yet highly functional light settings.

deltalight.com/dotcom



WALLWASH

UGR <16

VISUAL COMFORT

DOT.COM S
The Small version only needs 25mm of width, a nearly invisible appearance yet with visible impact.

DOT.COM M
The Medium range includes an adjustable version with trim and a trimless solution. The adjustable Dot.Com M – with tilting possibility up to 30° - is ideal for instance to emphasize an artwork on the wall. The specific design of the trimless luminaire grants the opportunity to install it either completely into the ceiling or semi-recessed, to evoque more expression into the room.

DOT.COM L
With an output up to 12W per luminaire, the Large range is the most powerful within the Dot.Com series. The Large version is the only version within the Dot.Com range that also offers surface mounted alternatives. Similar as for recessed installation, Dot.Com L brings a 2 LED and a 4 LED version within a compact design. With its low glare - thanks to the combination of individual reflectors per LED - Dot.Com L is perfectly applicable for office use.

DOT.COM WALLWASH

DOT.COM WALLWASH
Dot.Com is not only limited to spotlight beam angles, it also has linear wallwashers in its range for a soft, even light effect on vertical surfaces. These come as single luminaires both recessed as surface mounted, as modules to fit in the magnetic profiles and as a bespoke trimless profile solution, perfect to adapt the light to your specific desires.

HALOSCAN PATENTED

Haloscan is a family of accent lights that come semi-recessed, surface mounted or as modules on the magnetic profiles. Designed around its flat optics, Haloscan combines ultra-minimalistic looks with a pleasurable light effect. The light is softly spread by the plane lens, creating up to 4 different beam angles, from spot to floodlight and even linear light.
To smoothly turn and tilt, Haloscan uses the Ex-Centric Rotation System, an asymmetrical hinge that combines rotating and tilting abilities in one swift move.

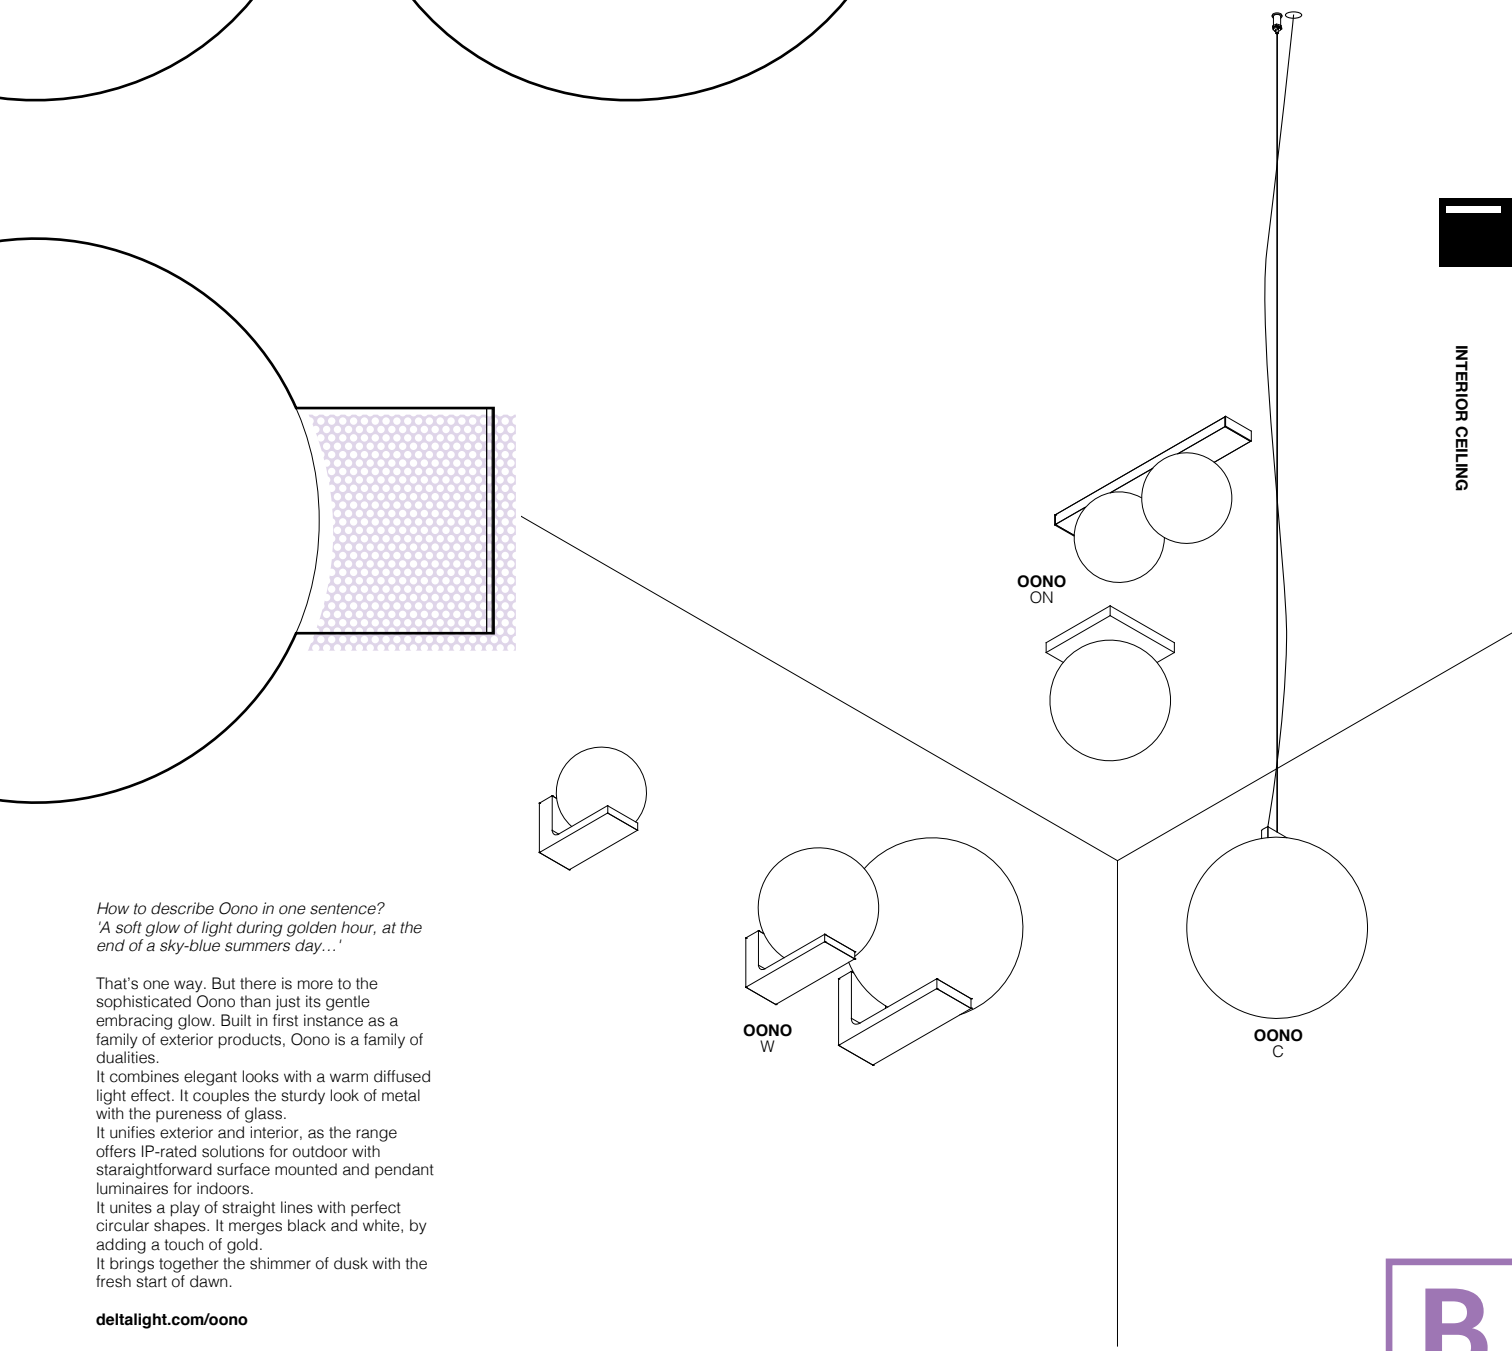
A



How to describe Oono in one sentence?
'A soft glow of light during golden hour, at the end of a sky-blue summers day…'

That's one way. But there is more to the sophisticated Oono than just its gentle embracing glow. Built in first instance as a family of exterior products, Oono is a family of dualities.
It combines elegant looks with a warm diffused light effect. It couples the sturdy look of metal with the pureness of glass.
It unifies exterior and interior, as the range offers IP-rated solutions for outdoor with staraightforward surface mounted and pendant luminaires for indoors.
It unites a play of straight lines with perfect circular shapes. It merges black and white, by adding a touch of gold.
It brings together the shimmer of dusk with the fresh start of dawn.

TWEETER PATENTED

Tweeter has been one of the most remarkable families in the Delta Light collection for many years. Available as ceiling recessed and ceiling surface mounted, Tweeter introduces new levels in flexibility, both in movement as in lighting application. Tweeter is based on **Delta Light's Ex-centric Rotation System**, characterized by an asymmetrical hinge joint, combining extreme rotation and tilting abilities, all in one swift whirling motion.

The recessed Tweeter versions enable a maximum fuse of light and architecture. The spotlight heads are identical to the surface mounted installation and handling is simple and convenient. The double shell design prevents ceiling exposure, while the flexible inner shell tailors for any lighting need. Ultimate refinement is reached with a subtle aureole of light circling around the central led, offering improved lighting aesthetics. The application of the Ex-centric Rotation System not only upgrades movement of the fixture, but more importantly also provides advanced lighting abilities. The rotation mechanism was designed so that the light beam is not cut off, resulting in maximum efficiency.

OBIN PATENTED

Introducing Obin, a cutting-edge lighting solution that embodies our commitment to quality and innovation.

Based on the patented ERS (Ex-Centriq Rotation System) and equipped with flat lenses, Obin fuses ultimate flexibility with supreme user comfort in a minimalistic surface mounted lighting fixture. By adjusting the rounded backside - using the ERS system - Obin is 360° rotatable and 45° tiltable without the need of an additional hinge. On the frontside, the sleek lenses create a sense of depth without the need of real physical space. Combining both results in free space on the inside to house a DALI power supply, perfect for an easy individual controllable surface mounted lighting scheme.

Obin comes as a single or double surface mounted unit or as module to install on our magnetic profiles. While the double versions comes in Black or White, the single spotlight is available in our delicate finishes Brushed Grey, Brushed Copper, Brushed Gold, Brushed Old Bronze and Brushed Anthracite and, easily adding refinement to any room.
To further improve on visual comfort, Obin can be provided with a honeycomb to reduce any rebundant glare to a minimum.

Whether you are looking to create a subtle and sophisticated ambiance in a residential space, or in need of a functional and versatile lighting solution for a hospitality project, Obin has you covered.

ODRON / BOWIE

HAVE ANOTHER LOOK
Don't be fooled: Odron may look peculiar at first sight, nevertheless its specific design is intended to create a compact yet powerful lighting solution.
A second look puts everything in perspective: the flat design of the disc in combination with the shallow base results in a highly functional luminaire within a limited height of 45mm.

As from now, any additional look on it makes you appreciate Odron more and more: its possibility to serve both as a straightforward downlight or as an omnidirectional spotlight, the shiny details of the cover in contrast with the structured lacquer of the body or the touch of colour it adds thanks to the additional golden cover, it is clear that Odron enriches the space in more than one way.

The elegant Odron is available as a clip version and as a single or double spot to be mounted onto the ceiling or as module for our Magnetic profile range.

KEEP YOUR EYE ON THE BALL
Add some body to the room with Bowie, it impresses through its spherical shape. Twist and turn, tilt and aim, Bowie will always look the same, whatever its direction and no matter the angle you look at it. Bowie in pure white or black easily fits in any interior and adds a touch of richness to the room.
Within its range, Bowie comes as a semi-recessed Clip version, as a single or double spotlight to be surface mounted or as module to fit into our Magnetic profile offer.

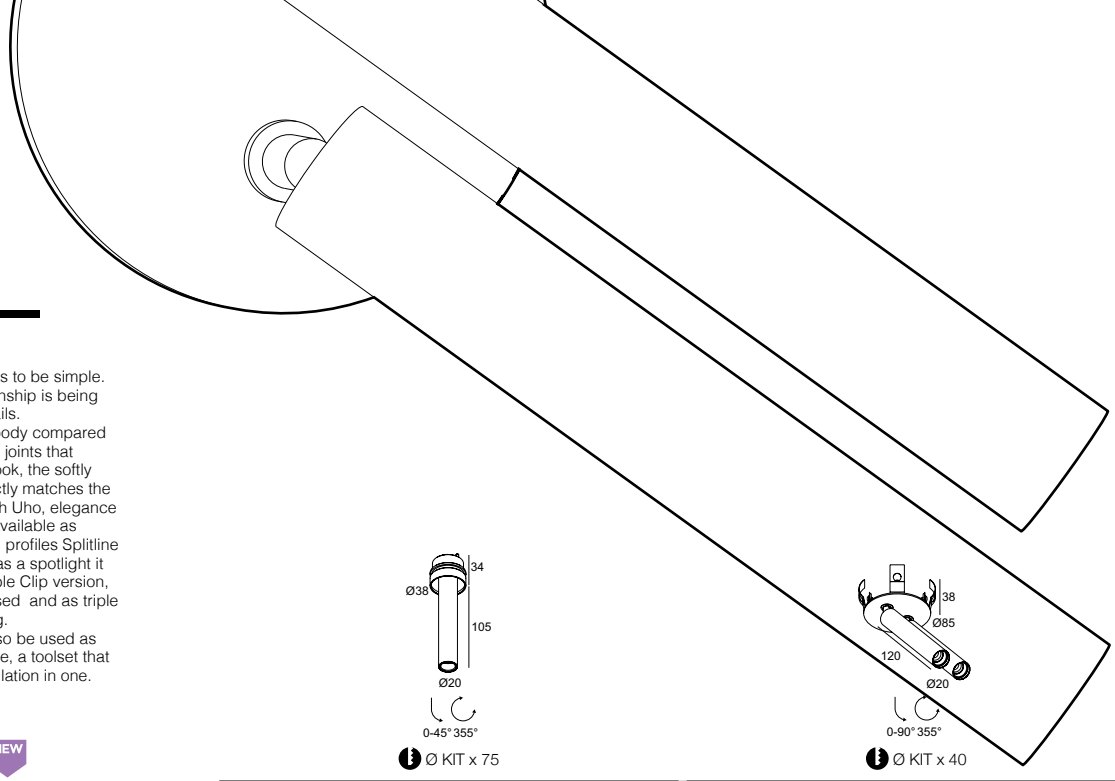
UHO



At first sight Uho appears to be simple. In close-up, the workmanship is being revealed in the little details.
The refined ratio of the body compared to its diameter, the small joints that create a sophisticated look, the softly curved hinge that perfectly matches the contours of its body. With Uho, elegance is in the details. Uho is available as accent light on our small profiles Splitline 14 and Shiftline 19 and as a spotlight it comes as single or double Clip version, as single trimless recessed and as triple unit for surface mounting.
Furthermore Uho can also be used as light unit in our **▲IR** range, a toolset that combines light and ventilation in one.

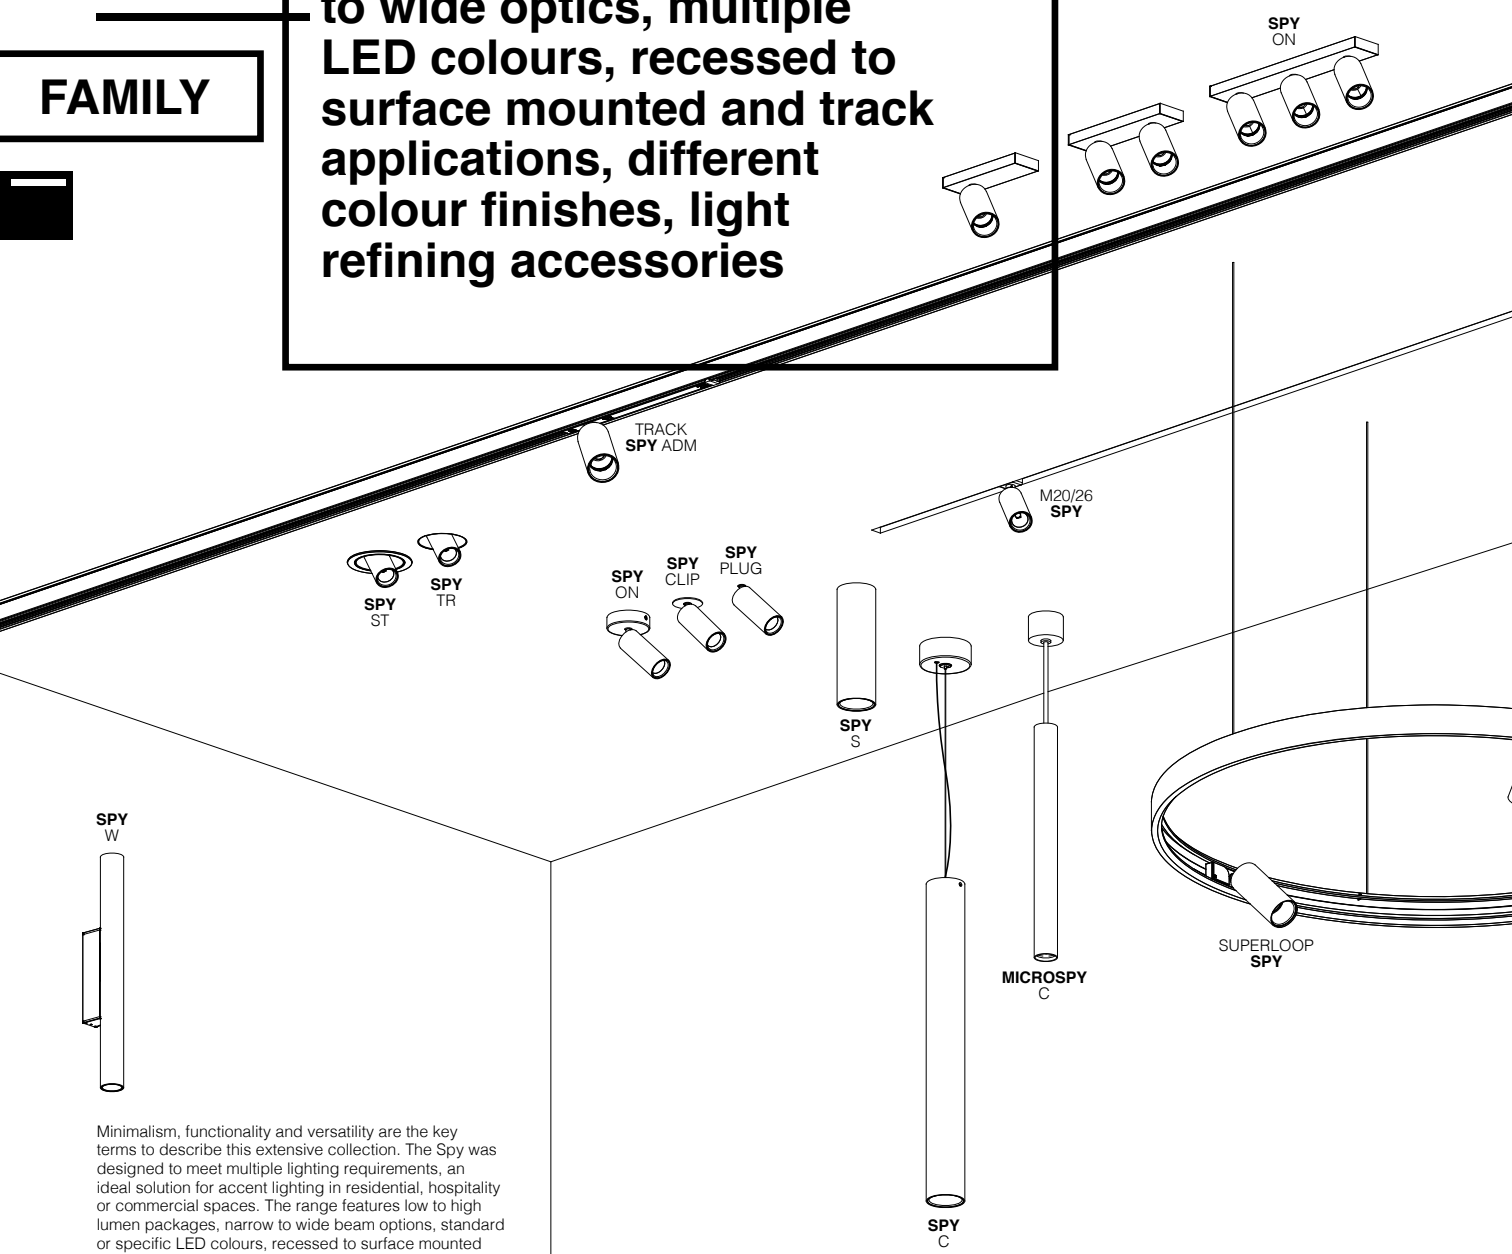
SPY

FAMILY

Low to high output, narrow to wide optics, multiple LED colours, recessed to surface mounted and track applications, different colour finishes, light refining accessories



Minimalism, functionality and versatility are the key terms to describe this extensive collection. The Spy was designed to meet multiple lighting requirements, an ideal solution for accent lighting in residential, hospitality or commercial spaces. The range features low to high lumen packages, narrow to wide beam options, standard or specific LED colours, recessed to surface mounted and track applications, different colour finishes and combinations, and can be equipped with multiple light refining accessories.

Following the constant changes in the world of LEDs and optics and the evolution to better user comfort with more precise optics and better light control, the complete Spy range has been upgraded. The result? Fresh shapes and additional finishing colours, better light comfort through hybrid optics, improved LED colour consistency and new perspectives with Tunable White and Soft Dim.
The renewed Spy family comes in diameters of 27, 39, 52, 66 and 90 millimeters, a range of spotlights to fit any purpose. While the smaller versions come in the lively colours Flemish Bronze, Flemish Gold and Gold Coloured, the bigger Spy's offer Tunable White and Soft Dim solutions in multiple beam angles.

