

XY180

is a 3-piece collection of luminaires designed by OMA. The collection was born from a fascination with point, line and surface; key characters in the discourse of architecture.

OMA is an international practice founded by Rem Koolhaas, operating within the traditional boundaries of architecture and urbanism. AMO, a research and design studio, applies architectural thinking to domains beyond.

OMA

is led by nine partners and maintains offices in Rotterdam, New York, Beijing, Hong Kong, Doha, Dubai and Perth. The company is known for landmark projects worldwide such as Fondazione Prada in Milan, Garage Museum of Contemporary Art in Moscow, Faena District in Miami and CCTV Headquarters in Beijing amongst other.

The XY180 design process is managed by OMA partner Ippolito Pestellini Laparelli, and architects Antonio Barone & Laurence Bolhaar.

oma.eu

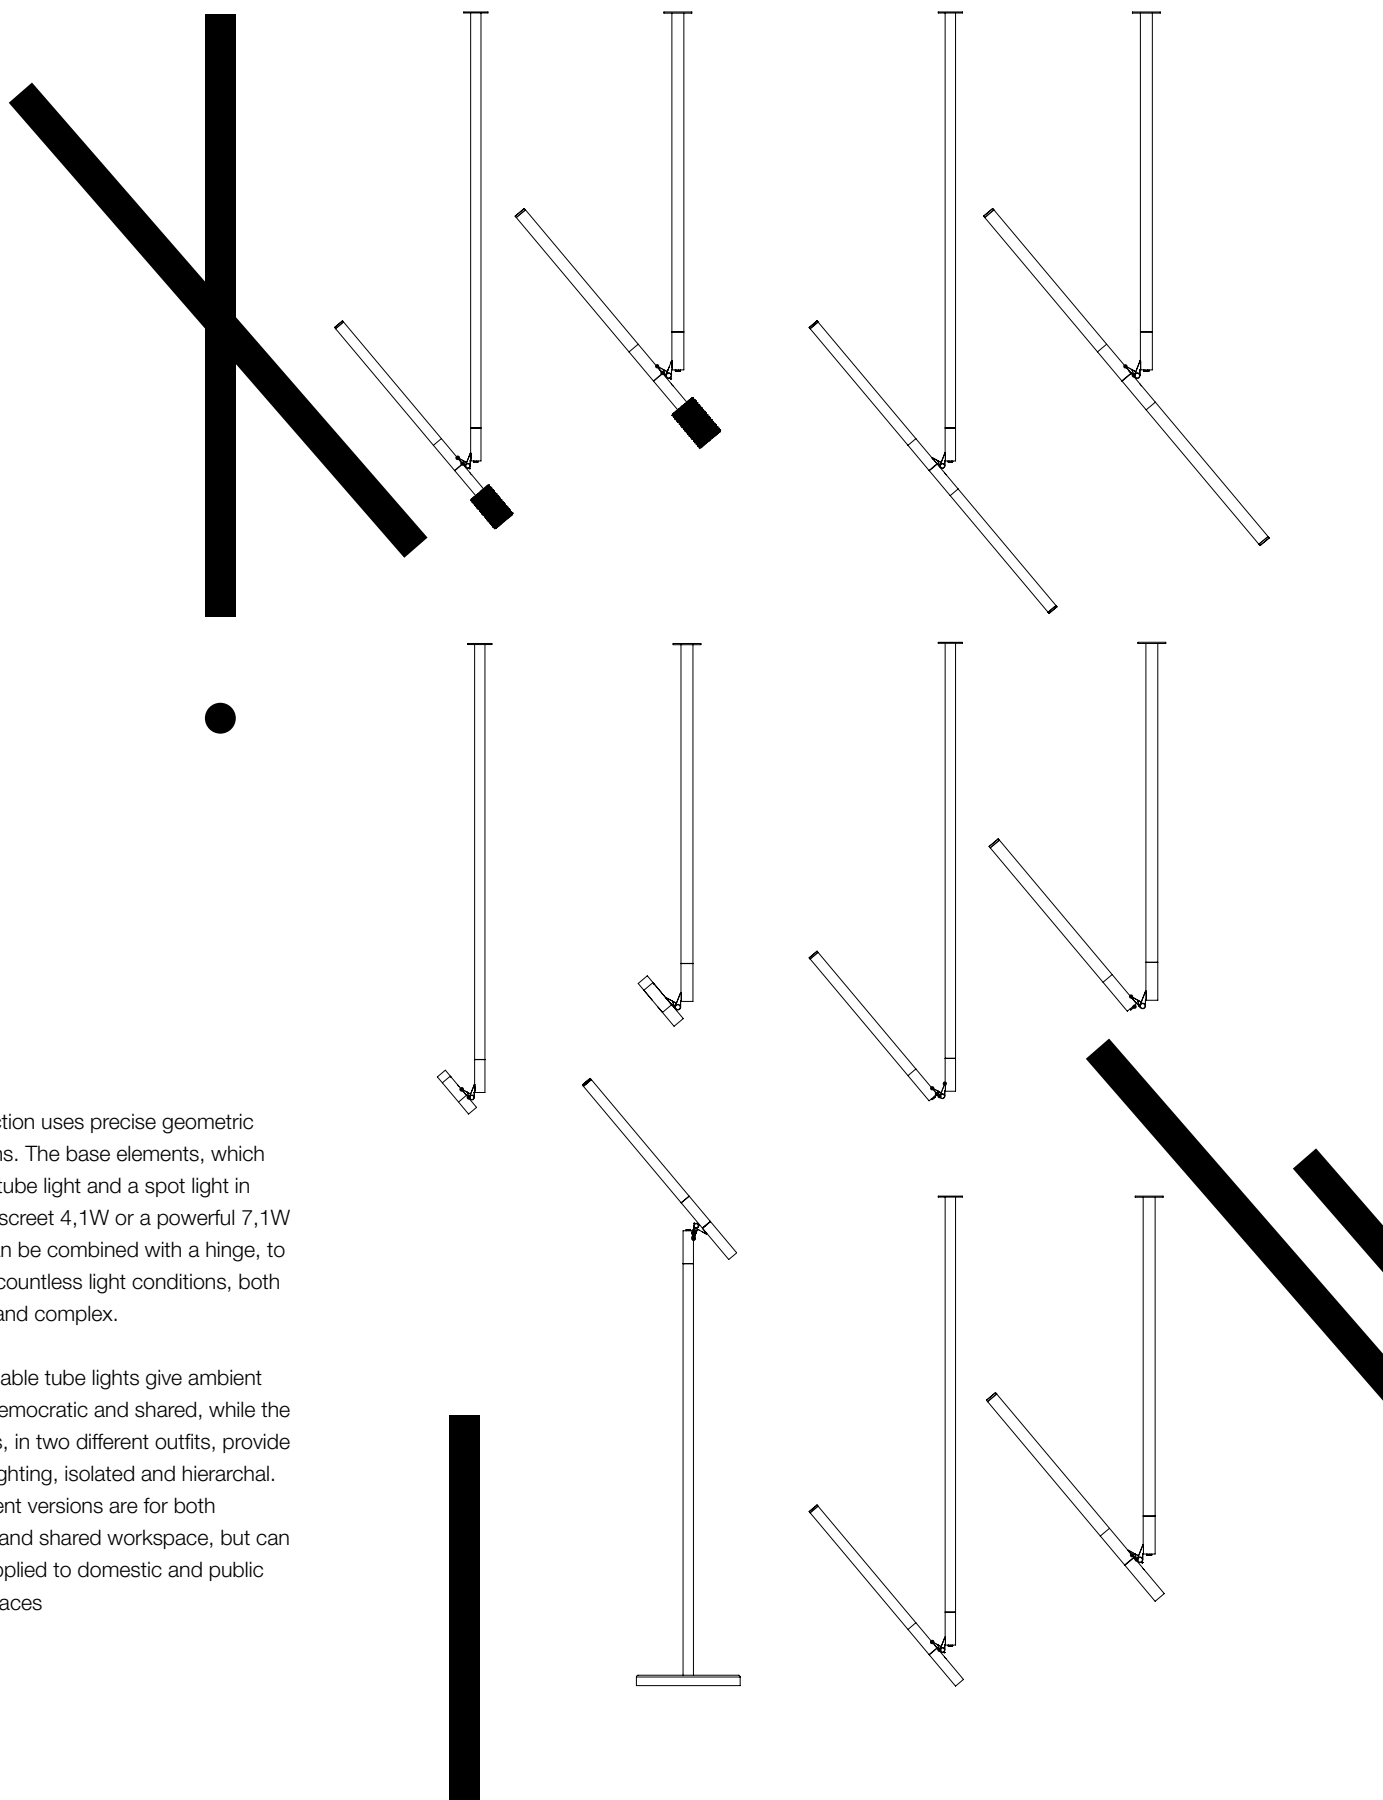

— The design ambition was to step away from a luminaire that simply relied on shape, towards a design focused on performance—

OMA

The collection uses precise geometric proportions. The base elements, which include a tube light and a spot light in either a discreet 4,1W or a powerful 7,1W caliber, can be combined with a hinge, to generate countless light conditions, both essential and complex.

The dimmable tube lights give ambient lighting, democratic and shared, while the spot lights, in two different outfits, provide focused lighting, isolated and hierarchal. The different versions are for both individual and shared workspace, but can also be applied to domestic and public interior spaces

