Key Information

Colour Temperature & Lumens

Colour temperature/Kelvin (K) is a measurement of the warmth or coolness of light.

The look and feel of a space can be greatly affected by colour temperature. Therefore, it is important to choose the right colour temperature based on the mood you want to create.

Based on the (K) numbered scale, the higher the colour temperature, the cooler, more energising light will be.

A lower colour temperature will produce a warmer, more relaxing glow. The colour temperature (K) should be considered carefully to satisfy a room's desired purpose, mood and style.

Lumens Explained: (lm) are a measure of the total amount of visible light (to the human eye) from a lamp or light source. The higher the lumen the "brighter" the lamp will appear.

NOTE: All Kelvins and Lumen outputs (raw data) are quoted with a tolerance of 10%

Candle Light 1800K	Warm White 2700K-3000K	Daylight 6500K

COLLECTION

2026

About Us

80 years of rooted heritage, crafted for the present. At LUX&BELLE we honour the legacy of our parent company, established in 1945. What began as a vision of opulence now lives on through curated lighting pieces that blur the line between tradition and innovation. Each fixture reflects our signature blend of classical materials and contemporary allure, shaped by the worlds of fashion, art and architectural design. This is lighting not just as utility, but as expression. Step into a collection where every glow tells a story and elegance is always within reach.

the 2025 Project Collection is a toolkit crafted for lighting specifiers. Tailored to optimise lighting performance, it features architecturally designed solutions that align perfectly with project requirements. By seamlessly integrating technical innovation with creative vision, we deliver solutions that elevate both interior and exterior spaces.

useful information

GU10/Mini GU10 items

GU10 products are designed to fit a standard GU10 lamp length of 53mm. The specified minimum recess depth dimensions for our products are based on this standard length, ensuring clear installation guidelines. If a product is designed for a longer GU10 lamp length, this will be noted in the key features on the product page.

GU10 lamps are not included.

Mini GU10 lamps share the same lamp cap as standard GU10s. However, mini GU10 lamps have a smaller face diameter of only 35mm, making them ideal for applications requiring a smaller luminaire body.

Mini GU10 lamps are not included but can be purchased separately in a choice of CCT. See pg. 219 for more details.

Dimming

All dimmable products are compatible with mains leading and/or trailing edge dimming. We test all our dimmable products for compatibility with Varilight Pro-dimmer modules. We cannot guarantee the compatibility of other leading / trailing edge dimmers.

Lightsource/Luminaire lumens

Lightsource lumens measure the total light emitted directly from the light source, i.e. the LED PCB, without accounting for any losses due to the fixture's design. Luminaire lumens, on the other hand, measure the total light output from the complete luminaire, including any losses caused by the luminaire body, lenses, reflectors, or diffusers. When the product has a replaceable LED lightsource, the lightsource lumens are quoted on each page.

Colour Rendering Index (CRI)

All products have a minimum CRI >80. CRI>90 products are indicated on the page.

Living finishes

Living finishes change over time. Anodised finishes may appear slightly darker after a period of 3 years due to continued oxidation of the surface of the product.

Warranty

All products are manufactured and inspected in order to meet the technical and quality standards demanded by the market. These come with a standard 5-year warranty out of the box.

We understand that coastal environments can subject products to unique challenges, such as saltwater exposure and extreme weather conditions, our 5-year warranty includes all outdoor products with this icon, when used in locations up to 1km from the coast.

Products with this icon are limited stock items.

Use solid plaster trimless lighting...

when you have an already plastered wall or ceiling, and you're not planning to skim the surface again.

After the product installed it is a decorator's job to infill the gap with a flexible filler / caulk, sand to a smooth finish and paint the surface of the ceiling, including the interior of the fitting.

Use metal trimless lighting...

when you are installing into a wall or ceiling that has yet to be skimmed, or will be reskimmed.

After the metal frame is installed in the wall or ceiling the plasterer skims the surface with a 3mm layer of plaster skim. The frames have a 3mm lip for the plasterer to skim up to.