Furthermore Spy can also be used as light unit in our **▲IR** range, a toolset that combines light and ventilation in one.

deltalight.com/spy

With Spy Focus one can opt for different beam angles out of only 1 luminaire, as the circle of light can be widened or narrowed by rotating the front of the fittings' body. As such, the beam angle can easily be altered from spot to wide flood and everything in between.

RAND

Rand is a longstanding classic in the Delta Light collection, confirming the company's philosophy for timeless design. Avoiding visible screws, Rand offers you a stylish and highly flexible lighting solution for both residential and non-residential projects. As a full LED version, Rand combines ecology and esthetics, and guarantees a perfect balance between lighting quality and energy efficiency.

SUPER-OH!

FAMILY

A series of slim black rings floating through space, finished either with integrated powerleds or the more retro-look version with classic light bulbs. The Super-Oh can also be combined with Delta Light's Wireless Control Dimming module, allowing you to manage your Super-Oh from your mobile device.

SUPER-OH!

SUPER-OH! XS
With its 25cm or 39cm diameter, the Super-Oh XS (Extra Small) can be considered to be the “little one” of the family. With only 5cm height, this perfectly curved circle holds a polycarbonate, hiding an intense clustered inner circle of the latest powerleds. This circle of leds is specially designed to guarantee a uniform and perfectly balanced light output, resulting in a very enjoyable diffuse lighting effect.
The Super-Oh XS is available either for direct mounting, as a suspension or with a pivot, a flexible ceiling bracket enabling the user to tilt the disc up to 45°, and rotate 360°.

super-oh! trimless
To keep a consistent design code throughout your project you can also integrate a trimless Super-Oh. The result is a fully recessed, slim aureole.
A symbol of infinity, without beginning or end, perfect, the ultimate geometric symbol seamlessly integrated into architecture.

SUPER-OH! SLIM

Evolving from our existing Super-Oh! family, Super-Oh! Slim stands out in design and efficiency. With a width of only 44mm and a luminous efficacy up to 119lm/W, this family of halo's combines slender elegance with big performance. Super-Oh! Slim comes in 2 diameters - 800mm and 1200mm - and is available with only direct light or a combination of direct and indirect light. Two different designs allow you to either opt for clean lines in a soothing setting or either go for a design statement by choosing Super-Oh! Slim with an integrated powerbox. Apart from its functionality, the integrated powerbox acts as a rebel element, disrupting the perfect geometrical circle of light and adding a peculiar touch to the project.

SUPERLOOP

A luminaire can be more than light alone. It can be functional, it can be decorative, it can be an eye catcher. This family not only exists out of circles of light, it also brings circular and squared low voltage solutions for track lighting, so general and accent lighting can be combined within one family. In this way, Superloop allows you to choose 'functional', by mounting adjustable Spy modules on the round or square shaped base.
It allows you to choose 'decorative', by mounting the light emitting circle in a horizontal way, or it allows you to choose 'eye catcher', by carelessly hanging the circle of light vertical, as a statement.

SUPERLOOP MDL PATENTED

Superloop is also available in a round or square shape with a Delta Light custom engineered 48V low voltage track on the inside. This allows you to position and move light modules all around, offering maximum flexibility and allowing you to meet any need of the project.
The modules enable you to move from subtle functionality to very expressive or timeless elegance. The Flemish Gold and Flemish Bronze finishes or the Spot modules Vizir and Hedra offer you a way to upgrade the minimal appearance of the loop. By adding the Fix modules with down- or down-up light, combined with a clear or frosted glass, you can transform your Superloop into a modern chandelier. Looking for a more expressive and unique statement? Just plug and play with the ledtubes of the XY180 collection.

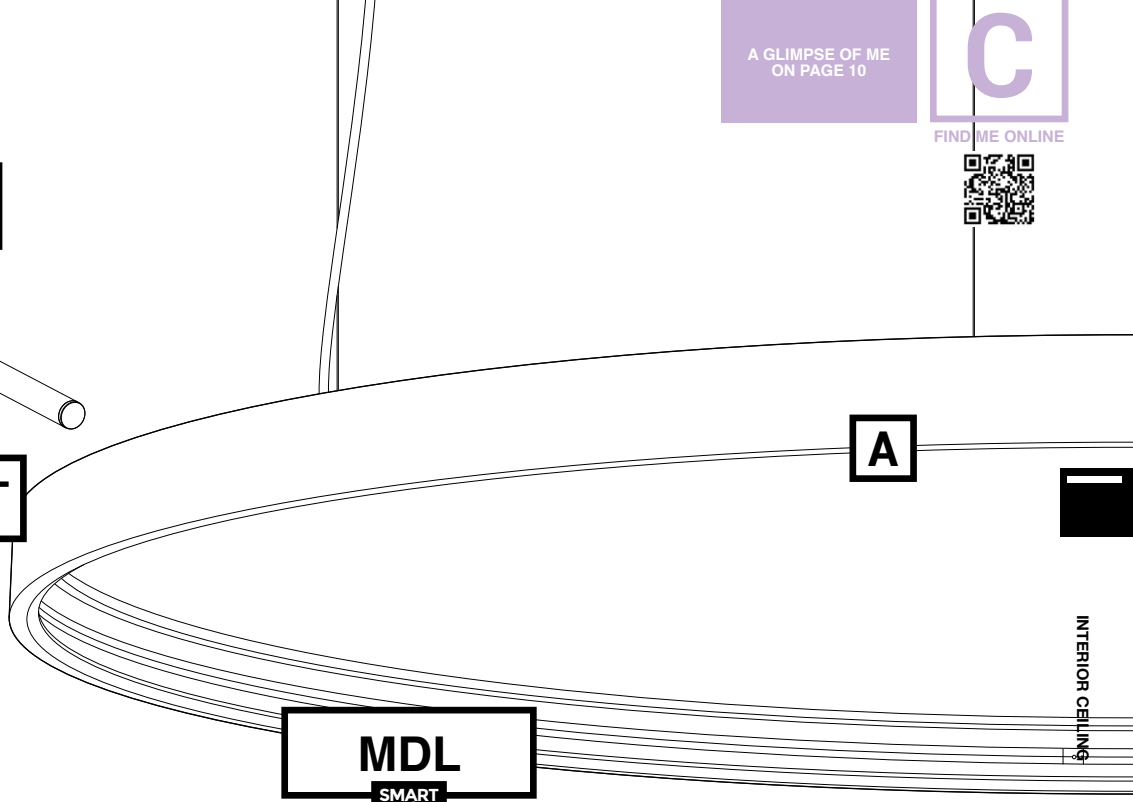
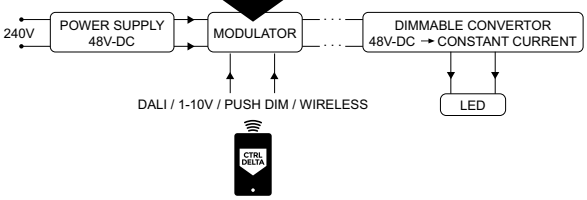
DOWN



MDL

SMART 48



The carbon conductors inside the profile not only suffice for 48V power, Superloop MDL can also be dimmed with Smart 48.
It collects the power from the 48V power supply and combines it with a DALI, 1-10V or Push Dim input to send to the dimmable 48V converter in the luminaire. In this way dimming can be done by only using 2 wires - for both power and dimming - or it can even be done wireless when choosing for the Wireless Dimmable Modulator, based on CTRL DELTA.

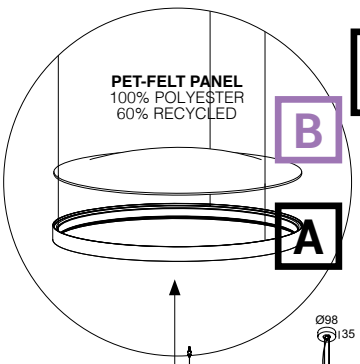
SUPERLOOP SBL PATENTED

Superloop HC with circular light has the ability to diffuse light all around. It represents a universal symbol with extensive options, a perfect circle of light, rolled out of 1 aluminium profile and seamlessly welded together. The specially designed current controlled LEDflex inside Superloop SBL allows it to be dimmed in various ways. Diameters up to 1700mm and finishes in different colours let you create the setting you want.
Similar to Superloop SBL HC, but more dramatic in expression, Superloop SBL VC grants the opportunity to use light in a different way. The vertical circle of light draws the attention and stimulates creativity.
For a more bold and expressive application you can opt for the Superloop VR, mounting the circle of light with a steel rod. Sculptural in presence, resonating with symbolism and respecting pure minimalism, the Superloop VR offers a very airy and remarkable element to your interior concept.
Either as a single version or in a sequence to create striking vertical effects.



PLUS
Add a personal touch, improve acoustics or make a decorative element out of the minimalistic circle

SUPERLOOP SLIM

Superloop Slim further explores the boundaries of circular general light, as it offers three different ways of diffusing light around a room. Within its small size, Superloop Slim hides away a specially designed current controlled LEDflex, covered by a sandblasted diffuser to evenly spread the light. The diffuser is either installed on the inside of the circle, on the outside or facing downwards, providing various looks and displaying a different take on a circle of light. Opt for simple settings with one single pendant or go wild and combine different sizes, colours and versions to generate an eye-catching play of light.

SLM F

Make it your own. Our SLM26 F builds on the endless flexibility of our magnetic profiles, which allow a simple toolfree (re)positoning of the lights onto your ceiling. Now also available as stand-alone solution, you can easliy personalize the room to your preferences. Opt for simple accent lighting or combine with indirect light for the more cosy settings, your choice!

LASS-OH!

Lass-Oh! glides through the room as a snake sliding through the greensward, showing off its slim cylindrical contour in combination with the miniature LED clusters hidden inside its body. The variety in shape - straight lines, circles or curved squares and rectangles - in combination with the optional shades make of Lass-Oh! a very decorative lighting solution. Nevertheless, Lass-Oh! can easily be hung in every residential, retail or office project thanks to its low-glare LED dots that are hidden away into the profile.

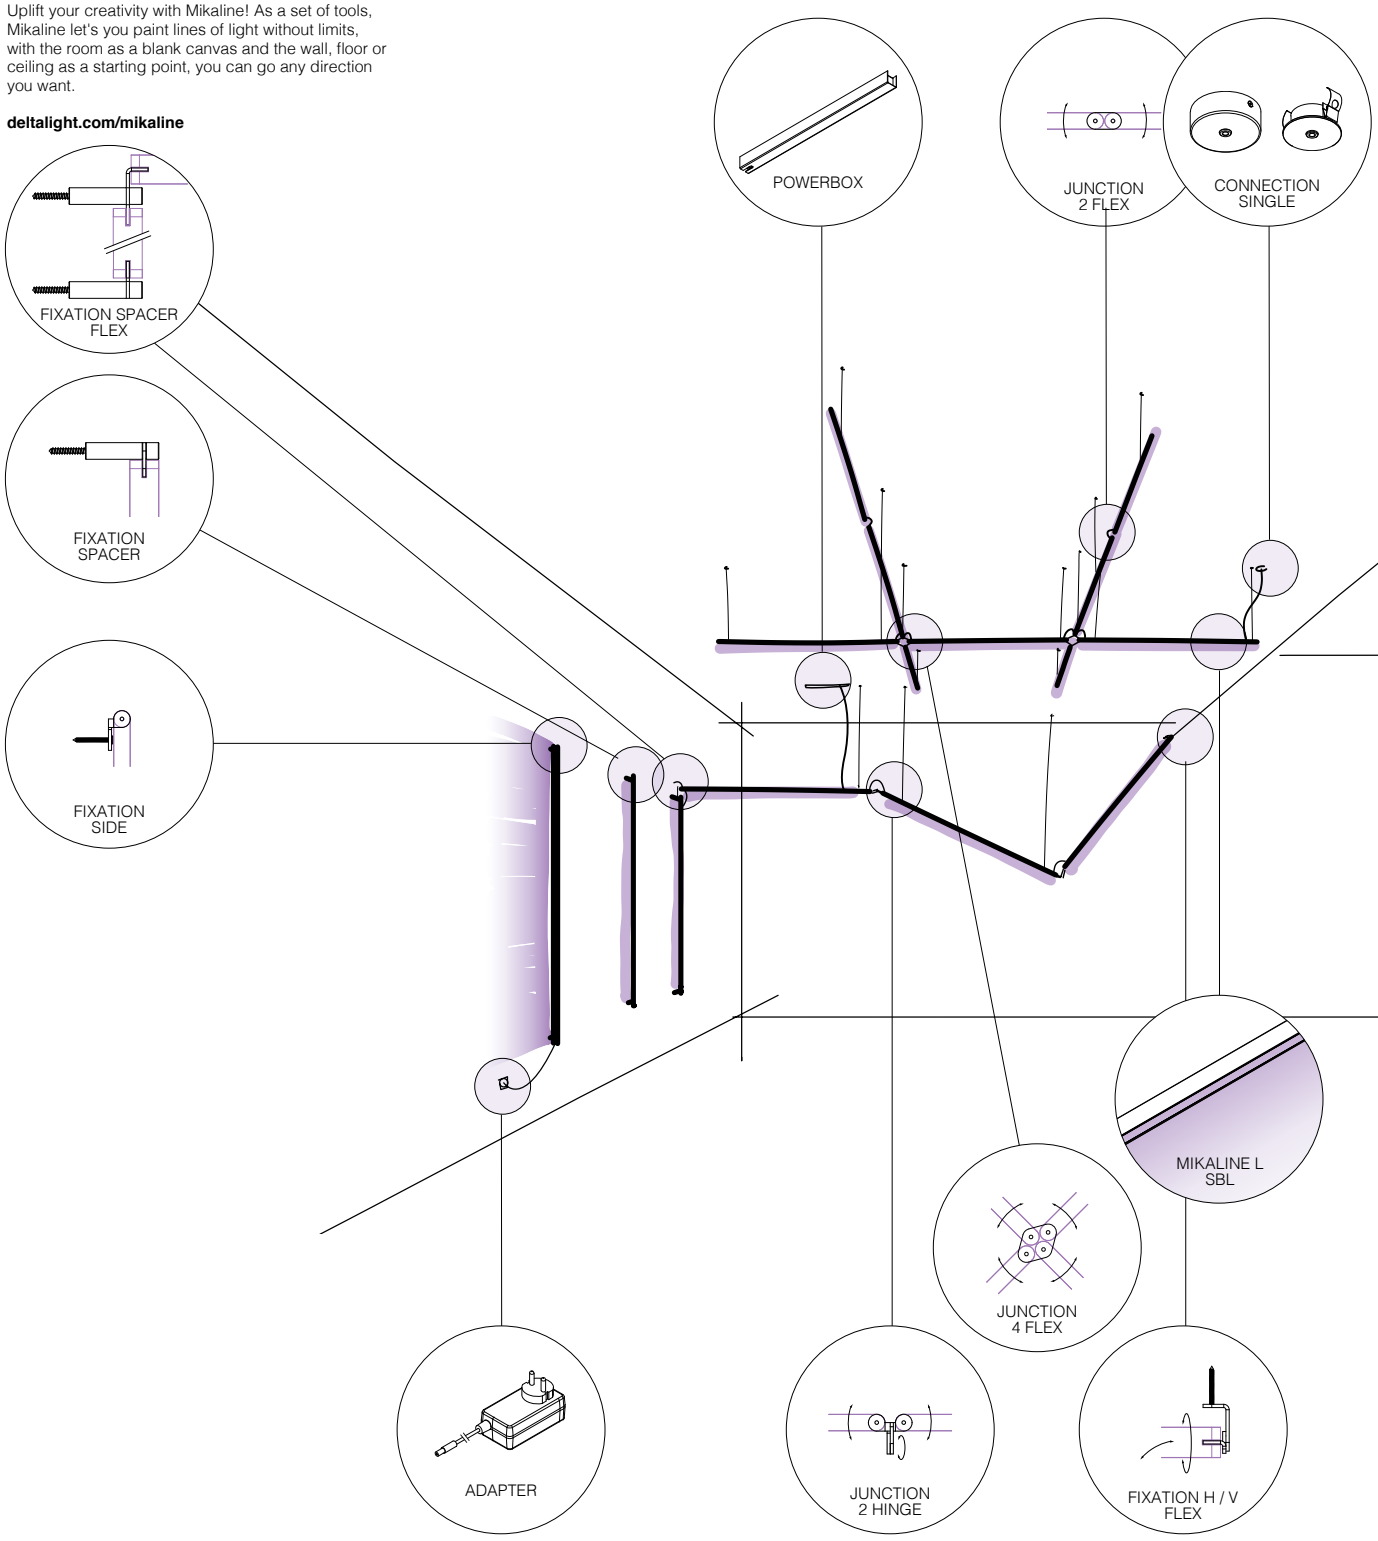
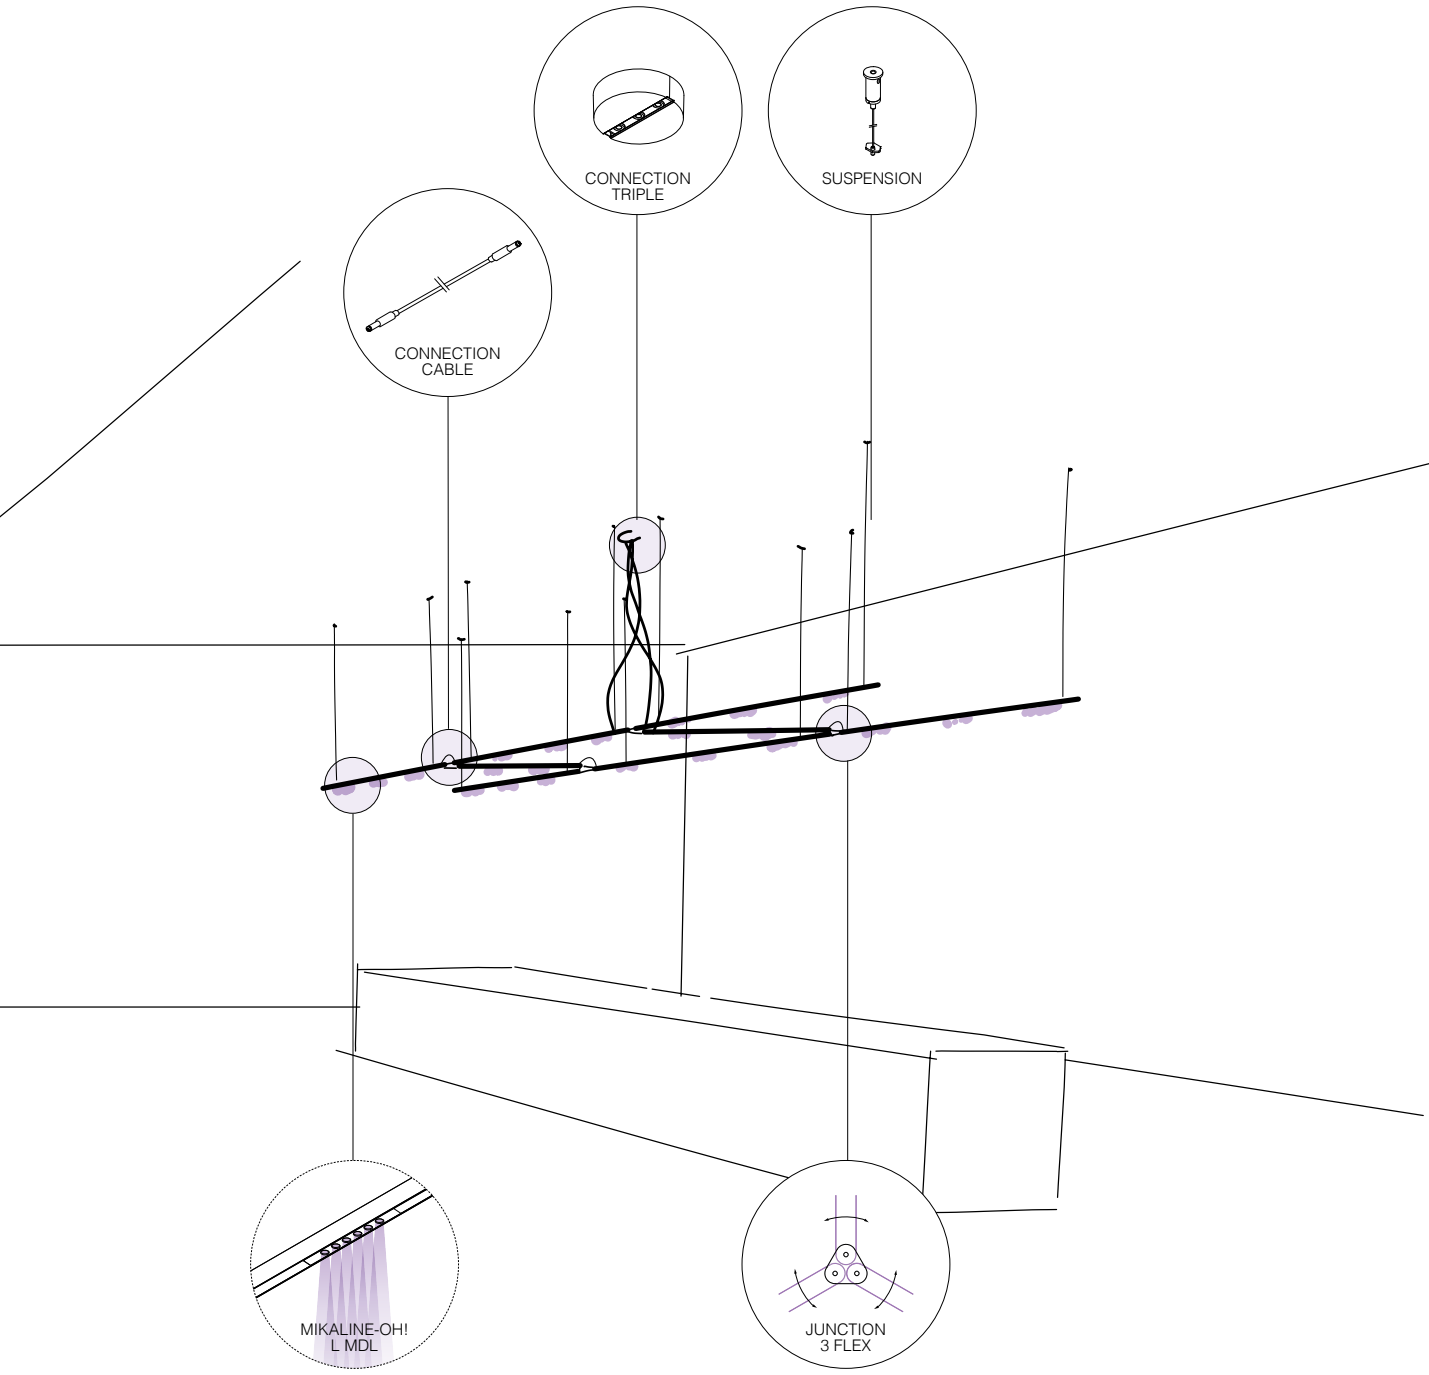
MIKALINE

Uplift your creativity with Mikaline! As a set of tools, Mikaline let's you paint lines of light without limits, with the room as a blank canvas and the wall, floor or ceiling as a starting point, you can go any direction you want.

deltalight.com/mikaline





Like brush strokes on a blank canvas...