By exposing the luminaire and giving it the ability to hinge, the fixture becomes the main feature as it is able to shift and generate into multiple configurations; a product that can contribute to the manifestation of space, not only by the light it emits, but also by its physical presence.

The degree of adjustability that comes from the hinging fixture, is an agent of opportunism. It has the ability to suit, and remain relevant to the ever-changing demands of a lighting system in a space.

— Through the choreography of movement and multiplication, the luminaire can manipulate three-dimensional space, entering the domain of architectural space.

The modularity of XY180 allows each module or set of modules to be reconfigured and change its impact on the surrounding space—

OMA

**— This spot is
a sort of ‘jolly’
plugin to hack
the otherwise
strong linearity
of the system.
It boosts
the presence of
the fixture when
it is used as
a stand-alone,
and not in serial
repetition—**

In 2018 the XY180 collection will be extended with the bold and versatile “Punk” spot light. Its extravagant shape adds a powerful element to the line and upgrades the design statement of its environment.

CTRL DELTA

WIRELESS CONTROL

An advanced lighting control solution based on the Bluetooth low energy standard. BLE is a state-of-the-art wireless technology. It is the only low power wireless technology available in all modern smartphones, tablets and smartwatches. This makes it the only mainstream power technology in the world. It is future proof and it is available now to control your lights.

For more information and technical info please go to
www.deltalight.com/CTRLDELTA

The CTRL Delta technologie creates an easy and user friendly platform for a contemporary lighting installation.