MIKALINE

The toolset consists of a range of profiles with sandblasted optics for general lighting or shielded LED dots with a low UGR for task lighting, several connectors to couple up to 4 profiles together, a handful of fixations to joint the profiles with wall or ceiling and a series of plug-in cables for an easy electrical supply of the system.

With up to 10m of profile from 1 feeding point, the 48V powered Mikaline is perfect to build structures for spacious environments and at the same time easily fits in smaller scaled rooms. Create frameworks that light up the room completely, opt for a cosy setting with only indirect light towards the wall or go for a pure linear pattern with dedicated task lighting, possibilities are endless and customizable to individual preferences.

Mikaline is not only appealing as a structure, also the design of the toolset itself is pure eyecandy. The dark black structured lines are in powerful contrast with the shiny chromed connection sets. The playful shape of the cable connectors add a joyful element into the linear patters and the options of Gold Coloured as a finish add a luxurious touch and feel to it. Like brush strokes on a black canvas.

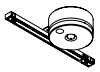
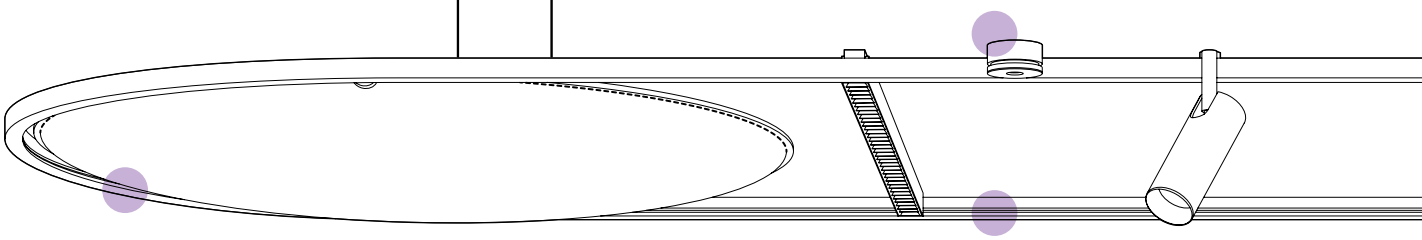
SOLISCAPE

The intention of Soliscape is to create flexible lightscapes that are responsive to the user's ever-changing needs and activities, where design is no longer imposed by the designers, but guided by the user, resulting in responsive and adaptive design. The Soliscape system combines miniaturisation and personalisation, in a unique design language.

deltalight.com/soliscape



SOLI-SENSE
The Soli-Sense module is key in the user-centric approach of Soliscape,
as it captures relevant data from its surroundings that serve to interact with the modules of the system or – by extension – with the complete Building Management System.
Detecting presence, adapting the light intensity based on incoming daylight, adjusting the HVAC system according to the temperature, humidity and air quality in the room to obtain an optimal user environment are some examples.
By integrating all modules in our Smart Q environment, Soliscape becomes the basis that interacts with all smart systems in its surroundings.



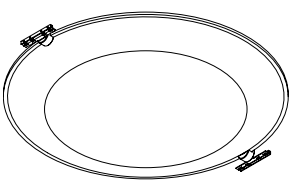
SOLI-SHHH
For additional optimization of room acoustics, Soliscape enables you to combine user focused lighting with Soli-Shhh panels. The sound-absorbing panels can easily be added or removed, positioned flat or tilted, guaranteeing noise reduction to office spaces and meetings rooms in the most aesthetical way.

These sound-absorbing panels are created to solve the problem of indoor reverberation to guarantee the best acoustic comfort and wellbeing.

Absorbing the noises in the field of typical speech frequencies (between 500 Hz and 2000 Hz)

These sound absorbing panels can be applied to facilitate for specific functionalities, from acoustic to decorative and illuminous atmospheric scenes.

Soli-Shhh panels can be used as an add-on to the Soliscape toolbox or as a separate sound absorbing element, be it with or without additional spot modules mounted around the circle.



PROFILE
The slender Soliscape profile is the structural base to custumize your Soliscape configurations. With dimensions reduced to 19mm x 23mm, it is minimalism at its purest, allowing you to create unique "graphical" configurations. In contrast to common track or profile suspensions, all modules are plugged in from above, maintaining a smooth appearance from below.

The linear elements can be combined with the signature Soliscape curved or 90° corners, upgrading its surroundings with dynamism and attitude.

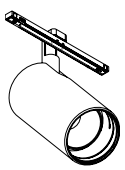
SOLI-52 / SOLI-66
The Soliscape spot modules enable you to illuminate any part of the room where Soliscape is applied. The hybrid optics guarantee a precise beam, as the lens controls and shapes the light that is reflected from the high-quality reflector. The spot modules have a colour rendering of CRI ≥ 90, or come in a CRI ≥ 95 version with Delta Light's unique Natural Light Technology (NLT), state of the art LEDs with a spectrum that very closely matches that of the sun. That includes a broader spectrum, which is preferable for the human eye and brings out the vibrant colours, and an enhanced cyan energy, boosting the human activity. As so, helping to control the circadian rhythm to further stimulate the human well-being.
The Soliscape spot modules makes its connection on the top of the profile, keeping a very clean and refined appearance without compromising on flexibility and performance.

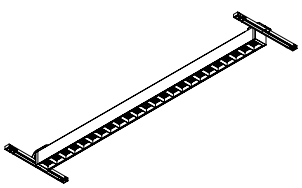


SOLI-FORM
The core strength of the Soli-Form is a combination of Delta Light's Melanopic Light Technology (MLT) with high efficient louvre optics. The reflector is designed to perfectly embrace every individual LED module in a way to boost the efficiency of the complete luminaire, while maintaining a high level of visual comfort, as every LED dot is shielded from being looked into.

The Soli-Form profile breaths refinement in all its aspects. Its slender dimensions of 28 by 28mm weld in seamlessly with the slim dimensions of the Soliscape. The human aspect is the central topic for Soli-Form. It offers LEDs that help control the circadian rhythm via a unique spectrum meant to stimulate activity. The high quality LEDs provide a very natural white colour with a higher amount of energy in the cyan region, helping you to be active during the day and encourage sleep at night.

Despite its minimalistic design, Soli-Form does not compromise on performance. With a delivered lumen package downwards of up to 3045lm per meter, Soli-Form is perfect for illuminating task areas like office desks or reception counters. Within the same dimensions one can also opt for a down-up version, enhancing the sense of space and creating a uniform glow on both vertical as horizontal surfaces, which leads to a reduced contrast and relaxes the eye.

The Soli-Form profiles can be positioned alongside the structure or across, connecting both sides.



SOLI-LINE
Apart from task lighting and focused accent lighting, Soliscape offers linear solutions for general lighting as well. In line with the complete set-up, the design is minimalist and straightforward. Installed in line with the profile or connecting two opposite profiles, these straight lines are finished of with a sandblasted optic to diffuse the light around the room, both as down- or uplight.

INFORM

A WORKING TOOL
The Inform family is an extensive range of linear and curved lighting solutions, designed to be used in applications that include task areas, like landscape offices, meeting rooms, reception desks, home office,… Areas which need technical architectural lighting at its best: eye for design, eye for the user and eye for performance.
The base of this family is a combination of Delta Light's Melanopic Light Technology (MLT) with high efficient louvre optics.

ULTIMATE VISUAL COMFORT
Different from the fluorescent tubes, a LED array is build up out of multiple LEDs. Therefore, the reflector is designed to perfectly embrace every individual LED module in a way to boost the efficiency of the complete luminaire while maintaining a high level of visual comfort as every LED dot is shielded from being looked into.

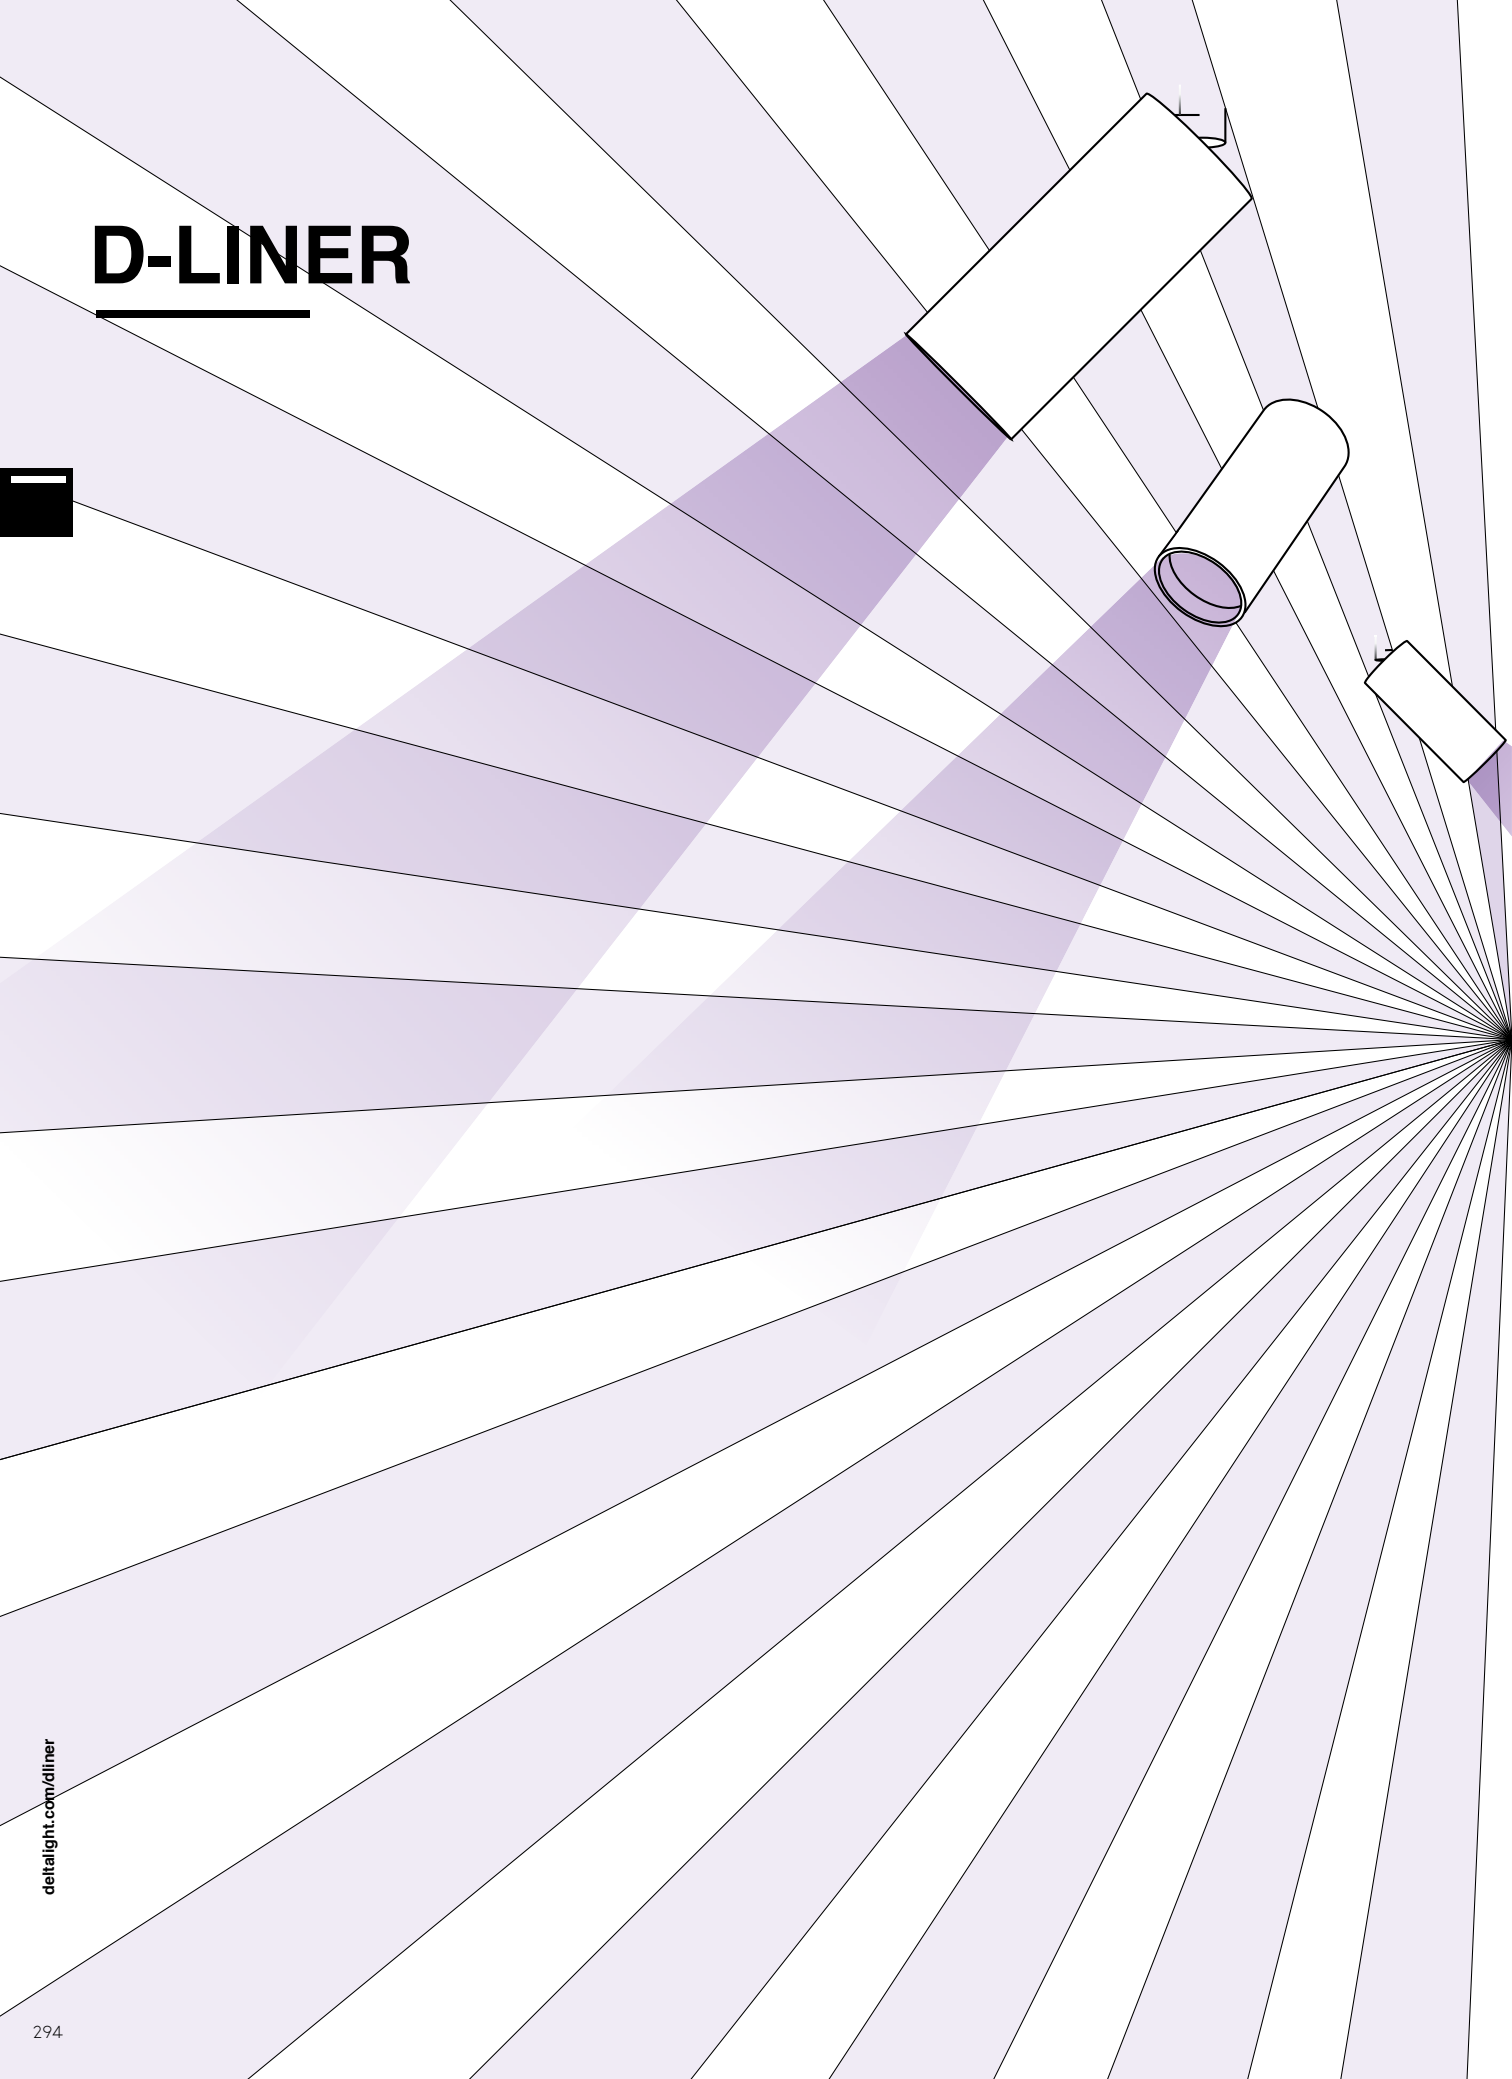
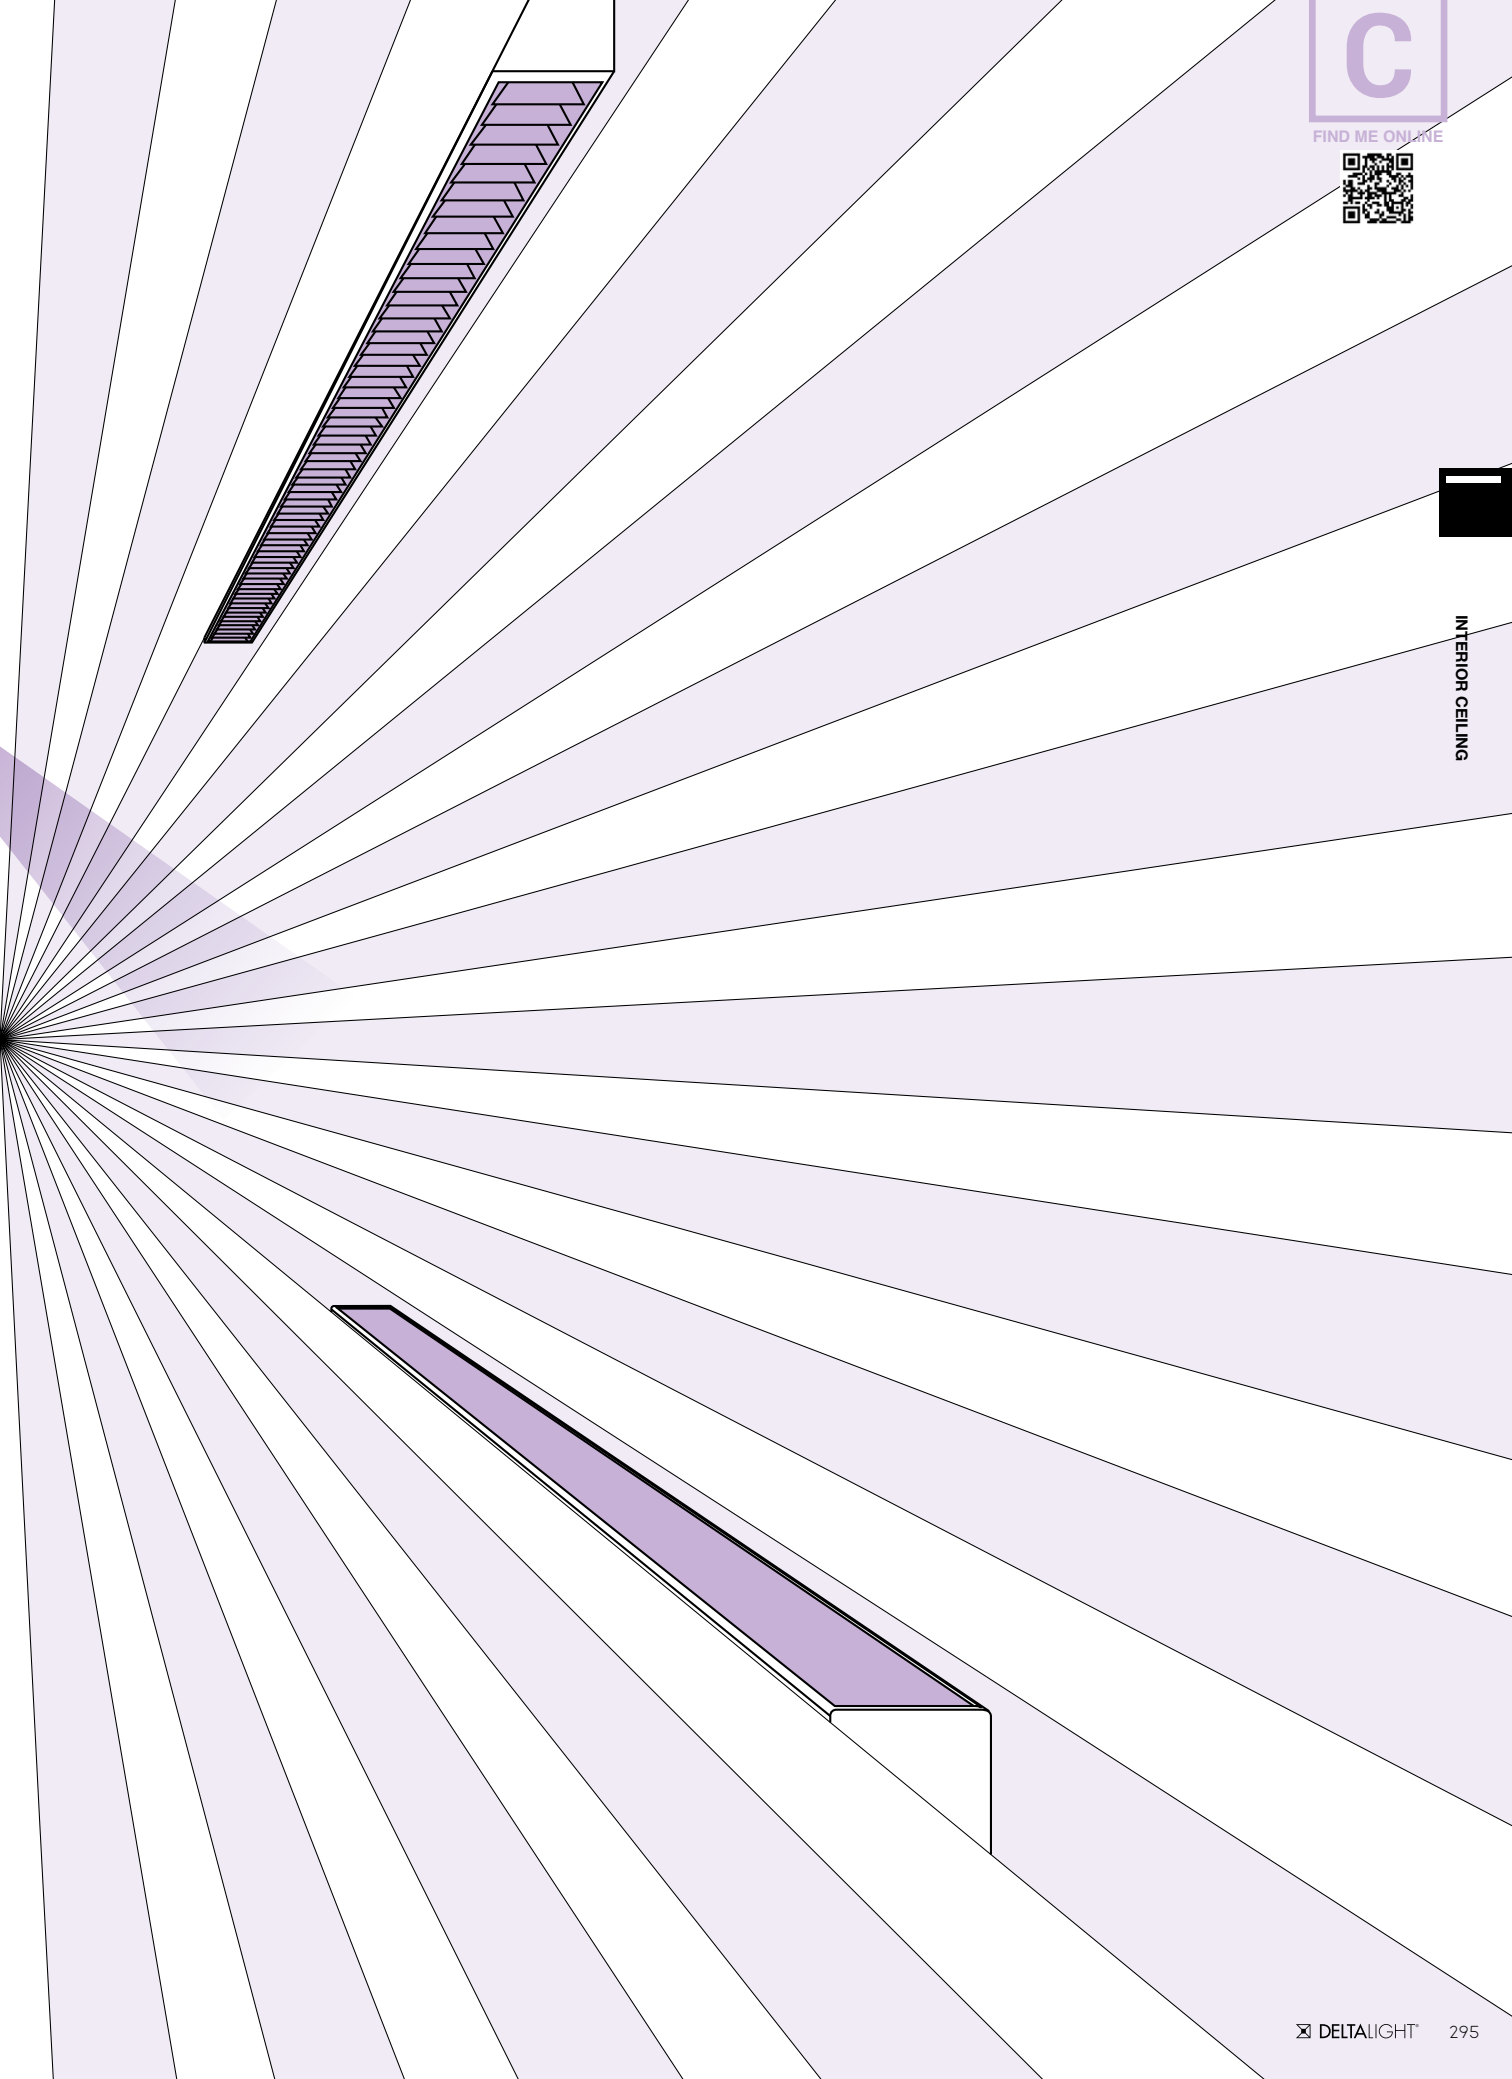
D-LINER



deltalight.com/dliner



for climate ceilings & acoustic ceilings

D-LINER

Every year, regulations on building and renovation get stricter in terms of energy-efficiency, eco-friendliness and sustainability. Apart from lighting, this also impacts cooling and heating, ventilation, acoustics, … As a consequence, trends and challenges arise to combine lighting with ventilation, acoustics and technical or smart ceiling solutions.

Two examples of high-end technical ceilings are the SAPP ceiling of Interalu and **HeartFelt** ceiling of **Hunter-Douglas. SAPP** stands for Smart Acoustic Passive Power, it combines an aesthetic design and optimal acoustics into a climate-control ceiling. The HeartFelt ceiling is a felt ceiling system with great acoustic characteristics. Both ceiling systems build on modularity and allow for a linear lighting solution in between or in line with the panels.
With D-Liner, Delta Light offers 3 types of lighting solutions that match these ceiling types.

CONFORM

NLT - NATURAL LIGHT TECHNOLOGY

Conform uses Delta Light's Natural Light Technology (NLT),state of the art LEDs with a spectrum that very closely matches that of the sun. That includes a broader spectrum, which is preferable for the human eye and brings out the vibrant colours, and an enhanced cyan energy, boosting the human activity.

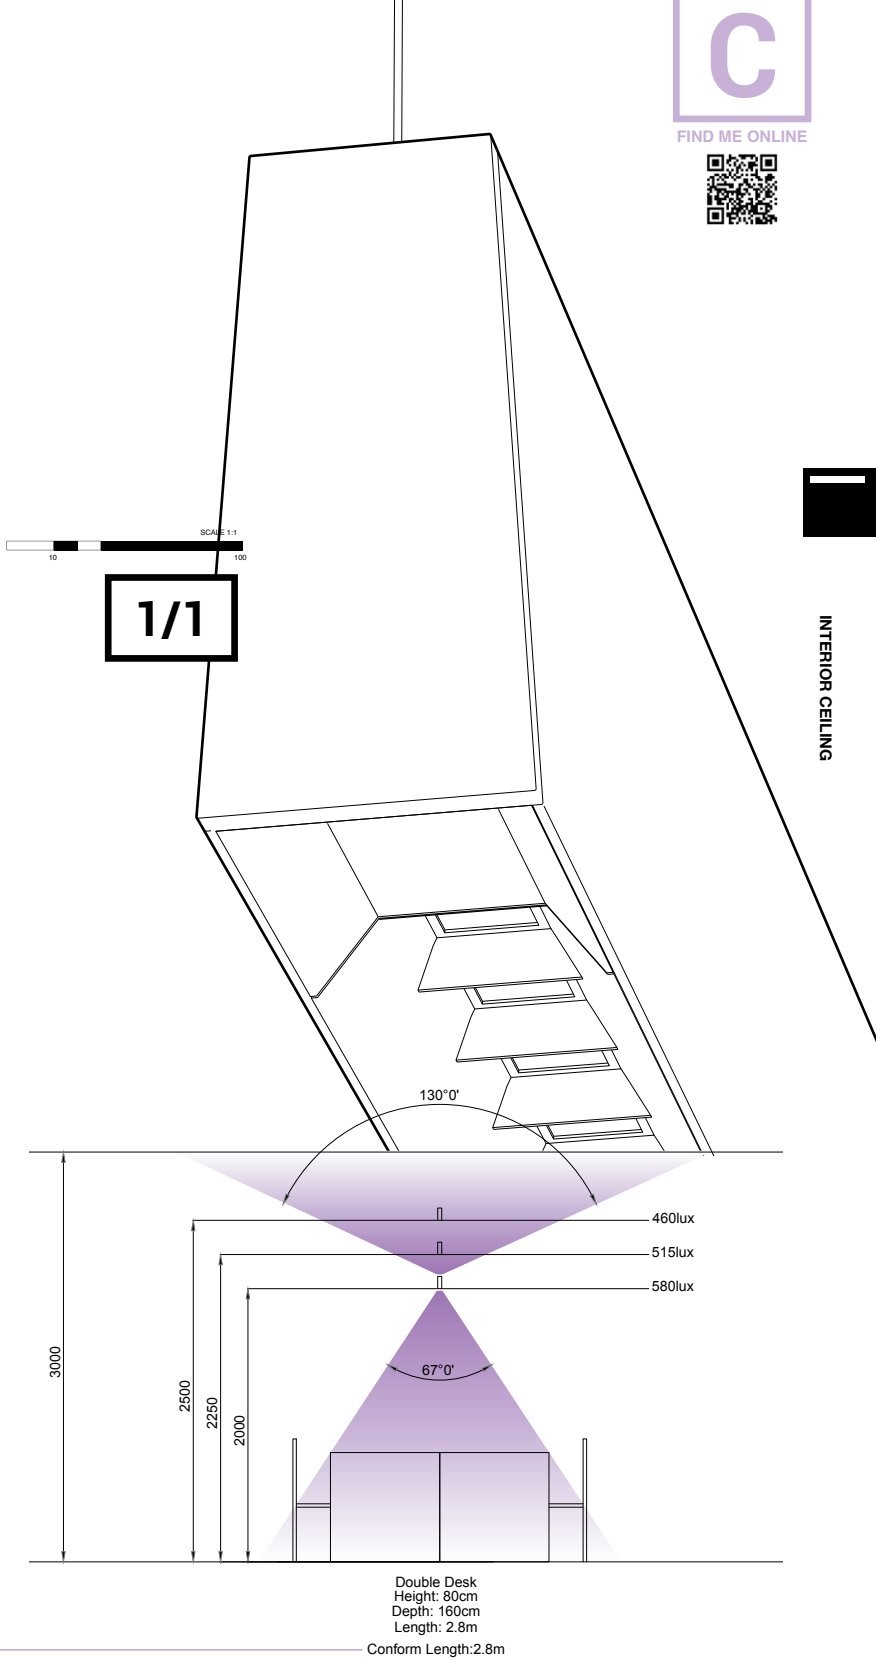
A



Design by **DEAN SKIRA** & Delta Light

Its elegant design with multiple colour combinations, its specific sun-mimicking spectrum, its low UGR, its well balanced down-up ratio…we do not exaggerate: Conform is the goddess of office lighting!
Conform is designed around the light. It not only perfectly embraces the light source, it reinforces it in multiple aspects. Conform uses Delta Light's Natural Light Technology (NLT),state of the art LEDs with a spectrum that very closely matches that of the sun. That includes a broader spectrum, which is preferable for the human eye and brings out the vibrant colours, and an enhanced cyan energy, boosting the human activity.
As so, the LEDs used in Conform help control the human circadian rhythm.
To further stimulate the human well-being, Conform uses a down-up ratio of 55% to 45%, as a combination of direct and indirect light is recommended against eye strain. Every downwards facing LED is perfectly embraced by specially designed reflectors, resulting in a beam angle of 67° that enlightens the task area but has no direct impact on the eye.
Additionally, the uplight is being spread over the room to enhance the spacial effect and to create a uniform lighting scheme, thanks to the inhouse designed lens extrusion to create a wide batwing beam angle without an intense peak in the centre.

ONE-AND-ONLY

A peculiar profile, both functional as decorative. The design of the body allows you to have up to 5 lines of light out of 1 profile, 3 for direct and 2 for indirect lighting. The soft glow of the light along the sides of the profile makes the One-And-Only float through the air, a powerful blend of light for an eye-catching look.

GIBBO

Gibbo is a decorative pendant with a base positioned under a predefined angle, as such the globe appears to be rolling away. The glass is handblown and is available in transparent, opal or amber shades. The golden brown colour gives the Gibbo a warm presence, which makes it attractive in compositions above tables and in interiors with warm accents and materials. The base of Gibbo is available in black or white.

STILL

Design by **NATHALIE DEWEZ** & **Delta Light**

The work of Nathalie Dewez extends from small objects to monumental installations, from unique pieces to industrial products. Her presence at numerous international shows and exhibitions has led to collaborations with a number of architecture practices as well as international producers such as Hermès (FR), Habitat (UK), Ligne Roset (FR), De Castelli (IT) & Vervloet (BE).

Nathalie is a designer whose main medium is light and whose materials vary between metal, glass and other long-lasting medium, whether designing light fixtures, objects, furnishings or large-scale sculptures.
Her designs reveal the passion for sculptural shapes and superior craftsmanship. Some of her iconic pieces have been awarded several times. In 2011 she received the 'Design Pierre Bergé Foundation' award and the same year she was nominated Belgian Designer of the Year.

MILES

Miles is pure eye-candy.
A collection of 4 purely handcrafted glass shapes, each in 4 different colours (pink, amber, smoke or mist), each recognizable yet unique in all respects.
A family of suspensions that play on the visual contrast between the coloured and white blown glass, combined with different shapes and colours, also ideal for multiple compositions.

All shapes and finishes are inspired by the interplay of opacity, translucency and transparency.
Its translucent or milky forms and dynamic light offer a countless number of scenarios.

When switched off its transparency makes MILES almost disappear. When switched on they provide a cozy and stylish luminous presence, stimulating senses and perceptions.

MANTELLO

With its timeless and inviting look the Mantello Pendant is well-suited for both home decor and professional environments. Hang a few Mantello pendants in the kitchen, place the smallest one each side of the bed, or create a playful configuration above the reception counter and start enjoying the right lighting atmosphere.

Starting from a circle, the bell-shaped design of the Mantello was inspired by both 80's Memphis shapes and early industrial characteristics. A modern interpretation of recognizable and traditional forms, available in two sizes and two diameters.

Derived from the lampshade as an archetype, the 4 shades evolve from a dome shape into a flat disk.

CUPPA

The Cuppa family has been designed as a welcome add-on for our magnetic profile range, extending the possibilities within this collection with decorative pendants. As a basis, Cuppa offers 4 attractive shades to be used as an ornament on a suspended LED module. But in total the possibilities with Cuppa are endless, as multiple shades can be added onto 1 single module, giving the user complete flexibility of designing the product he or she envisioned.
Derived from the lampshade as an archetype, the 4 shades evolve from a dome shape into a flat disk, all of them purified up to the final details. Details like diverging radiuses, altering heights and aligned colour finishes all contribute to the consistency of Cuppa as a decorative family.
Play with lines and contours, as all shades perfectly fit onto the LED module. Combine multiple shades into an attractive object of light or go for single shades to create a calming mood.

SOIREE

The Soiree range was designed to be voluminous, lightweight and transparent. Its sophisticated form creates a dense and decorative effect, filled with a warm light. The interaction between the pure circular and rectangular forms, with the warm light sources and the symmetric configurations, triggers a dynamic tension. Soiree takes its inspiration from many angles. From the play of light and shadow in architecture, to natural light effects, the shape of everyday objects and sculptural art. The result is a nest of light, made of circles or rectangles, both structural and decorative, generating a seductive luminous effect. Even when not turned on, they bring texture and character to rooms, defining different areas with small and large contemporary pendants. The Soiree is an entire family of versatile suspensions for large or small spaces. Both the round and rectangular versions come in multiple sizes and 2 colours – black or Flemish Gold. In both shapes one can choose for a milky-glass sphere at its center, or opt for an E27 bulb. The blown glass diffuser in the centre offers subtle nuances thanks to its satin-like finish, in contrast with its more expressive outer cage. One Soiree suspension makes a bold statement by itself, when combined in a cluster of pendants it can create a more monumental installation.

ZOOVER

Zoover pretends to be heavy seen its size, nevertheless it looks very lightweight when hung into the room. Designed as a shallow dome, Zoover has multiple different looks depending on the point of view. Looking at it from aside, the thermoformed shell has a very neutral appearance. Only when lowering the viewpoint, more and more details catch the eye, as the light illuminates the inner textures of the scallop.

Zoover can be used for general lighting, with soft diffused light inside its dome, or to create a more cosy atmosphere, by hiding away 4 spotlights under its shell to create various accents inside the room. Available in two sizes and two colours for the shade, Zoover adds volume, depth and texture to the room. Furthermore, the PETfelt used to create the Zoover dome helps to reduce unwanted noise inside the room, with better acoustics as result.

I'm not alone. You can find me & my family members in other chapters within this Lighting Bible.

HELI 1

As a small wall recessed luminaire, Heli is perfect as a guidance light. Be it in a corridor or as a safety light for the steps of your stairs at night, Heli does the trick. Also outside, Heli X will guide you the way.

GYN W

Gyn W serves as pure lighting pleasure. An invisible luminaire, as the gypsum body integrates completely into the wall. By finishing off this gypsum luminaire with any desired colour you want, Gyn disappears in its surroundings with an atmospheric indirect light effect as result. All you see … is light!

LOGIC W

As a family of guidance lights,
Logic W exists out of small and large wall luminaires to be installed slightly above ground level. As such, they provide a soft glow on the floor to guide you along pathways or in corridors, both in- and outdoors.

INLET

Our traditional Inlet is a very popular wall recessed fixture for guidance light in hallways and staircases. As a more modern approach, Inlet Trimless is added to the family.
While Inlet Trimless XS generates a narrow beam of light that produces a triangular shaped light effect on the floor, the bigger versions come in a Low or High design that create gentle fields of light on the surface.
Available in White, Black or Gold Coloured, these guidance lights are perfect for usage in residential applications.

MONTUR

With Montur we offer a highly original interpretation of an archetypical concept: a light source that is contained within the framing of a 3D square or rectangular shape. The Montur is available in indoor and outdoor versions, as a ground, wall or ceiling fixture, with LED clusters or filament-LED lamps with a rustic look. The series integrates beautifully in both country-classic and contemporary homes, and is suitable for hotels and public buildings as well.

The Montur not only breathes new life into a classic concept, it also adds a detailed element of refinement. The sharply profiled framing in aluminium is utterly devoid of welding seams. For both the indoor and outdoor versions, there is a choice of finishing with either hand pressed transparent or opal glass. The opal glass version contains a milky, cone shaped core, with a transparent glass surface, creating a pleasantly diffused light that gives the lamp extra cachet.
The indoor version of the Montur is also available as an open cube, with one or two bulbs, or in a rectangular shape with a powerful LED cluster concealed behind a protective cover in polycarbonate. By using them as outdoor fixtures, you can extend your lighting style into the garden or parking area. The outdoor versions are available in the same models as the indoor ones, but always feature a protective cover in glass or polycarbonate. There is also a bollard version, with a choice of various heights.

OONO

How to describe Oono in one sentence?
'A soft glow of light during golden hour, at the end of a sky-blue summers day…'

That's one way. But there is more to the sophisticated Oono than just its gentle embracing glow. Built in first instance as a family of exterior products, Oono is a family of dualities.
It combines elegant looks with a warm diffused light effect. It couples the sturdy look of metal with the pureness of glass.
It unifies exterior and interior, as the range offers IP-rated solutions for outdoor with staraightforward surface mounted and pendant luminaires for indoors.
It unites a play of straight lines with perfect circular shapes. It merges black and white, by adding a touch of gold.
It brings together the shimmer of dusk with the fresh start of dawn.

BAND-OH!

Shape your wall into a piece of art. The layers of light generated by Band-Oh! provide a sense of depth onto the surface its being installed on. The light not only hits the wall for a V-shaped down-up light effect, it also creates a play of light on the fixture itself. the design of Band-Oh! is made out of several shells above each other. An overlap between 2 layers shieds the light source, while its openess leaves space for reflected light to escape. The result is a soft glow of light on the inner shell of Band-Oh!, generating an optical illusion of the outer shell freely floating around it.

While the double finish in two shades of black - structured matt and shiny Piano Black - enhances the layered feeling, the finish in Brushed Old Bronze gets an extra layer of richness thanks to the soft glow lighting it up.

WANT-IT

Want-it is a vivid range of wall luminaires. The streamlined and timeless design of the Want-it gives it a very flat and low-impact appearance, with no visible screws. The slightly curved edges provide a subtle twist to the design, while also creating a nicely delineated light pattern on the wall.
The Want-it comes in a square and rectangular shape in all white or a more decorative black and matt gold combination.

ORBIT

As a Design Plus Award winner in 2000, the Orbit has been a favorite in the wall mounted range of Delta Light for many years. This wall mounted family comes in two versions, Orbit, and Orbit T.
Orbit combines a couple of LEDs with a lens for up- and downlight, which results in a distinctive light pattern on the wall. Finished in either standard lacquered finish or with the typical Punk look.Orbit T is a unique, see-through luminaire. The flexible LED around the hollows inside of the luminaire also results in a pleasant down-up light effect.

HEDRA

Hedra adds refinement, finesse and colour to the range. Next to black and white, Hedra W is available in a Gold Coloured and Black Bronze finish. The faceted design of the Hedra captures and reflects the ambient light with an ever-changing look as result. It is the typical design element of the Hedra family, which also includes a series of pendant and spotlight luminaires.

VISION

Since its launch Vision has already won multiple awards, thanks to its impressive and nicely delineated parabolic light pattern on the wall. This classic is available both for indoor and outdoor use. Vision thanks its powerful light effect to the combination of LED technology in combination with a lens, giving its unique design and playful light effect

BACKSPACE

In many ways, Backspace II is a joy for the eye, be it by its slender design, by its pleasant light effect or by its playful colour combinations. Backspace II is designed to create a 2-way light effect on the wall, the choice to install it in a horizontal or vertical way is up to you.
By mounting the light source in the front part of the luminaire, it is perfectly shielded from looking directly into the source. Backspace II can be used for interior lighting in a white, grey or dark grey finish or for outdoor settings in grey or dark grey. An additional touch of colour can be added to the luminaires by opting for an extra golden reflector.

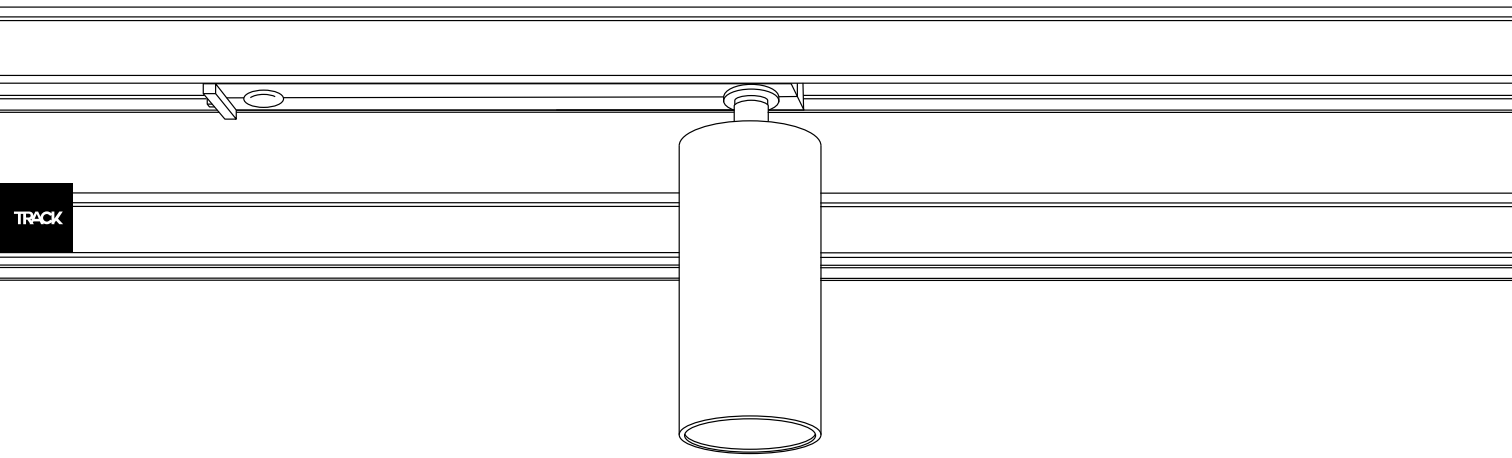
* TO BE USED AS NON DIM



Minimalism, functionality and versatility are the key terms to describe this extensive collection.
The Spy was designed to meet multiple lighting requirements, an ideal solution for accent lighting in residential, hospitality or commercial spaces. The range features low to high lumen packages, narrow to wide beam options, standard or specific LED colours, recessed to surface mounted and track applications, different colour finishes and combinations, and can be equipped with multiple light refining accessories.

Following the constant changes in the world of LEDs and optics and the evolution to better user comfort with more precise optics and better light control, the complete Spy range has been upgraded. The result? Fresh shapes and additional finishing colours, better light comfort through hybrid optics, improved LED colour consistency and new perspectives with Tunable White and Soft Dim.
The renewed Spy family comes in diameters of 27, 39, 52, 66 and 90 millimeters, a range of spotlights to fit any purpose. While the smaller versions come in the lively colours Flemish Bronze, Flemish Gold and Gold Coloured, the bigger Spy's offer Tunable White and Soft Dim solutions in multiple beam angles.

On track, Spy is available in diameters of 52, 66 or 90 millimeters, ranging from 1500 up to 4600lm for several lighting purposes. For specific project demands, Spy offers Soft Dim and Tunable White solutions in different beam angles, ideal to create a particular mood or cosy atmospheres.

With Spy Focus one can opt for different beam angles out of only 1 luminaire, as the circle of light can be widened or narrowed by rotating the front of the fittings' body. As such, every beam angle between 8° and 43° is possible. For Spy 90 on track, the possibility of an adjustable beam angle within 1 luminaire is taken to a higher level. The technology inside LensVector's dynamic beam shaping lenses allow for a wireless adjustment of the beam angle. One can easily adjust the beam angle and the light intensity of these luminaires using CTRL Delta, as dimming of the luminaire and controlling of the beam angle can be done with all smart devices.

Easily adapts to any variable, thanks to a multitude in optics, lumen packages and dimming possibilities.

FRAGMA

No two lighting schemes are identical. Different geometries, different heights, different needs, there is more than only one factor that impacts a lighting set-up. The Fragma range easily adapts to any variable influencing the project, thanks to a multitude in optics, lumen packages and dimming possibilities.
Its simple design and its circular shape let you use Fragma throughout the project, as it blends in perfectly in any architectural environment, combining clean cut optical performance, light quality and visual comfort.

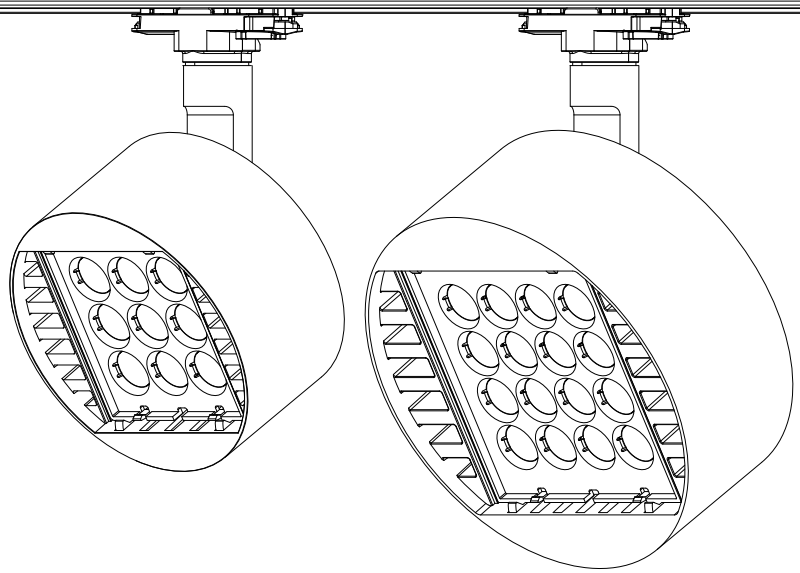
deltalight.com/fragma

DIMMING

Our Fragma luminaires can be used for simple switch on-switch off settings, but also come in different dimmable versions, be it 1-10V, DALI, with on-board potentiometer or even wireless. 1-10V dimmable Fragma spots allow for simple group dimming on track level, while our other dimmable versions can be used for individual dimming per spot. This going from individual handset dimming with the on-board potentiometer version, over the Dali addressable version controlled by a Dali master, till the wireless version based on CTRL Delta, offering solutions for both small and big installations. All Fragma versions require a 3 phase track. However our wireless and on-board dimmable Fragma spots do not need additional dimming wiring within the 3 phase track and in this way offer an easier approach on flexible and individual dimming.

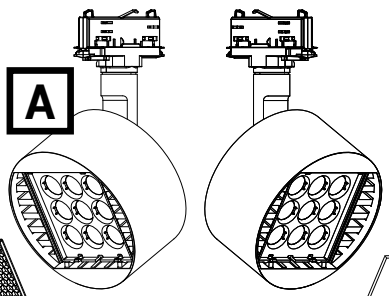
WDL

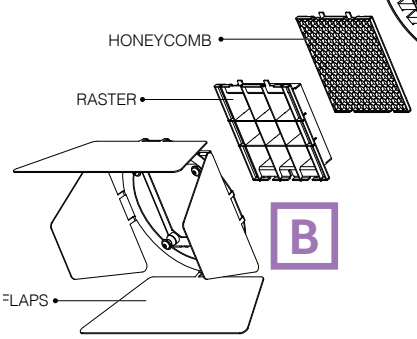
CTRL DELTA



VISUAL WELLBEING

Light is not only about light effects, it also affects the well-being of the passer-by. Good light quality is of main importance, as it influences the passer-by in an indirect way. CRI 90, good Colour Over Angle uniformity and uniform luminance on the emitting surface are some of the characteristics that let Fragma excel in light quality. In a direct way, the passer-by is influenced by the light when directly looking into the light source. To reduce the direct impact on the passer-by, Fragma offers multiple accessories to further improve its visual comfort.





Fragma is based on Delta Light's LED Caset® technology, which combines multiple LEDs with individual collimator lenses per LED to generate a clean-cut light distribution. The individual lenses create a multi-layered light distribution to generate a 8° superspot or 14° beam angle as standard. Be it for the smaller version or the high-power Fragma, by concentrating the lenses together, the light distribution will be the same thanks to the multilayering process.

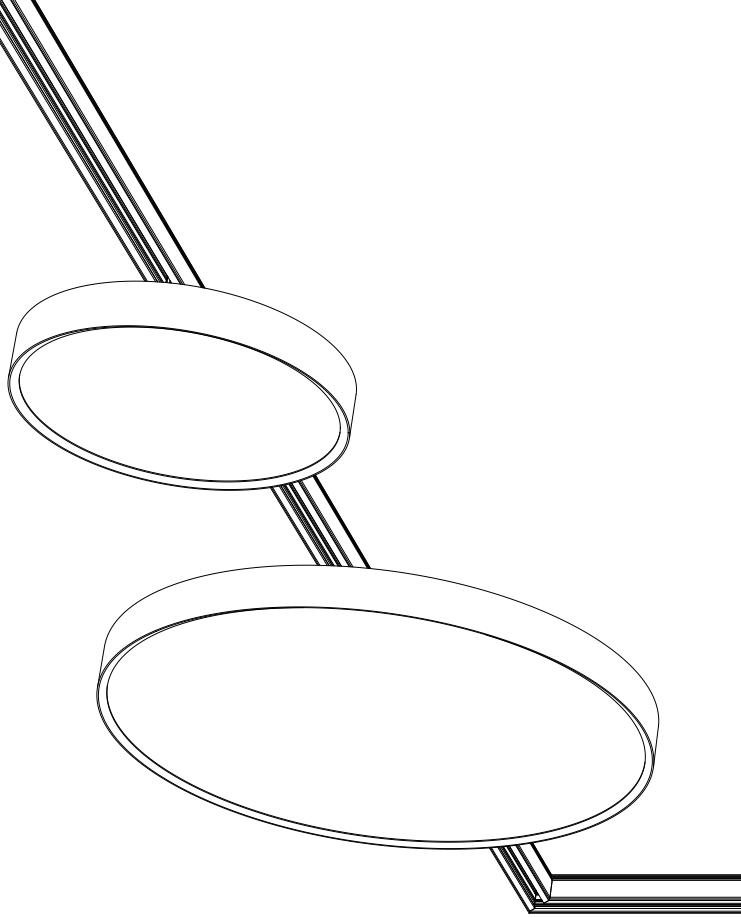
MULTINOVA



Multinova has something familiar and something fresh at the same time. As a disc of light, Nova refers to the Supernova range, as both families share similarities in looks and ways of installation. But Multinova has some additional features to make it multi-applicable, hence Multi in the name.

With 2 different diameters, a down and down-up version and a limited height of only 69mm, Multinova is perfect to use in different ways. Its small dimensions fit in any residential or hospitality project, as a track mounted luminaire it suits any retail environment and with a prismatic sheet for reduced glare it even adapts in office settings. Moreover, Multinova can be used on our Magnetic profiles for general lighting.

Multinova comes in our standard black or white and can also be finished in the warmer Gold Coloured to enrich its surroundings. To top it off – next to a sandblasted or prismatic optic – one can opt for a smoked sheet at the front for a more decorative touch. When turned on the disc is fully lit, when turned off a deep dark arises, ideal in combination with a Gold Coloured Multinova.

SUPER-OH! XS PIVOT

With its 25cm or 39cm diameter, the Super-Oh XS can be considered as the “little one” of the Super-Oh! family. With only 5cm height, this perfectly curved circle holds a polycarbonate, hiding a cluster of powerleds, specially designed to guarantee a uniform and perfectly balanced light output resulting in a very enjoyable diffuse lighting effect. Its flexible pivot bracket enables the user to tilt the disc up to 45° and rotate 360°. Super-Oh XS is also available for direct mounting or as a pendant.

LED LINE / INFORM

Inform OK ADM and LED Line OK ADM are two atypical light solutions in its kind. Meant to serve as general or task lighting, these linear lights can be mounted on 3 phase tracks.
Combined with spotlights for accent lighting, these linear solutions are a perfect addition to be used for example in retail or hospitality areas.
While Inform OK is available for 3 phase tracks only, LED Line OK can also be used as module on our magnetic profiles. All of them have one detail in common: the track adapter is mounted in the middle of the profile, allowing them to turn around their center with a more playful light setting as result. LED Line OK is available in Black and White, Inform OK comes in in full Black or White or in combined colours Black-Gold or White-Black.

DELTALIGHT®

HIGH PROFILE

Delta Light and MVRDV's High Profile collection is now available for purchase. A bold, colourful and conceptual range, inspired by leftover aluminium profiles. The High Profile series is a range of luminaires inspired by leftover aluminium profiles. The design takes a critical look at the manufacturing process, finding both opportunity and beauty in residual elements that would normally be cast aside.
The industrial look is softened by giving the profiles a colour dip; the series comes in pink, white, turquoise and random, adding MVRDV's well-known use of expressive colours to Delta Light's typical colour range.
The High Profile series presents a wall fixture in the shape of an arch, a freestanding model in 2 sizes (small and large) with profiles placed side by side and a cube-shaped pendant luminaire on request.

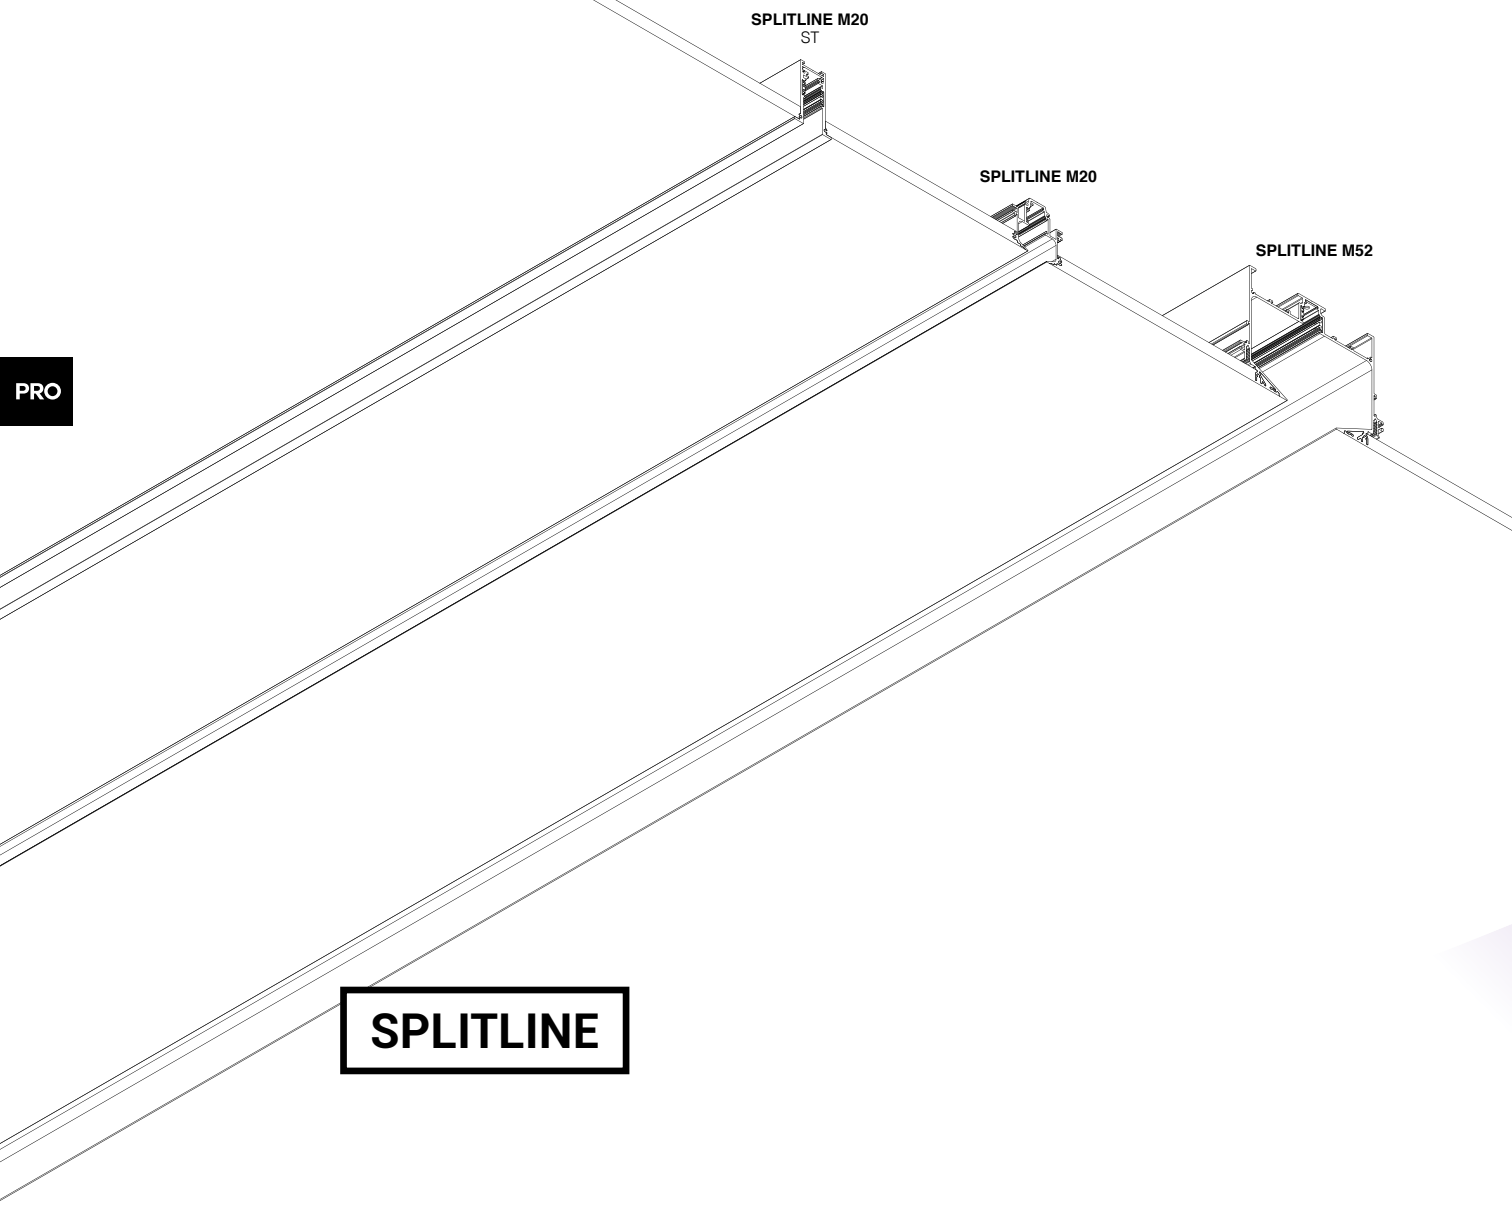
MAGNETIC



PRO

SPLITLINE

With the magnetic profiles, Delta Light takes it to the next level in the profile section. These profiles offer the highest degree of freedom and flexibility, as all modules have a magnetic fixation. Splitline M20 and M52 allow for a neat, trimless installation, while Shiftline M26 can be used for projects where surface or suspended mounting is required. To create the optimal light setting, multiple light modules are available: spot modules with different beams and lumen packages going up to 2000lm for accent lighting, linear LED lines for general or wallwash lighting and pendant modules for an elegant finish of the room. All modules can be placed toolfree into the profile and repositioned afterwards thanks to their magnetic fixation. Simply click the module into the profile and both mechanical and electrical connection are ensured. As this family of profiles is powered by 48V, Smart 48 can be used for an easy 2-wire dimming/power solution, or even wireless. For individual control of luminaires, one can opt for a DALI controlled system.

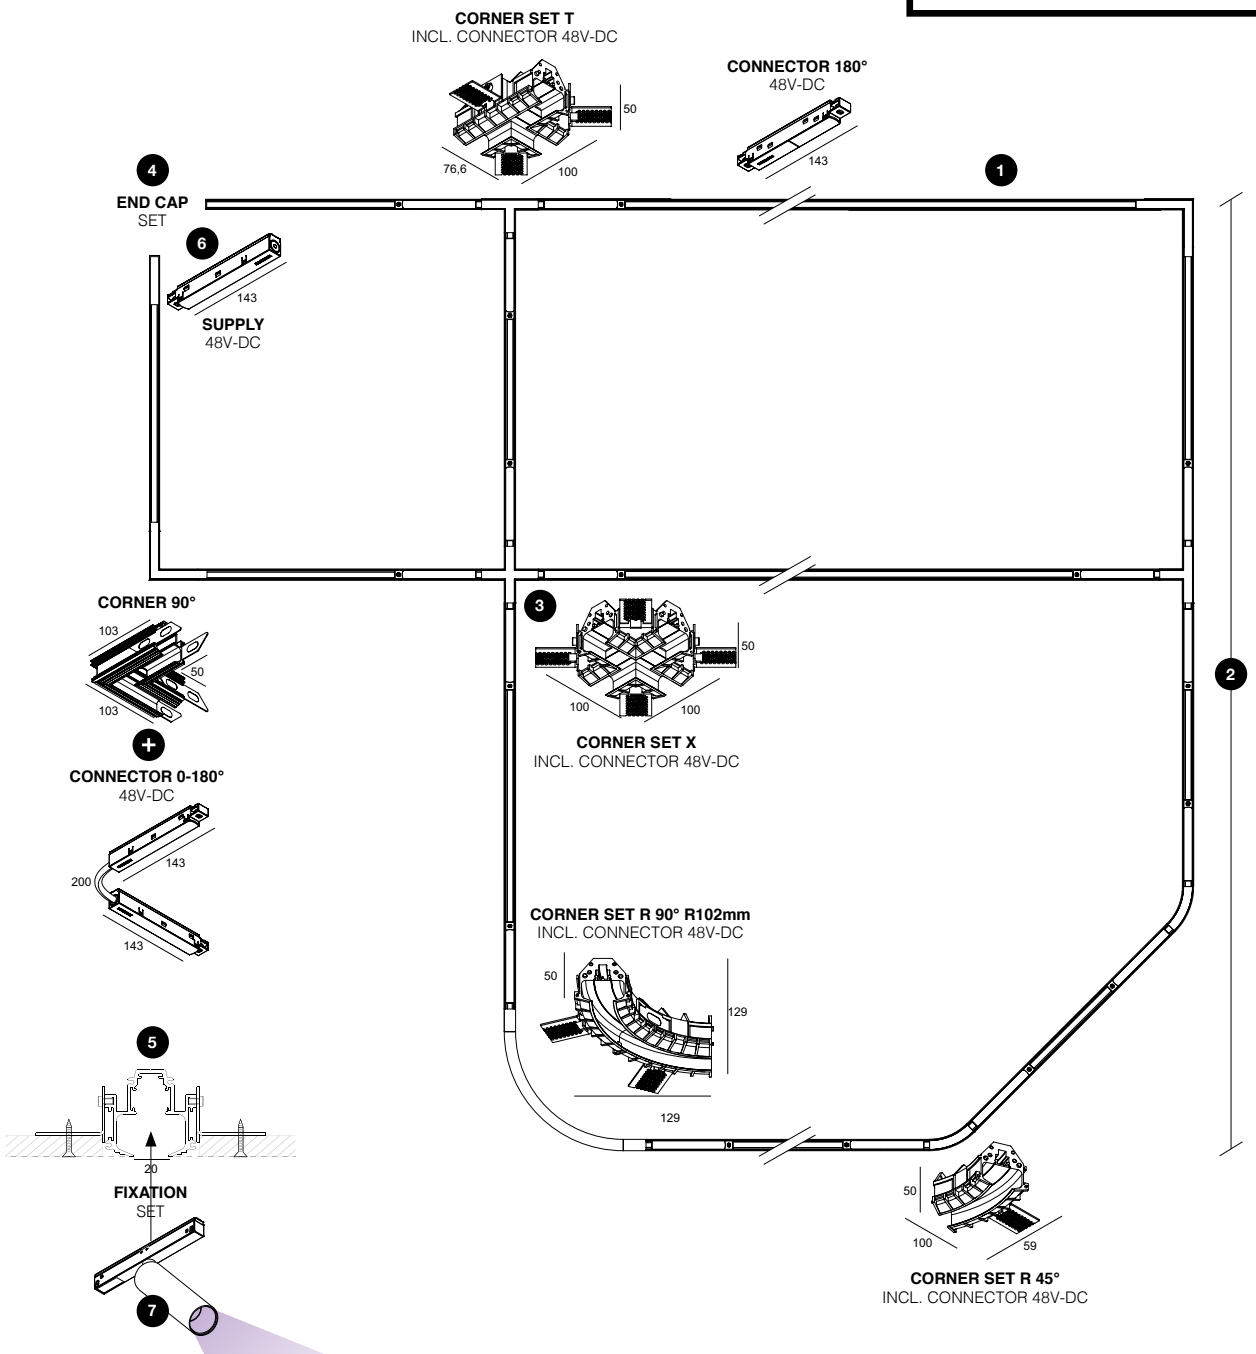
How to build your SPLITLINE

Example for Splitline M20



SPLITLINE M ▲IR

Within the **▲IR** range, Delta Light offers a set of solutions that combine light with ventilation, be it as single circular shaped light solutions or as linear kit.
This kit can serve as a stand-alone base for a double Spy spotlight or a more discrete Jum-Oh! fitting, or the kit can be used as an add-on to the Splitline M20 profile to produce a combination of light and ventilation within a slender black line in the ceiling.
By adding the SPM20 - **▲IR** Kit to the profile, the set-up can also be used for air extraction or air supply, a clever and neat combination of lighting and ventilation into 1 single black line. Be it at the end of the black line or in the middle of the construction, the **▲IR** Kit can be freely integrated into the profile, as an additional adapter set can be included in the **▲IR** Kit for easy through-wiring of the 48V.

PRO

PROFILES

B

Merging our Shifline M26 H and Tagline profiles into 1, is a perfect example of **1 + 1 = 3.**
The combination of ultimate flexibility with the fine line of light running next to it adds to possible applications for the Shiftline M26 H, as accent lights can be combind with general light without limitations.
Boost your creativity by plugging in any light module you want in the magnetic profile without interrupting the continuous light of Tagline that runs along.
The DALI-powerd 48V solution allows for an easy switch between settings:

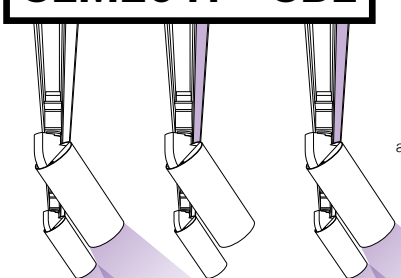
Go for **ALL ON**
and light up all light modules at the same time, including the linear Tagline

Go for **ONLY ACCENT**
to switch on the magnetic modules and create a cosy setting by highlighting the accents you prefer

Go for **ONLY GENERAL**
and use the fine line of light for a soft general light effect

Applications are unlimited, but some examples could be to use it in hallways, above the kitchen counter or the bar, as a grid in a restaurant setting, and so on.
Areas where this dynamic solution can transform the atmosphere within the room with a twist of the light.

SLM26 H + SBL



SHIFTLINE M

Unlimited flexibility is what the Shiftline M26 L Matrix system stands for. These clever add-ons to the Shiftline M26 L profiles allow you to couple multiple profiles to each other and create any structure you want. Our 2P Connector not only assures the electrical connection between two profiles, it also serves as a decorative element as its cylindrical shape is perfectly in contrast with the straight lines of the profile. Moreover, this contrast can be enhanced by choosing the Gold Coloured finish for these nodes, a bold statement where design meets functionality.
To complete the Matrix system, an additional ceiling fixation and a non electrical connector allow for unlimited creativity as one is free to connect multiple profiles any way they want. Moreover, the new Side Supply finishes it off in style as it is designed according to the looks of the 2P Connector.

SPLITLINE 14
SHIFTLINE 19

Narrow streets draw black lines through space and literally form a 'lighting path' that dialogues with the architecture of the surroundings. The Splitline 14 profile can be combined with several accent lights, depending on what the space needs, both functionally and in terms of design. Splitline 14 effortlessly integrates with architecture, upgrading the uniqueness of the room.

-

Building on the flexibility of our Superloop, adding the refinement of our 2F track and shrinking down the design to the level of our Shelfline. The result? Shiftline 19!
This miniature profile lets you combine accent lighting and decorative lighting in the shape of Uho, Spy 27 and Spy 39.
Containing 2 48V and 2 Dim conductors for individual dimming, the slender profile can easily be combined with Smart 48 and CTRL Delta to offer a quick and easy, minimalistic, wireless lighting set-up. Shiftline 19 has many application possibilities, as it dimensions are reduced to a minimum which allow a surface mounted installation that only requires a minimum of space. Be it in residential, hospitality or in retail, the different modules to apply on the Shiftline 19 track can be used for accent lighting or decorative lighting, offering multiple ways of flexibility.

The Split-it made-to-measure lighting system integrates seamlessly with architecture and demonstrates that form and functionality of lighting have definitely gone down a new path, opening new ways to integrate “lighting paths” with architecture.
The Split-it Pro is a single profile which can be used on its own, or in combination of two. When used as a single profile the Split-it concept can be used parallel with the wall. In a double set-up the Split-It Pro enables you to create a linear setting with Dimensions of your choice. The Pro version enables integration of edgeless lighting paths, either vertically or horizontally. Its 37° degree sharp edge gives walls and ceilings a `paper-thin' appearance, with no visible wires and no shadow gaps, upgrading the level of architectural detail. It offers not only new ways to give shape to any lighting need, it also gives the possibility to integrate other engineering and technological necessities.
With its linear geometry the Split-it Pro enables you to define spaces and create volumes, to show direction, frame the room and add sharp edged detail to your architecture. It can be combined with a multitude of spots available for specific and demanding lighting needs, ranging up to 2000lm and offering multiple beam optics. All tools are available to meet the specific needs of your project.

TAGLINE

The Tagline made-to-measure profile provides an ultra-minimalistic light line that integrates seamlessly with the architectural lines of your project. Limited to only 9mm the Tagline seems almost invisible, a slender line of light that cuts through space.

Available in different application versions - from trimless recessed to surface mounted, as a pendant solution or as perimeter lighting - Tagline is offered as a creative tool for architects and designers to accentuate architectural detail or characterise environments. Any space becomes distinctively elegant when the Tagline is used in a simple linear way, or can become very magical and unique when used in a composition.

CONNECT A / I

CONNECT I
Connect I balances on the edge between wall and ceiling or wall and wall, as you like. Mounted directly into the corner, this minimalistic profile generates a soft line of light on one or both sides, transforming bare corners into decorative perimeters.

CONNECT A
The delicate Connect A is designed to add subtle accents onto vertical surfaces. Emitted from a profile of only 11 by 51mm,
Connect A can be applied as a linear down-up light.

DOT.COM

Our Dot.Com family is not only limited to spotlight beam angles, it also has linear wallwashers in its range for a soft, even light effect on vertical surfaces. These come as single luminaires, as modules to fit in the magnetic profiles and as a bespoke trimless or surface mounted profile solution, perfect to adapt the light to your specific desires.

25
45

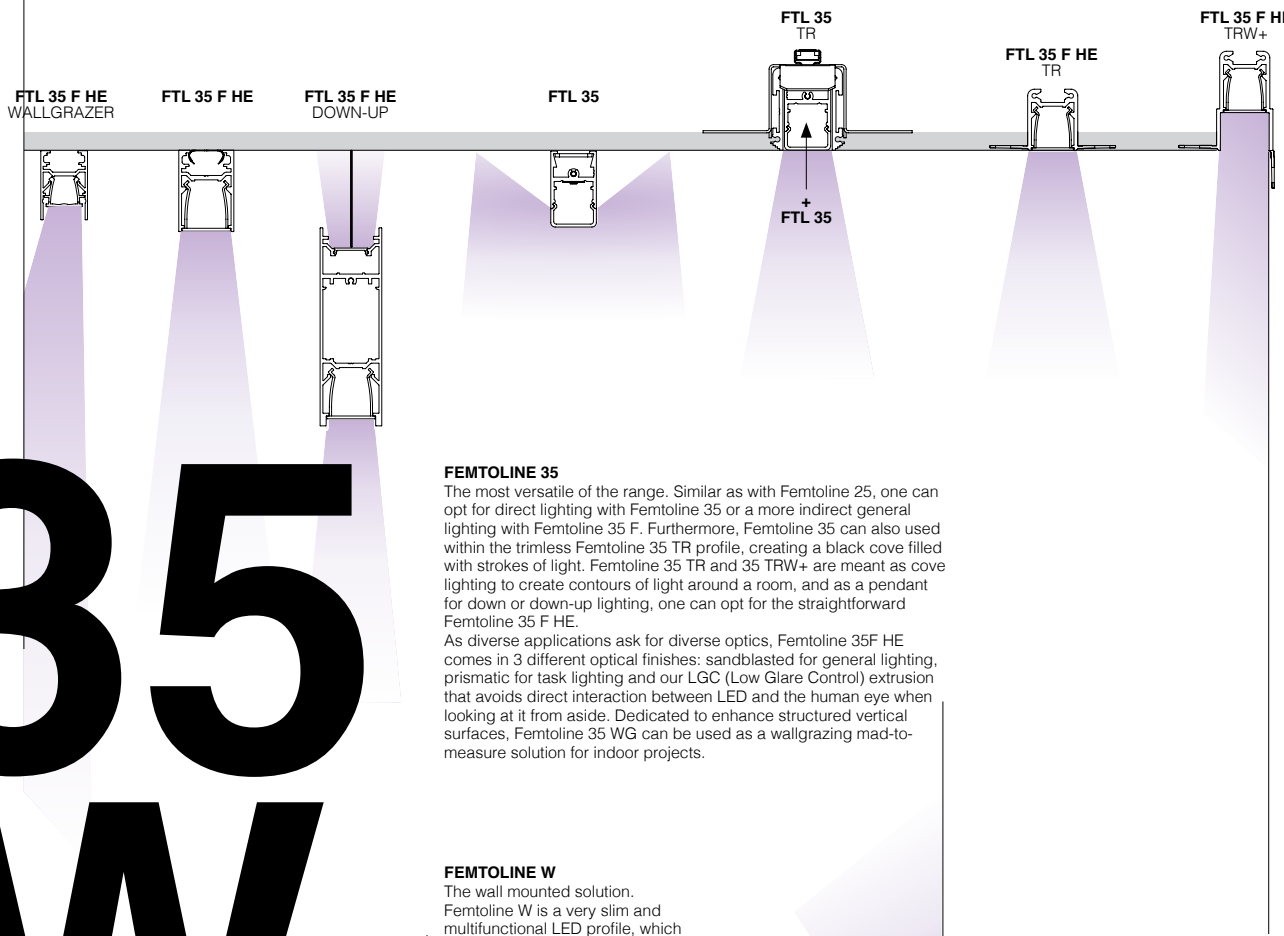
FEMTOLINE 25
The smallest of the range for surface mounted lighting solutions. Femtoline 25 offers 3 ways of general lighting: standard with a semi-recessed plexi that creates both direct and indirect lighting, Femtoline 25 F with a flush plexi for direct lighting and Femtoline 25 T with a tilted plexi to create an asymmetric light effect.

FEMTOLINE 45
The recessed solution. Femtoline 45 complements the Femtoline 25 range in applications that allow recessed installation.

Multifunctional in use, the Femtoline profiles can be used in both interior and exterior lighting concepts. The ultra-minimalistic design and extensive options in flexible RGB, tunable white, warm and cold white LED allow you to create endless lines of light, either recessed, surface or pendant mounted. The polycarbonate that closes the profile guarantees a pleasurable light effect and unifies single led dots to one continuous line.

The range of Femtoline profiles is very extensive, with each family member having its own specific design and application area. Small or wider profile design, down or down-up lighting, wall, ceiling or floor mounted, flush or tilted plexi, ... the Femtoline family offers a solution to any lighting problem.

deltalight.com/femtoline



35 W

FEMTOLINE 35
The most versatile of the range. Similar as with Femtoline 25, one can opt for direct lighting with Femtoline 35 or a more indirect general lighting with Femtoline 35 F. Furthermore, Femtoline 35 can also used within the trimless Femtoline 35 TR profile, creating a black cove filled with strokes of light. Femtoline 35 TR and 35 TRW+ are meant as cove lighting to create contours of light around a room, and as a pendant for down or down-up lighting, one can opt for the straightforward Femtoline 35 F HE.
As diverse applications ask for diverse optics, Femtoline 35F HE comes in 3 different optical finishes: sandblasted for general lighting, prismatic for task lighting and our LGC (Low Glare Control) extrusion that avoids direct interaction between LED and the human eye when looking at it from aside. Dedicated to enhance structured vertical surfaces, Femtoline 35 WG can be used as a wallgrazing mad-to-measure solution for indoor projects.

FEMTOLINE W
The wall mounted solution.
Femtoline W is a very slim and multifunctional LED profile, which can be used in both interior and exterior lighting concepts. This wall mounted profile can be used for either up- or downlight, creating a cosy wall grazing effect.

FEMTOLINE

FEMTOLINE 25

The smallest of the range for surface mounted lighting solutions. Femtoline 25 offers 3 ways of general lighting: standard with a semi-recessed plexi that creates both direct and indirect lighting, Femtoline 25 F with a flush plexi for direct lighting and Femtoline 25 T with a tilted plexi to create an asymmetric light effect.

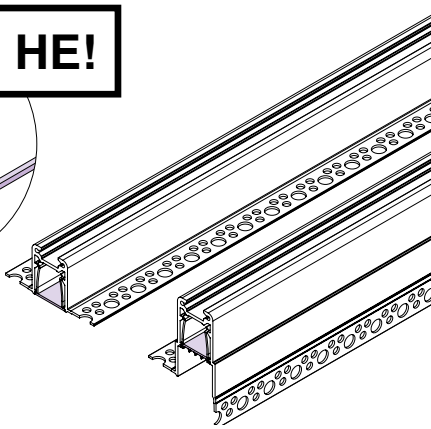
CO-EXTRUSION FOR **HIGH EFFICIENCY**

HE!



FEMTOLINE 35 F HE

The most versatile of the range. Similar as with Femtoline 25, one can opt for direct lighting with Femtoline 35 or a more indirect general lighting with Femtoline 35 F. Furthermore, Femtoline 35 can also used within the trimless Femtoline 35 TR profile, creating a black cove filled with strokes of light. Femtoline 35 TR and 35 TRW+ are meant as cove lighting to create contours of light around a room, and as a pendant for down or down-up lighting, one can opt for the straightforward Femtoline 35 F HE.
As diverse applications ask for diverse optics, Femtoline 35F HE comes in 3 different optical finishes: sandblasted for general lighting, prismatic for task lighting and our LGC (Low Glare Control) extrusion that avoids direct interaction between LED and the human eye when looking at it from aside. Dedicated to enhance structured vertical surfaces, Femtoline 35 WG can be used as a wallgrazing mad-to-measure solution for indoor projects.

FEMTOLINE 45 + WALL

FEMTOLINE 45
The recessed solution. Femtoline 45 complements the Femtoline 25 range in applications that allow recessed installation.

FEMTOLINE W
The wall mounted solution. Femtoline W is a very slim and multifunctional LED profile, which can be used in both interior and exterior lighting concepts. This wall mounted profile can be used for either up- or downlight, creating a cosy wall grazing effect.

BORDERLINE

With the Borderline profile Delta Light introduces a generation of recessed led profiles, setting standards in the indirect lighting segment. It features a remarkable trimless finishing, although easy to install and finish.

The Borderline can be used for both wall and ceiling application, enabling you to frame the room with light. Available with RGB, tunable white, warm or cold white LEDs, offering a contemporary indirect lighting solution with exceptional eye for architectural detail.

OUTLINER

Outliner defines the perimeter. It comes as single luminaire or as a bespoke profile, perfectly optimizable to any desired length. Designed as an unobtrusive linear solution, Outliner shields off the light source and gently casts its light towards the surface. As such, Outliner is ideal to serve as perimeter lighting across paths, terraces or parking lots, areas that function as passageway.

ONE AND ONLY

A peculiar profile, both functional as decorative. The design of the body allows you to have up to 5 lines of light out of 1 profile, 3 for direct and 2 for indirect lighting. The soft glow of the light along the sides of the profile makes the One-And-Only float through the air, a powerful blend of light for an eye-catching look.

MICROLINE 60 / 40

A series of slim, made-to-measure LED profiles which stand out for their versatility and clean-cut design. The Microline profiles are designed to create uninterrupted lines of light, ideal to accentuate architectural lines or be used as general lighting.

MICROLINE 40/60
The Microline 40/60 profile was created as a high efficiency replacement for the original 30/50 profile. The high-output led array is available with a dimmable power supply with 151lm/W and as a non-dimmable version delivering 167lm/W.
In addition, the 40+ features a protruding polycarbonate for extra wide light output.

Go around the corner

The made-to-measure Streamliner is a very versatile LED-focused profile family. Its multiple installation options combined with the possibility to add spots and downlights, allow Streamliner to be used in various applications. Inside, the LED array is available in 2 different output levels and can be finished with an opal or prismatic cover. The possibility to use Tunable White, emergency modules and sensors further add to the flexibility of Streamliner

Streamliner can be recessed mounted, with (Streamliner 85) or without trim (Streamliner TR), surface or pendant mounted. As a pendant version, the profile can be used with only direct light or there is also the opportunity to have it direct-indirect. To give the profile even more flexibility, also integrated downlighters and additional spots are available.

STREAMLINER TR / STREAMLINER 85
Streamliner TR and Streamliner 85 are the recessed solutions within the Streamliner range. Streamliner TR can be finished without any visible trim, while Streamliner 85 has a small trim covering the hole in the ceiling. In both cases a homogenous line of light is all you see, as the profile completely disappears into the ceiling. Fully lit corners allow you to play around with lines of light, creating unique patters that strengthen the architecture of the building.

STREAMLINER 70S / 70L
Streamliner 70S and 70L can be used for surface mounted or suspended applications, both offering the possibility to be used as a direct-indirect or purely direct line of light. With its Dimensions of 70 by 85mm, Streamliner 70S has a more minimalistic look, while Streamliner 70L (70 by 108mm) enables to hide away an emergency unit inside its body.

Want the full Delta Light experience? Have a look on our website and plunge in inspiration, application and product details.

I'm not alone. You can find me & my family members in other chapters within this Lighting Bible.

REO

The Reo collection is more than one product, it is a family which offers a solution for many lighting demands, from residential to hotel, restaurant to retail and much more. In line with this philosophy, Reo comes in single and double fixtures, round or square, orientable or fixed, in multiple finishing colours, for both indoor and outdoor use.
The design of these recessed conical spots delivers a hardly visible transition from the intense light to the ceiling, resulting in a halo-like effect, ideal to give the space an extra dimension.

B

DEEP RINGO X

The conical shaped design of the Deep Ringo fixtures and the deeper placed LED source make sure that glare is reduced to a minimum when Deep Ringo is installed in the ceiling. The small trim gives a refined touch to this elegant luminaire.

ENTERO X

The diversity within the Entero family makes it a versatile range, suitable for a multitude of applications and to fulfill various kinds of lighting needs.
Apart from interior use, Entero can also be installed in exterior settings, this to create a uniform look and feel throughout the entire project. To ensure a hassle-free answer to these harsh environments, Entero X is designed to perfection in every detail.

CARREE X

The Carree range is Delta Light's answer for easy-to-install, timeless and functional recessed spots, as it has been a Delta Light classic for many years.
This family of square recessed luminaires offers refined solutions for LED or halogen, either with or without trim.
The straight lines in the design make a contemporary spot out of Carree, not only useful in modern architecture but also in many other applications. Carree can be used throughout the entire project, as it also includes IP44 solutions for bathrooms and IP65 luminaires for outdoor use.

BOXY

What once began as a cubic luminaire is now an elaborate family of surface mounted luminaires, both cubic and cylindrical shaped. Though different in shape, still uniform in look, as both shapes have a deeper recessed LED module with a conical, coloured insert in front. While the deeper recessed LED module reduces the glare, the choice in colour creates possibilities for playful and attractive lighting solutions.
Alongside the different shapes, this family offers indoor and outdoor luminaires, a perfect solution when recessing is not an option.

SUPERNOVA XS

Supernova is an extensive range of pure geometrically formed lighting fixtures that guarantee powerful illumination and atmosphere. The range comes in different diameters and application possibilities.

With its 26 cm or 33 cm diameter, the Supernova XS (Extra Small) can be considered to be the baby in the range when it comes to size, but not when it comes to performance and skills. It only needs 6 cm of height to hide away an intense cluster of powerleds in its perfectly curved aluminium body.

OONO

How to describe Oono in one sentence?
'A soft glow of light during golden hour, at the end of a sky-blue summers day…'

That's one way. But there is more to the sophisticated Oono than just its gentle embracing glow. Built in first instance as a family of exterior products, Oono is a family of dualities.
It combines elegant looks with a warm diffused light effect. It couples the sturdy look of metal with the pureness of glass.
It unifies exterior and interior, as the range offers IP-rated solutions for outdoor with staraightforward surface mounted and pendant luminaires for indoors.
It unites a play of straight lines with perfect circular shapes. It merges black and white, by adding a touch of gold.
It brings together the shimmer of dusk with the fresh start of dawn.

STIP

With Stip, you choose for either a round or square surface mounted wall luminaire for outdoor use. The round one can be used for general lighting, while the square version has an inhouse developed lens that throws the light to both sides, generating a line of light that is ideal to enlighten a pathway.

SKOV

Skov is perfect as a guidance light, both for in- and outdoors. The luminaire stands out in slenderness, with only 32mm of thickness for a surface mounted wall application with integrated power supply.
The combination of a recessed LED array with the specific design of Skov generates visibility along the path without being obtrusive for the passer-by. The light leaving the luminaire gently falls onto the veil of Skov, revealing a soft light effect to guide you wherever the path may take you.

TIGA

A medium sized rectangular lighting fixture, delivering a pleasant up and downward light effect on your wall. As a surface mounted wall unit, Tiga is perfect for both residential use or for hospitality usage in hotels and restaurants.
Standard, Tiga creates a wide beam effect for both down- and uplight, while Tiga BS allow you to play with a combination of a wide and small beam effect within 1 luminaire.
Despite its IP65 rating for outdoor use, this unit also feels very comfortable when used indoors.

MONO II

Mono is a well-known member of the Delta Light outdoor range. It was the first outdoor wall fixture within the range that combines a LED module with a lens, resulting in a far-reaching and strongly delineated lighting effect. The Mono's timeless and sharp contoured design adds a contemporary touch to any façade.

NOCTA

As a range of full IP65 wall fixtures, Nocta is the example that form and function can be merged into one. Build around 4 types of optics, Nocta is available in a cylindrical or cubical design, both with a down or down-up light emission. The cubical version also has a wider brother with double light beams, a way to add a more decorative touch onto the wall. All of them have some functional design elements in common that define Nocta.
At the front Nocta has a raised collar to improve the visual comfort for the passer-by, while a the back the collar has a moon-shaped cut-out to allow excess water to seep out. An additional plus to this cut-out is that the light directly hits the wall Nocta is mounted onto, resulting in the perfect light effect.
Although small in size, Nocta has some installation benefits hidden away inside also: space for an integrated DALI power supply, possibility to loop through for the down-up versions and an internal connector for time-saving installation.
And to make Nocta futureproof? All individual parts can easily be disassembled, allowing an update of the LEDboard when needed.

With its 4 different light effects, Nocta offers a variety of options to the designer. A spot version for powerful, slender streaks of light, a wide flood version for a single or double V-shaped light effect, a very wide flood with a distinctive delineated output on the wall and the double shaped beams of the wider Nocta for an additional playful touch.

WALKER

Walker II splits the light open. Starting from 1 light source, Walker II is designed to guide the light into two directions to provide a double light effect on the surface below.
The light falls on the V-shaped inner part of the luminaire, breaking it open and throwing it to the front- and backside of the luminaire.
Walker II can serve as a guiding light on your wall or pathway, as it comes as a wall luminaire and as a bollard.
Different heights and multiple colour combinations
can be combined to your preference to create the perfect setting.

BACKSPACE

In many ways, Backspace II is a joy for the eye, be it by its slender design, by its pleasant light effect or by its playful colour combinations. Backspace II is designed to create a 2-way light effect on the wall, the choice to install it in a horizontal or vertical way is up to you. By mounting the light source in the front part of the luminaire, it is perfectly shielded from looking directly into the source.

Backspace II can be used for interior lighting in a white, grey or dark grey finish or for outdoor settings in grey or dark grey.

MONTUR

With Montur we offer a highly original interpretation of an archetypical concept: a light source that is contained within the framing of a 3D square or rectangular shape. The Montur is available in indoor and outdoor versions, as a ground, wall or ceiling fixture, with LED clusters or filament-LED lamps with a rustic look.
The series integrates beautifully in both country-classic and contemporary homes, and is suitable for hotels and public buildings as well.

SPY 39 W

Spy 39 W translates elegance and finesse into an outdoor wall light. Composed as a slender cylinder, Spy 39 W is available as a minimalistic down- or down-up luminaire. Despite its refined design, Spy 39 W succeeds in adding body to your exterior with its prolonged tubes and distinctive light effect.

KIX

Flexible, subtle, elegant and powerful: these are the keywords that describe the Kix perfectly. Despite its low-profile appearance, Kix excels in light output and quality, ideal for walkway lighting or other landscape applications. Kix is easy and flexible to use thanks to the adjustable head, designed to provide optimal cooling and eliminate glare.
Kix is available for installation on wall or floor, to strap around a tree or to mount in soft green areas with a pin. In addition to the more robust version of Kix, there is also a S(mall) and M(edium) version available. Kix S combines a powerled with a lens, resulting in a nice 10° light beam. All models have an IP65 rating and are available in alu grey or dark grey.

SOIREE

The Soiree range was designed to be voluminous, lightweight and transparent. Its sophisticated form creates a dense and decorative effect, filled with a warm light.

The interaction between the pure circular and rectangular forms, with the warm light sources and the symmetric configurations, triggers a dynamic tension. The Soiree takes its inspiration from many angles. From the play of light and shadow in architecture, to natural light effects, the shape of everyday objects and sculptural art.
The result is a nest of light, made of circles or rectangles, both structural and decorative, generating a seductive luminous effect.

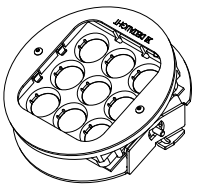
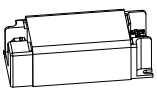
IK10

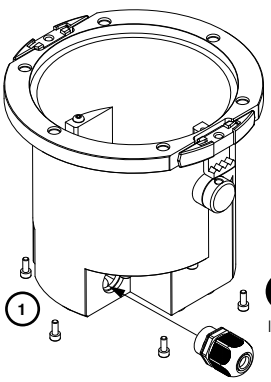
LED CASET® TECHNOLOGY



Logic 190 R is based on Delta Light's LED Caset® technology, which combines multiple LEDs with individual collimator lenses per LED to generate a clean-cut light distribution. The individual lenses create a multi-layered light distribution to generate a clean 8° or 14° beam angle. Other beam angles or other light effects are being obtained by adding microlenses in front, sculpting the light into a 26° or 47° beam angle or into a linear or wallwash effect.



Integrated (DALI) Power Supply



0-25° 360°

Fully adjustable
on-side without
opening the fixture.

IP67

Integrated moisture lock + IP68 Connector

Thanks to its multiple reflector options, Logic can be used to accentuate trees or sculptures, to light up facades or large garden features, to create a sense of depth or indicate the right direction along paths and driveways. The choice of installation – trimless or with trim – and its round or square shape allow you to match look & feel with the design of the building. Within the same family, Logic W can be used as guidance light, built into the wall.

With Logic 190 R and Logic Linear, we extend on the existing floor recessed range of Logic luminaires.
Widening the range expands the possible use from residential to more commercial applications. Logic 190 R and the linear Logic are fully adapted to these applications.

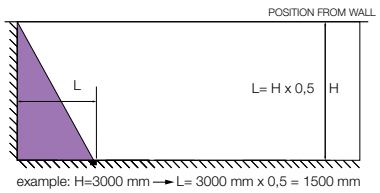
Innovation in design
Logic 190 R OK is fully adjustable on-site, without the need of opening the fixture. As such, it can be rotated 360° and tilted up to 25°, without any possible damage by ingress of water or dust. It even goes the extra mile, as it can be adjusted while installed into the floor, allowing a perfect alignment of light effect on architecture. By tightening the flange onto the housing from below, the only visible screws on top of the fixture are the ones to remove the flange in order to adjust the LED engine for an optimal light effect. A perfect merge from design and functionality, as it minimizes possible galvanic corrosion.

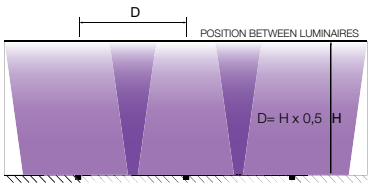
Smart design
Within Logic 190 R, we opt for a clever re-use of existing building blocks. LED engine, optics and accessories are shared components with the Frax family, a range of exterior projectors. As such we do not only create a uniform look and feel for the end-user (both in design and light effect), we also optimize the internal supply chain to build and assemble our product portfolio. Future thinking: the building blocks of Logic 190 R are designed for future updates as well, thinking for example on integration of Tunable White or RGBW LEDs, new optics or installation in new or other materials. A toolbox of smart thinking.

Quality
Durable: Logic 190 R is designed to last, be it in the choice of material, components or the way it is assembled. An integrated moisture lock prohibits incoming water from below, in-house designed gaskets avoid water ingress from above to make it full IP67, a stainless steel flange holds the 10mm thick glass to ensure an IK10 value and an integrated DALI driver makes it dimmable and adaptable to the specific needs of the project. Standard Logic 190 R comes with 0,5m of cable ad an integrated IP68-connector to facilitate a waterproof installation.Quality of light: Logic 190 R not only excels from the outside, it is the inner part that makes it shine. Precise optics that reduce unwanted spill of light, a set of individual collimator lenses to reduce glare, accessories that further refine the light or improve on visual comfort, the engine that makes a powerful lighting tool of Logic 190 R.

Family thinking
Next to the adjustable version, Logic 190 R also comes as a fix version to be used in more straight-forward set-ups. All of these available with a range of optics: 8°, 14°, 26°, 47° and wallwash, applicable. To complete the range, a linear version is available within the same design language, adding even wallgrazer options that can be used to highlight vertical structured surfaces at night. As a straightforward uplight, Logic 190 R also comes as reflector version with a single COB. Available with 3 different beam angles and a honeycomb version with improved visual comfort, the reflector version offers smooth beam projections without any unwanted disturbances.



example: H=3000 mm → L= 3000 mm x 0,5 = 1500 mm



example: H=3000 mm → D= 3000 mm x 0,5 = 1500 mm

LOGIC LINEAR

Based on the same principles as Logic 190 R, Logic Linear offers additional options in linear uplighting. As an individual projector or installed in a continuous line, these fittings are perfect to install around facades or other architectural elements. With its wallgrazing optics, Logic Linear easily lights up structured vertical surfaces to enhance the sense of depth of the structure and make them more lively.

Apart from its wallgrazing optics, Logic Linear offers 3 symmetrical beams and can be provided with a internal accessory to improve the visual comfort of the passer-by.
Opt for powder-painted aluminium front cover in Dark Grey or go for the additional benefits of the Inox cover for use in more harsh environments.
Similar to the round version, Logic Linear comes with an integrated power supply and has the IP68-connector installed on the product to facilitate the in-ground installation.

LOGIC 40
The Logic range stands for a complete family of water and shock resistant lighting fixtures. Logic 40 is the smallest of the family, a minimalistic recessed uplight with a diameter of only 40mm. With its small beam angle of 15°, it perfectly serves as an accent light to highlight any architectural aspect you want. Available with trim or as a trimless installation for an even more minimalistic look. To take care of the visual well-being, Logic 40 either comes with a micro vizor inside or as a Moon version, shielding off the light that is thrown backwards. The perfect addition to accentuate green or sculptures, to highlight façade or small garden features, to create a sense of depth or indicate the right direction along paths and driveways.

LOGIC 60
With a diameter of only 60mm, Logic 60 can easily be integrated in any landscape design, without disturbing the visual perception of it. Its smallest beam angle is ideal for highlighting, while the wallwash versions emphasize façades and bring depth into the architecture.The specific Moon version cuts of the light spill going backwards, ideal to accentuate trees or reduce the glare for passers-by.

LOGIC 90
The bigger version of Logic allows for more choice in beam angles, letting the designer be creative and play with light effect and light intensity. Similar to Logic 60 also wallwash versions are available within the bigger range to offer multiple light effects within the same design language.

KIX

Flexible, subtle, elegant and powerful: these are the keywords that describe the Kix perfectly. Despite its low-profile appearance, Kix excels in light output and quality, ideal for walkway lighting or other landscape applications. Kix is easy and flexible to use thanks to the adjustable head, designed to provide optimal cooling and eliminate glare.
Kix is available for installation on wall or floor, to strap around a tree or to mount in soft green areas with a pin. In addition to the more robust version of Kix, there is also a S(mall) and M(edium) version available. Kix S combines a powerled with a lens, resulting in a nice 10° light beam. All models have an IP65 rating and are available in alu grey or dark grey.

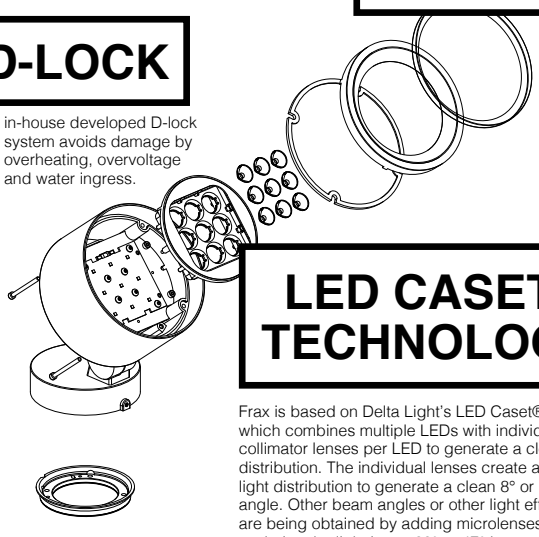
THERMALLY TOUGHENED GLASS

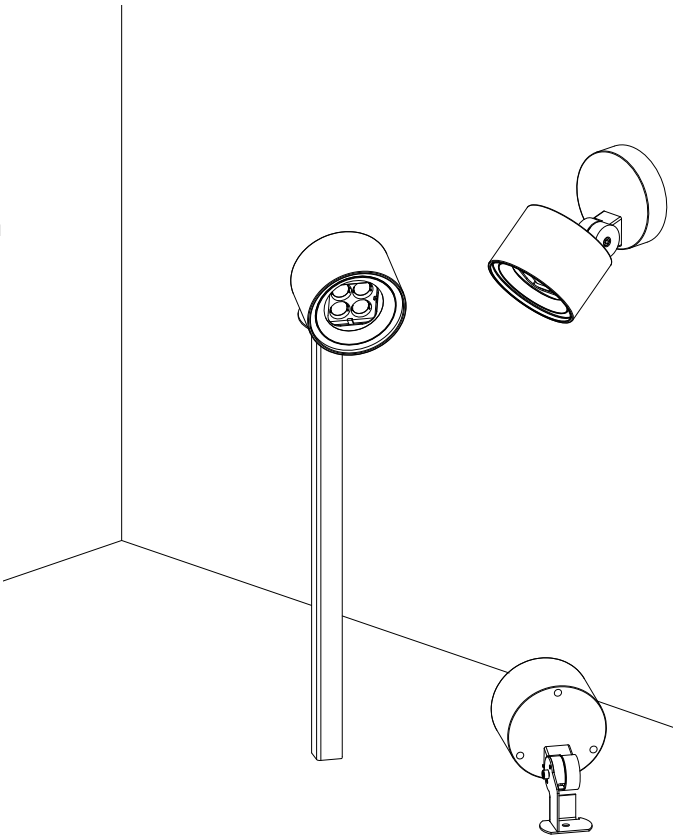
D-LOCK

in-house developed D-lock system avoids damage by overheating, overvoltage and water ingress.



LED CASET® TECHNOLOGY

Frax is based on Delta Light's LED Caset® technology, which combines multiple LEDs with individual collimator lenses per LED to generate a clean-cut light distribution. The individual lenses create a multi-layered light distribution to generate a clean 8° or 14° beam angle. Other beam angles or other light effects are being obtained by adding microlenses in front, sculpting the light into a 26° or 47° beam angle or into a linear or wallwash effect.

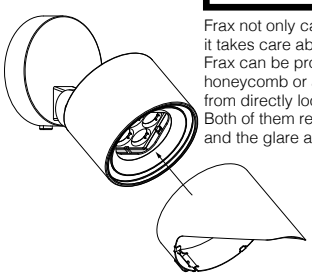


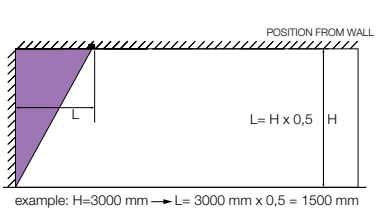
FIXATION

A multitude of options allows Frax to be installed in different ways:
Surface mounted on hard surfaces
—
On a pin in soft surfaces
—
Strapped around a tree
—
Mounted on a pole with a bracket

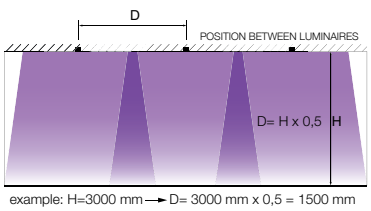
VISUAL WELL-BEING

Frax not only cares about the perfect light effect, it takes care about the passer-by as well. Frax can be provided with an additional honeycomb or a kap to reduce the possibility from directly looking into the light source. Both of them reduce any undesired light effect and the glare associated with it.





example: H=3000 mm → L= 3000 mm x 0,5 = 1500 mm



example: H=3000 mm → D= 3000 mm x 0,5 = 1500 mm

OONO

How to describe Oono in one sentence?
'A soft glow of light during golden hour, at the end of a sky-blue summers day…'

That's one way. But there is more to the sophisticated Oono than just its gentle embracing glow. Built in first instance as a family of exterior products, Oono is a family of dualities.
It combines elegant looks with a warm diffused light effect. It couples the sturdy look of metal with the pureness of glass.
It unifies exterior and interior, as the range offers IP-rated solutions for outdoor with staraightforward surface mounted and pendant luminaires for indoors.
It unites a play of straight lines with perfect circular shapes. It merges black and white, by adding a touch of gold.
It brings together the shimmer of dusk with the fresh start of dawn.

SPIX

As a projector for exterior use, Spix has many appearances. It comes as a surface mounted spotlight, as a version on pin to put in between the greenery or as a bollard with 2 or 3 light units. Like this, Spix can be used throughout a complete outdoor project, to light up trees, emphasize architecture or highlight pathways.

Although compact in size, the clever design of Spix offers a solution without any visible cabling outside of the luminaire. The hinge of the projector not only serves to tilt it into the wanted direction, it also hides away a passage for the cabling.

Uniform in design, Spix comes in 2 sizes: a smaller 10° version for accent lighting and a bigger 30° version for more general light. To shield the passerby from looking into the projector and to reduce unwanted spill light, the bigger version can be finished with a kap on the front.

B

OUTLINER

Outliner defines the perimeter. It comes as single luminaire or as a bespoke profile, perfectly optimizable to any desired length. Designed as an unobtrusive linear solution, Outliner shields off the light source and gently casts its light towards the surface. As such, Outliner is ideal to serve as perimeter lighting across paths, terraces or parking lots, areas that function as passageway.

STIEVIE

Stievie is not your typical lighting bollard. The sharp pin underneath the luminaire allows you to install it in many different ways, like a spear has been thrown into the lawn. Its linear light generates a pleasant and warm light effect, ideal to light up a sculpture or to guide a way along the light.

MONTUR

With Montur we offer a highly original interpretation of an archetypical concept: a light source that is contained within the framing of a 3D square or rectangular shape. The Montur is available in indoor and outdoor versions, as a ground, wall or ceiling fixture, with LED clusters or filament-LED lamps with a rustic look. The series integrates beautifully in both country-classic and contemporary homes, and is suitable for hotels and public buildings as well.

The Montur not only breathes new life into a classic concept, it also adds a detailed element of refinement. The sharply profiled framing in aluminium is utterly devoid of welding seams. For both the indoor and outdoor versions, there is a choice of finishing with either hand pressed transparent or opal glass. The opal glass version contains a milky, cone shaped core, with a transparent glass surface, creating a pleasantly diffused light that gives the lamp extra cachet. The indoor version of the Montur is also available as an open cube, with one or two bulbs, or in a rectangular shape with a powerful LED cluster concealed behind a protective cover in polycarbonate. By using them as outdoor fixtures, you can extend your lighting style into the garden or parking area. The outdoor versions are available in the same models as the indoor ones, but always feature a protective cover in glass or polycarbonate.
There is also a bollard version, with a choice of various heights.

ELBO

Elbo can be used as functional lighting along a path thanks to the in-house developed lens. The lens solution creates a double effect with a wide general soft glow combined with a narrow delineated beam in the middle. According to the position in the luminaire, it can create a long line of light along a pathway or it can create a linear pattern as the light is thrown forward.

WALKER

Split the light
Walker II splits the light open. Starting from 1 light source, Walker II is designed to guide the light into two directions to provide a double light effect on the surface below. The light falls on the V-shaped inner part of the luminaire, breaking it open and throwing it to the front- and backside
of the luminaire. Walker II can serve as a guiding light on your wall or pathway, as it comes as a wall luminaire and as a bollard. Different sizes, different heights and multiple colour combinations can be combined to your preference to create the perfect setting.

B

OBLIX

The Oblix light effect tops any expectation. The unique design of this bollard and the positioning of its light unit results in maximum beam spread and a powerful play of light, providing an expressive and architectural touch to your project.
Oblix has a standard width of 150mm, while Oblix S is its smaller version of only 100mm wide. With its additional floor base, Oblix F increases the contact area between the bollard and its mounting surface for a more robust installation.
As such, one can opt for Oblix F for higher impact resistant bollards as it has an IK08 rating.
By shielding of the LED from sight, Oblix avoids direct exposure and dazzle, without compromising on light output.
Oblix can be directly installed on any hard surface or - when combined with a pin - be planted in any green surrounding.
Available in multiple heights from 150mm up to 1000m, in both alu grey and dark grey finish.

STRIPER

If you are looking for a subtle floor surface light for outdoor use, the Striper might just be what you need. Due to its rather small size it is the perfect solution to light a path or driveway without disturbing the surrounding architecture or view of the nature around you. The rectangular shape of this product gives it a modern and sleek look. The combination of the powerled with a 4° LENS, results in a very long and narrow beam.

□

MONOPOL

Monopol is a bollard taking on the shape of a slender girder, rising from the ground up. Minimalistic in design, straightforward in functionality as it produces a very focused spread of light through its narrow opening at the front. Available in 2 sizes, 2 colors and perfect to create a play of light on paths or driveways.

BAZIL

Bazil is characterized by an aluminum disc which holds a ring of leds, supported by a softly curved body that serves as a reflector, combining design and functionality.
The result is a pleasant, soft light that poses no risk of dazzling.
The large and more robust model fits perfectly around office buildings, public buildings, hotels and grand houses. Bazil comes in different colour combinations,
including Delta Light's unique dark grey.

POLESANO

Polesano, a collaboration in product design between Dean Skira and Delta Light.
The goal was to develop a new concept in lighting instruments, designed specifically for urban settings, be that a pedestrian pathway, roadway, park, square, façade or landscape. It needed to provide maximum flexibility for the designer to combine different optical characteristics, whilst keeping the same aesthetic for the entire system, regardless
of the area.

The result is Polesano, offering modularity and flexibility, and providing personal involvement for the designer to meet specific functional and aesthetical needs of the project. Future developments can be integrating video surveillance, Wi-Fi, speakers or other IoT units.

POLESANO
POLE

POLESANO

Conventional street lights primarily illuminate horizontal areas. However, this is not sufficient to meet the needs of today's landscape design and illuminate with impact.
The flexibility of the Polesano enables to illuminate vertically and horizontally, as the double axis in the connection box allows a 355° rotation from the luminaire vs. the pole and a 180° rotation from the luminaire itself.
In this way, any possible set-up can be achieved.

B

Within the Polesano Range, some standard configurations are offered, both for the pole and the luminaire. A pole height of 4m or 6m can be chosen, either with anchor or base as installation possibilities. Both heights allow you to have up to 4 luminaires to be mounted in standard combinations, as shown below.
All luminars are DALI dimmable. The drivers used are DALI-2.

Lighting is still a fast-changing business due to the evolution in led.
On the following pages we inform you on some typical characteristics of led and show you the possibilities on how to connect, switch and dim power supplies in a correct way. Further in this chapter you can find specific technical information on options, requirements and accessories.

OPTIONS
Depending on the material in which the luminaire will be installed, options can be used for the installation of a luminaire but are not necessary.

REQUIREMENTS
Needed for a proper installation of the luminaire.

ACCESSORIES
To modify the beam of the luminaire.

Technical

WIRELESS CONTROL

Delta Light introduces **CTRL DELTA**, enabling you to control and manage a selection of LED luminaires via mobile devices (Apple or Android). In essence, all dimmable luminaires can be wireless controlled, as long as the required components are either integrated or installed externally. Throughout this Lighting Bible®, the symbols below show if wireless control is possible with the luminaire in question.

CTRL DELTA INSIDE
WIRELESS CONTROL IS STANDARD AND THE LUMINAIRE HAS THE REQUIRED COMPONENT INTEGRATED.

CTRL DELTA READY
LUMINAIRE CAN BE WIRELESS CONTROLLED, BUT REQUIRES AN EXTERNAL COMPONENT. IN ORDER TO ENSURE THE BEST INTERACTION, THIS COMPONENT NEEDS TO BE INSTALLED NEARBY THE LUMINAIRE. INSTALLATION OPTIONS NEED TO BE CHECKED ACCORDING TO THE NATURE OF THE LUMINAIRE AND THE INSTALLATION POSSIBILITIES.

Easy to install. You don't need any new wiring, switches, devices or networks.
Plug in the lighting fixture and pair it with your smartphone or tablet.
No other configurations needed.

Easy to use. You can control your lights with an intuitive and visual user interface on your smartphone or tablet.

Easy to enjoy. With a tap on your smartphone you can set the ambience.
With the Casambi App you can control your luminaires individual or in groups.

How to in 5 easy steps
1. Order your desired CTRL DELTA unit (not standard included with luminaire)
2. Install the CTRL DELTA unit
3. Download the Casambi App in the App or Play Store.
4. Find your CTRL DELTA unit in the Casambi app, using Bluetooth.
5. Take a picture of your room and place the light controls upon the related pictures. Now you can visually manage your luminaires directly through the picture.

SMART 48 PATENTED

SMART 48: Dimming 48V luminaires or profiles by 2 wires! It collects the power from the 48V power supply and combines it with a DALI, 1-10V or Touch Dim input and sends it to the 48V converter in the luminaire. With the Dimmable Modulator 48V-DC DIM9, dimming can be done by only using 2 wires for both power and dimming. Or dimming can be done wireless, by choosing for the Wireless Dimmable Modulator 48V-DC.

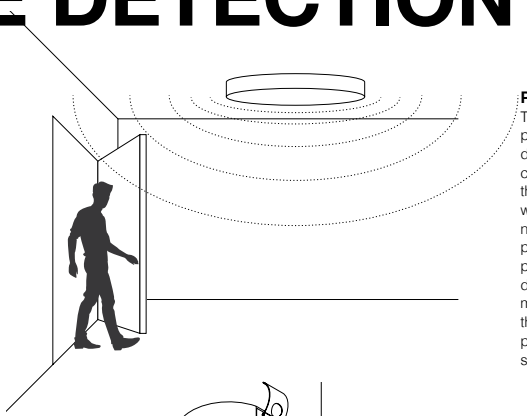
PRESENCE DETECTION

PRESENCE DETECTION
By adding a presence detection sensor to a luminaire, energy consumption can be reduced while user comfort is raised. The sensor can switch luminaires on or off, according to the occupation in the room and the specific needs and wishes of the user. Time between departure and lights off (hold time), plus the detection zone, can be programmed to match the needs of your project.
The presence detection sensor is particular for the Supernova Line range and needs to be installed inside the luminaire, avoiding visible sensors and resulting in clean ceilings and walls.



PRESENCE + DAYLIGHT DETECTION
Together with presence detection, also daylight detection provides energy savings in spaces with a lot of incoming daylight. The sensor captures the amount of daylight coming into the room and changes the light output of the luminaire according to the specific level of lux that is wanted in the room. In this way, luminaires will provide nearly no light on bright, sunny days and will be at full power on cloudy, grey days. To be used in the Streamliner profile, this sensor combines both presence and daylight detection, to allow you to reduce energy consumption to a minimum. For proper functioning of the daylight detection, this sensor needs to be visible and comes in an additional profile module. A remote control can be used to change the settings to your preference.

LED

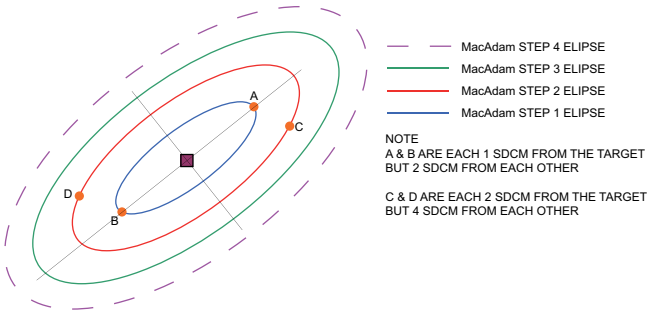
At Delta Light®, we follow the evolution in LED at close range. What appears to be similar quality at first sight, can be totally different when looking at some of the underlying characteristics. These characteristics, like binning, risk factor, thermal management, degradation in luminous flux are part of the DNA of the Light Emitting Diode. These aspects determine the lifespan and the quality of the LED. For this matter, Delta Light® assures it only selects qualitative LEDs from qualitative manufacturers. High quality design cannot be made without high quality components.

COLOUR BINNING

No 2 LEDs are the same. When LEDs are produced, they vary in light output and in colour temperature, even when they are produced in the same batch. These differences may be small, but they do influence the quality of the LED. That is why manufacturers sort the LEDs, according to these performances, in different 'bins'. By reducing the number of bins to choose from, quality increases as performances are closer to each other.

MACADAM STEP

The differences in colour temperature between LEDs can be measured by looking at the MacAdam ellipses in Standard Deviation of Colour Matching (SDCM), according to the CIE 1931 Standard. This system looks at the ability of the human eye to perceive colour differences and ranks it on a scale from 0 to 10. Within 1 MacAdam ellipse a colour difference is not noticeable to the human eye under any condition. From 1 to 3 ellipses it is very difficult for the human eye to notice any difference in colour, meaning that up to 3 MacAdam ellipses all LEDs are very homogeneous when it comes to colour temperature.



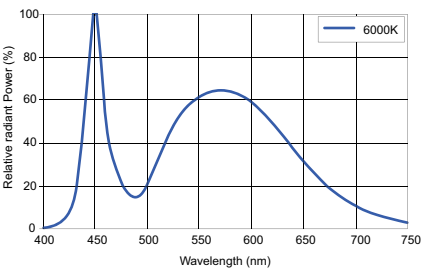
RISK FACTOR

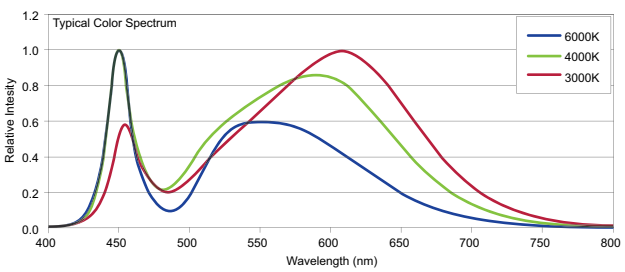
The European standard for photo biological safety EN 62471 describes a measuring method to determine whether a lamp or luminaire carries a risk of eye and skin damage. LED light contains almost no light from the ultraviolet or infrared spectrum, and therefore is not dangerous to the skin.
It does however provide a high peak in the blue spectrum which, when looking into a bright light source (for a long period of time), may result in irreversible damage to the retina, the so-called the Blue Light Hazard.

Whether the risk is real, depends on several factors: luminance of the LED, colour temperature, but also light distribution and distance to the luminaire play an important role. When a LED is placed in a luminaire, it is located behind a lens, reflector or diffuser, thus levelling off the luminance.

To allow users to estimate the risk, the standard EN 62471 determines that lamps and luminaries must be divided into four risk groups:
- Risk group 0 ("exempt" group): this means that there is no danger, even with unlimited viewing of the light source.
- Risk group 1: The risk is limited, no more than 10.000 seconds of viewing is allowed (just under 3 hours).
- Risk group 2: up to 100 seconds of viewing is allowed.
- Risk group 3: up to 0.25 seconds of viewing is allowed. This is shorter than the natural aversion reflex of the eye.

For light sources of risk group 3, protective measures are always needed. For the other groups, it depends on the application. If the light sources belong in group 2 or 3, then this must be indicated.

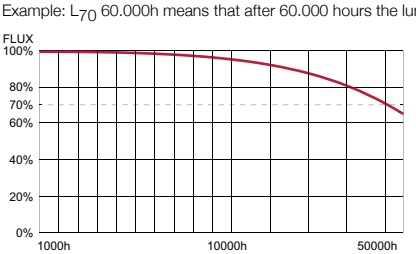




LED LIFESPAN LM-80 – TM-21

Conventional light sources mostly burn out before a serious loss of light output is noticeable. As the lifetime of LEDs exceeds the lifetime of conventional light sources, light output degrades over time before burning out. This degradation in luminous flux can be measured according to the L value and the operating period of time:
- L value shows the percentage of luminous flux regarding the initial luminous flux over a period of time.
- The operating period of time, expressed in hours.

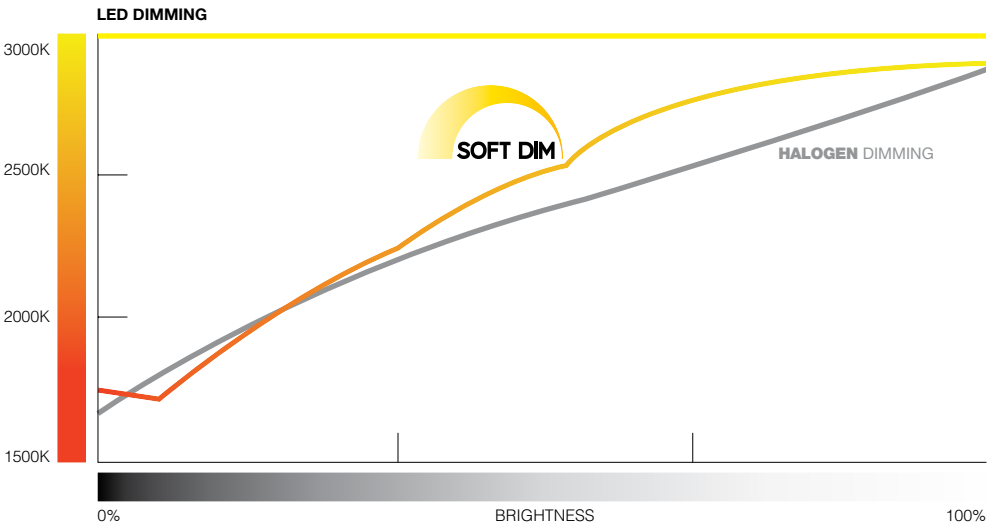
Example: L_{70} 60.000h means that after 60.000 hours the luminous flux will be at least 70% of the original luminous flux.

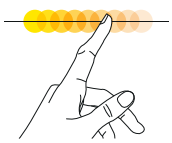


TEC

SOFT DIM

Soft Dim LED technology replicates the dimming behaviour of a conventional lamp where the colour temperature increases in warmth as it's dimmed. This is achieved through the use of specially selected LEDs of different colour temperatures and power types from premium chip manufacturers. Consistency is ensured without complexity with the use of specific and precise LED selection. The LED's selected have colour tolerances that are tighter than 3 SDCM ensuring module-to-module accuracy.
The Soft Dim technology is incorporated in familiar Delta Light product families such as the Reo, Haloscan, iMax, Deep Ringo, Carree, Spy family, Tweeter and Minigrid. Also available in some of Delta Light's 48V Solutions such as Superloop MDL & Magnetic Profiles Splitline / Shiftline M.





SOFT DIM

HUMAN CENTRIC LIGHTING

Since its creation, DL has embraced a continuous innovation process to integrate the latest technological developments towards fixtures characterized by good colour consistency, glare mitigation, design and aesthetics. These aspects satisfy the functionality of the lighting installation and create a pleasant ambient to affect the emotions of the end-user in a positive way. So far, the impact of these aspects were considered only for the visual task. Supernova Tunable White, with integrated Human Centric Light (HCL), also impacts the circadian rhythm.

The circadian clock regulates processes such as the melatonin secretion - a hormone responsible for the sleep – and our concentration and level of alertness. Unfortunately, the change in the working places towards indoor spaces isolates us from the natural stimulus of sunlight and therefore our circadian clock needs to be stimulated by artificial lighting emulating the daylight cycle.
The last years DL has been working on a lighting management system to enhance the well-being of the end-users in the frame of the HCL paradigm. Besides the in-house research and developments, joint efforts with universities and other research centers like the Light & Lighting laboratory from the KU Leuven, Attentia and the health care center of Roeselare allow us to provide better solutions aiming to address specific niches of application such as offices, schools, nursing homes, hotels and residences.
One of these solutions is Supernova Tunable White with integrated HCL, a system that changes its colour temperature during the day according to the graph shown above. This solution includes CTRL Delta and lets you control the luminaires easily with the touch of your smart device.

All the technical parameters for LED-apply to the entire module.
In view of the complex manufacturing process for light emitting diodes (LED),
the typical values given in this **Lighting Bible®** are merely
statistical values that do not necessarily correspond to the actual
technical parameters of an individual product;
individual products may vary from the typical values. For most accurate info,
please consult: **deltalight.com/ledspecs.pdf**

All lumen values in this catalogue are related to the Led units.
For more info on the lumen values of the products
please visit our website **deltalight.com**

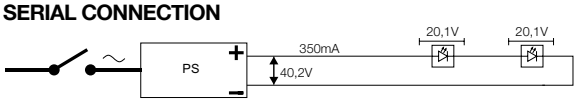
DO'S & DON'TS

PLAY.DELTALIGHT.COM/CONNECTLEDS

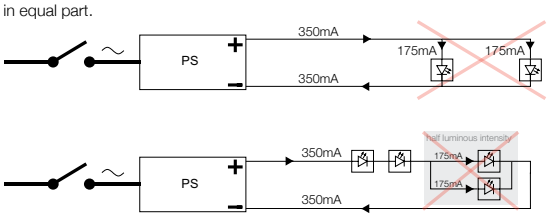
CONNECTION

CORRECT CONNECTION: SERIAL CONNECTION



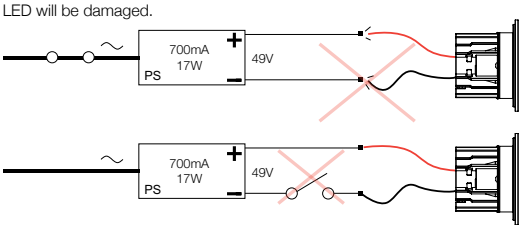
WRONG CONNECTION: PARALLEL CONNECTION

Depending on the number of fixtures the LED modules will function at half (2 LED's), one third (3 LED's) the luminous intensity. Moreover, due to different forward voltages the current will not split in equal part.



WRONG CONNECTION: TESTING OF LED MODULES ON SWITCHED ON POWER SUPPLY

Risk for an output voltage that exceeds the max for the LED.
A power supply that is switched on has max output on the secundary side (eg. 49V). The LED in eg. a Reo 3030 is 7W works at 350mA and 20,1V.
49V is far too high for the Reo 3030 >>
LED will be damaged.



WRONG POWER SUPPLY:

Question:
How many Reo (7W) luminaires can be connected to power supply 300 90 914?
7W x 4 = 28W >>> max **power** of 300 90 914 = 35W >>> **OK**
4 x 20,1V = 80,4V >>> max **voltage** of 300 90 914 = 72V >>> **NOT OK**

Answer:
3 x Reo (7W) luminaires can be connected to power supply 300 90 914

Therefore: **always consult the matrix on FOLD-OUT!**

Electrical devices are sensitive for excessive voltage peaks.
Especially outdoor power lines are subject to direct and indirect lightning discharges. Also in industrial or semi-industrial area's the powerlines can be subject to high switching spikes. Therefore Deltalight strongly advices to use proper power line surge protection. Our AC surge protectors are to be installed on the primary side of led power supplies and the DC types on the secondary side. Both as close as possible to the device they have to protect.

EMERGENCY OPERATION 1h
CHARGING TIME 24h

IP20

Emergency units are battery powered units that come into force in case of general power failure.

In this Lighting Bible we offer emergency units specifically for LED luminaires. Thanks to the battery, a luminaire can keep emitting an amount of light, equal to a percentage of the nominal value when the luminaire is emitting at full power. This percentage is determined by the emergency unit and is known as the Ballast-Lumen Factor (BLF).

We are Delta Light

Delta Light's success is built on the determination, passion, and talent of our global team.
We hereby thank all of our colleagues and partners for their invaluable work. The lighting industry is evolving and growing at very high speed.

As a family run business, we have a personal stake in keeping our clients happy. As such we are committed to make a difference through original designs, outstanding service levels, an eye for detail and personal contact and striving to be the best in all we do.

Our product development process is based on a combination of creativity and technological innovation. It is our mission to present to the world a portfolio of lighting solutions that satisfy people's desires and needs, realise peoples visions, whilst creating a perfect symbiosis between architecture, function and atmosphere.

Jan, Peter & Paul Ameloot

For additional product information, technical downloads, project inspiration, contact details and much more… please go to
deltalight.com

Whether you access the site via your desktop computer or mobile device, an inspiring platform opens up with up-to-date content, exciting images, extensive product information, upgraded user experience… all in a fresh look & feel.

The **product search engine** will quickly guide you to the right product page, where you can download 3D files, Revit files, product data sheets, manual, IES files and drawings.

The **My Delta Light Toolbox**
helps you to quickly collect, save, download and share images and product information. Start creating your personal shortlists and share them with your partner, client, architect, electrical installer or other people involved in your project. You are free to use this feature without login, or you can register to save and edit multiple pinlists.

If you are looking for a contact person in your region or country please go to

* **A. EXAMPLE CURRENT CONTROLLED POWER SUPPLY**

1.LED Power Supply MAINS DIM (FE)
21012 0298
Min.1 / Max 2 ENTERO SMALL WALLWASH can be connected (220-240V)
Max 1 ENTERO SMALL WALLWASH can be connected (110V)
(Power Supply fits through cut out of 55mm)

2.LED Power Supply 1-10V DIM
300 90 124
Min.1 / Max 2 ENTERO SMALL WALLWASH can be connected (220-240V)
Max 1 ENTERO SMALL WALLWASH can be connected (110V)
Dimming by 1-10V
(Power Supply fits through cut out of 55mm)

3.LED Power Supply DALI DIM
300 90 125
Min.1 / Max 2 ENTERO SMALL WALLWASH can be connected (220-240V)
Max 1 ENTERO SMALL WALLWASH can be connected (110V)
Dimming by DALI
(Power Supply fits through cut out of 55mm)

B. EXAMPLE POWER CONVERTOR (FULL INFO PAG TEC 24-25)

1.LED Power Convertor 48V-DC to 350mA/15W DIM5
300 48 350 ED5 + 48V-DC Power Supply *
Max.2 ENTERO SMALL WALLWASH can be connected
Dimming by DALI

* Minimum power 48V-DC Power Supply =
(number of luminaires x power of luminaire) + 15%
